List of Figures	xi
List of Tables	xxiii
Preface to first edition	xxvii
Preface to second edition	xxix
Acknowledgements	xxxii
Part 1 The periglacial domain	1
Chapter 1 Introduction	3
1.1 The periglacial concept	3
1.2 Periglacial processes	5
1.3 The growth of periglacial geomorphology	7
Further reading	8
Discussion topics	9
Chapter 2 Periglacial landscapes	10
2.1 Introduction	10
2.2 Proglacial, paraglacial or periglacial?	10
2.3 Never-glaciated periglacial terrain	13
2.4 Implications	18
Further reading	18
Discussion topics	19
Chapter 3 Periglacial climates	20
3.1 Boundary conditions	20
3.2 Periglacial climates	20
3.3 Periglacial climates and the cryosphere	26
Further reading	28
Discussion topics	28
Part 2 Present-day periglacial environments	29
Chapter 4 Frost action and cryogenic weathering	31
4.1 Introduction	31
4.2 The freezing process	31

4.3	Ice segregation and frost heave	33
4.4	Freezing and thawing indices	34
4.5	The ground temperature regime	35
4.6	Frost cracking	39
4.7	Cryogenic weathering	40
4.8	Salt weathering	45
4.9	Solution and karstification	47
	Further reading	50
	Discussion topics	50
Chapter 5	Permafrost	51
5.1	Historical perspective	51
5.2	Moisture in permafrost	52
5.3	Geothermal regimes of permafrost	54
5.4	Distribution of permafrost	56
5.5	Permafrost and terrain conditions	65
5.6	Surface features of permafrost	69
5.7	Permafrost hydrology	73
	Further reading	78
	Discussion topics	79
Chapter 6	Ground ice	80
6.1	Ground ice description	80
6.2	Types and amounts of ground ice	87
6.3	Ice wedges	89
6.4	Massive ice and massive icy bodies	98
6.5	Ice-cored mounds and pingos	101
	Further reading	108
	Discussion topics	108
Chapter 7	Thermokarst	109
7.1	Causes of thermokarst	109
7.2	Thermokarst subsidence and thermal erosion	112
7.3	Alas thermokarst relief	113
7.4	Ice-wedge thermokarst terrain	117
7.5	Retrogressive thaw slumps	119
7.6	Thaw lakes and depressions	121
7.7	Fluvio-thermal erosion	124
7.8	Thermokarst involutions	126
	Further reading	126
	Discussion topics	126
Chapter 8	The active layer	127
8.1	Definition	127
8.2	Thermal regime of the active layer	127

8.3	Unfrozen water in freezing and frozen soils	130
8.4	Frost heave	131
8.5	Thaw consolidation	139
8.6	Thermally induced mass displacement	139
8.7	Cryoturbation and patterned ground	140
8.8	Active layer hydraulics and mud boils	147
8.9	Conclusions	148
	Further reading	148
	Discussion topics	148
Chapter 9	Hillslope processes	149
9.1	Mass wasting	149
9.2	Solifluction	151
9.3	Slopewash	157
9.4	Rapid mass movement	161
9.5	Frozen slopes	167
	Further reading	169
	Discussion topics	169
Chapter 10	Slope morphology	170
10.1	The free-face model	170
10.2	Rectilinear debris-mantled slopes	172
10.3	Convexo-concavo debris-mantled slopes	172
10.4	Pediment-like forms	175
10.5	Stepped profiles	177
10.6	Slope evolution	180
10.7	General reflections	183
	Further reading	183
	Discussion topics	184
Chapter 11	Fluvial processes and landforms	185
11.1	Introduction	185
11.2	Major rivers	186
11.3	Channel hydrology	186
11.4	Basin hydrology	190
11.5	Sediment flow, surface transport and denudation	194
11.6	Fluvio-thermal erosion	197
11.7	Channel morphology	198
11.8	Valley asymmetry	202
	Further reading	203
	Discussion topics	203
Chapter 12	Wind action and coastal processes	204
12.1	The role of wind	204
12.2	Loess-like silt	206
12.3	Sand dunes and sand sheets	207

12.4	Coastal processes	209
12.5	Cold-climate deltas	213
	Further reading	214
	Discussion topics	214
Part 3	Pleistocene periglacial environments	215
Chapter 13	Pleistocene periglacial conditions	217
13.1	Introduction	217
13.2	The time scale and climatic fluctuations	217
13.3	Geomorphic considerations	221
13.4	Problems of reconstruction	224
13.5	Extent of late Pleistocene periglacial conditions	226
	Further reading	231
	Discussion topics	232
Chapter 14	Relict periglacial phenomena	233
14.1	Introduction	233
14.2	Perennial or seasonal frost?	234
14.3	Evidence for frost action	235
14.4	Evidence for frozen ground	242
14.5	Pleistocene frost fissures	243
14.6	Frost mounds	249
14.7	Thermokarst forms and structures	253
	Further reading	256
	Discussion topics	256
Chapter 15	Pleistocene wind action, tundra rivers and periglacial landscape modification	257
15.1	Wind action	257
15.2	Tundra rivers	262
15.3	Asymmetrical valleys	264
15.4	Periglacial landscape modification	264
15.5	Summary	276
	Further reading	276
	Discussion topics	277
Part 4	Applied periglacial geomorphology	279
Chapter 16	Geotechnical and engineering aspects	281
16.1	Introduction	281
16.2	Human-induced thermokarst and terrain disturbance	281
16.3	Engineering and construction problems	285
16.4	Hydrological problems	291

	Further reading	294
	Discussion topics	294
Chapter 17	Global change and periglacial environments	295
	17.1 Global change and cold regions	295
	17.2 Evidence from the present day	296
	17.3 Future responses	298
	Further reading	304
	Discussion topics	304
	References	305
	Index	335
