

THE HISTORY OF CARTOGRAPHY

Praise for the *History of Cartography* series

"An important scholarly enterprise, the *History of Cartography* . . . is the most ambitious overview of map making ever undertaken. . . . People come to know the world the way they come to map it—through their perceptions of how its elements are connected and of how they should move among them. This is precisely what the series is attempting by situating the map at the heart of cultural life and revealing its relationship to society, science and religion. . . . It is trying to define a new set of relationships between maps and the physical world that involve more than geometric correspondence. It is in essence a new map of human attempts to chart the world."

Edward Rothstein, *New York Times*

"The *History's* basic premise is that maps are different, as are cultures. Its purpose is to display the richness of artifacts, and it has done so magnificently and with exemplary thoroughness."

Yi-Fu Tuan, *Natural History*

"A major scholarly publishing achievement. . . . We will learn much not only about maps, but about how and why and with what consequences civilizations have apprehended, expanded, and utilized the potential of maps."

Josef W. Konvitz, *Isis*

"It is permitted to few scholars both to extend the boundaries of their field of study and to redefine it as a discipline. Yet that is precisely what the *History* as a whole is doing."

Paul Wheatley, *Imago Mundi*

"The *History of Cartography* project is an astounding example of intellectual range and creativity. It is expanding our understanding of maps and the societies and cultures that produced them. The individual volumes are magisterial in tone, full of fascination, and extremely well produced."

Jeremy Black, *History*
