

CONTENTS

LIST OF FIGURES	ix
LIST OF TABLES	xi
PROLOGUE	xiii
INTRODUCTION	xv
PART I FOUNDATIONS	1
1 Entering the 'Matrix Laboratory'	3
1.1 OLS in MATLAB: 'Hello, world!'	5
1.2 The Beauty of Functions	8
1.3 A Simple Utility Function	13
1.4 Review and Exercises	17
2 The Agent Optimizes	20
2.1 Profit Maximization	20
2.2 Utility Maximization	23
2.3 Simulating Economic Models	27
2.4 Review and Exercises	30
3 The Economist Optimizes	31
3.1 Maximum Likelihood	31
3.2 Generalized Method of Moments	34
3.3 Review and Exercises	38
PART II DISCRETE CHOICE	39
4 Discrete Multinomial Choice	41
4.1 Binary Logit	42
4.2 Multinomial Logit	48
4.3 Multinomial Probit	52
4.4 Review and Exercises	60
5 Discrete Games	62
5.1 A Simple Cournot Game	62
5.2 A Discrete Bayesian Game	69
5.3 Review and Exercises	79

PART III DYNAMICS	81
6 Dynamic Choice on a Finite Horizon	83
6.1 Direct Attack	83
6.2 Dynamic Programming	90
6.3 Memoization	94
6.4 Stochastic Dynamic Programming	95
6.5 Estimating Finite Horizon Models	99
6.6 Review and Exercises	102
7 Dynamic Choice on an Infinite Horizon	105
7.1 Value Function Iteration	106
7.2 Policy Function Iteration	113
7.3 Estimating Infinite Horizon Models	116
7.4 Review and Exercises	117
PART IV NONPARAMETRIC METHODS	123
8 Nonparametric Regression	125
8.1 Parametric Versus Nonparametric Approaches	125
8.2 Kernel Regression	128
8.3 Cross Validation	140
8.4 Local Linear Regression	145
8.5 Review and Exercises	147
9 Semiparametric Methods	150
9.1 Multivariate Kernel Regression	151
9.2 Dimension Reduction	155
9.3 Partially Linear Models	156
9.4 Single Index Models	160
9.5 Review and Exercises	166
PART V SPEED	169
10 Speeding Things Up . . .	171
10.1 Introduction	171
10.2 Clever Coding	171

10.3 Parallel Computing	179
10.4 Parallel Computing with the GPU	181
10.5 Other Tricks	185
11 ...and Slowing Things Down	186
BIBLIOGRAPHY	189
INDEX	193
