Preface	1
I. Theory	3
1. Probability Theory	5
1.1. Probability	5
1.1.1. Formalization of probability	6
1.1.2. Conditional Probability and Bayes' Formula	7
1.1.3. Independent Events	7
1.2. Random Variable	8
1.2.1. Random Vector	8
1.2.2. Marginal Distribution	9
1.2.3. Conditional Distribution	9
1.2.4. Bayes' Theorem for Probability Densities	10
1.2.5. Independent Random Variables	11
1.2.6. Transformation of Variables	11
1.3. Expected Values and Variances	12
1.4. Covariance Matrices	14
1.5. Characteristic Function	15
1.6. Central Limit Theorem	17
1.7. Often Used Univariate Distributions	19
1.7.1. Normal Distribution	19
1.7.2. Gamma Distribution	19
1.7.3. χ^2 Distribution	20
1.7.4. Fisher Distribution	21
1.7.5. Student's t -Distribution	22
1.8. Multivariate Normal Distribution	22
1.8.1. Ellipses of Constant Probability	23
2. Parameter Estimation in Linear Models	25
2.1. Gauss-Markoff Model	25
2.1.1. Method of Least Squares	26

2.1.2.	Maximum-Likelihood Method	27
2.1.3.	Best Linear Unbiased Estimator	28
2.1.4.	Variance of Unit Weight (Reference Variance)	29
2.1.5.	Solution Summary	32
2.1.6.	Decorrelation of Measurements	33
2.1.7.	Parameter Transformation	34
2.1.8.	Stability of the Normal Equation System	35
2.1.9.	Parameter Pre-Elimination	36
2.1.10.	Sequential Adjustment	36
2.1.11.	Kalman Filter	38
2.1.12.	Filter Approach in Sequential Adjustment	40
2.1.13.	Gauss-Markoff Model with Constraints	41
2.1.14.	Estimation of Group Variances	46
2.2.	Generalized Linear Models	47
2.2.1.	Regression Model	47
2.2.2.	Mixed Model	49
2.2.3.	Model of the Adjustment with Condition Equations	50
2.2.4.	Adjustment with Condition Equations and Parameters	51
2.3.	Bayesian Approach to the Adjustment	52
2.4.	Robust Estimators	54
3.	Hypothesis Testing and Interval Estimation	57
3.1.	Distributions Based on Normally Distributed Observations	58
3.2.	Test of Hypothesis	60
3.2.1.	Tests for the Variance of Unit Weight	61
3.2.2.	Likelihood Ratio Test	63
3.3.	Interval Estimation	65
3.4.	Outlier Detection	67
4.	Regression and Correlation Analysis	69
4.1.	Linear Regression	69
4.2.	Correlation Analysis	71
II.	Applications	73
5.	Probability Theory	75
5.1.	Random Event	75
5.2.	Probability	76
5.2.1.	Conditional Probability, Independent Events	79
5.3.	Random Variable	81

5.3.1.	Probability Distribution, Cumulative Distribution Function	81
5.3.2.	Discrete Random Variable	83
5.3.3.	Continuous Random Variable	84
5.4.	Transformation of a Random Variable	85
5.5.	Characteristics of a Random Variable	87
5.6.	Often Used Univariate Distributions	90
5.6.1.	Binomial Distribution	90
5.6.2.	Uniform Distribution	92
5.6.3.	Normal Distribution	93
5.6.4.	χ^2 Distribution	95
5.6.5.	Fisher Distribution	96
5.6.6.	Student's t -Distribution	96
5.7.	Random Vector	97
5.7.1.	Transformation of a Random Vector	99
5.8.	Characteristics of a Random Vector	100
6.	Parameter Estimation in Linear Models	105
6.1.	Gauss-Markoff Model	105
6.1.1.	Adjustment steps	105
6.1.2.	Examples	107
6.2.	Model of Adjustment with Condition Equations	121
6.3.	GNU Gama	124
7.	Hypothesis Testing and Interval Estimation	125
7.1.	One-sample Analysis for Normal Distribution	130
7.2.	Two-samples Analysis for Normal Distribution	131
7.3.	Non-parametric Tests	134
7.3.1.	Mann-Whitney U Test	134
7.3.2.	Wilcoxon Signed-Rank Test	136
7.4.	χ^2 Goodness-of-fit Test	137
Appendix		140
A. Matrix Algebra		143
B. Fourier transform		153
Index		156
