

Advances in Spatial Science

This series of books is dedicated to reporting on recent advances in spatial science. It contains scientific studies focusing on spatial phenomena, utilising theoretical frameworks, analytical methods, and empirical procedures specifically designed for spatial analysis. The series brings together innovative spatial research utilising concepts, perspectives, and methods with a relevance to both basic science and policy making. The aim is to present advances in spatial science to an informed readership in universities, research organisations, and policy-making institutions throughout the world.

The type of material considered for publication in the series includes:

- Monographs of theoretical and applied research in spatial science;
- State-of-the-art volumes in areas of basic research;
- Reports of innovative theories and methods in spatial science;
- Tightly edited reports from specially organised research seminars.

Manuscripts must be prepared in accordance with the guide lines for authors and editors that may be obtained from Springer-Verlag. Manuscripts considered for the series will be reviewed by independent experts to ensure their originality, scientific level, and international policy relevance.

Table of Contents

Preface	VII
1 Introduction	1
1.1 Scientific Visualization.....	2
1.2 What Is Spatial Autocorrelation?.....	3
1.3 Selected Visualization Tools: An Overview.....	6
1.3.1 Graphical Portrayals of Spatial Autocorrelation.....	8
1.4 The Sample Georeferenced Datasets.....	12
1.4.1 Selected Interval/Ratio Datasets.....	14
1.4.2 Selected Counts Datasets.....	23
1.4.3 Selected Binomial Datasets.....	28
2 Salient Properties of Geographic Connectivity Underlying Spatial Autocorrelation	33
2.1 Eigenfunctions Associated with Geographic Connectivity Matrices.....	35
2.1.1 Eigenvalue Decompositions.....	36
2.1.2 Eigenvectors Associated with Geographic Connectivity Matrices.....	38
2.1.3 The Maximum MC Value (MC_{max}).....	38
2.1.4 Moments of Eigenvalue Distributions.....	41
2.2 Generalized Eigenvalue Frequency Distributions.....	46
2.2.1 The Extreme Eigenvalues of Matrices C and W	46
2.2.2 Spectrum Results for Matrices C and W	48
2.2.3 Spectrum Results for Matrix $(\mathbf{I} - \mathbf{11}^T/n)\mathbf{C}(\mathbf{I} - \mathbf{11}^T/n)$	51
2.3 The Auto-Gaussian Jacobian Term Normalizing Factor.....	53
2.3.1 Simplification of the Auto-Gaussian Jacobian Term Based upon Matrix W for a Regular Square Tessellation and the Rook's Definition of Connectivity.....	56
2.4 Eigenfunctions Associated with the GR.....	58
2.5 Remarks and Discussion.....	60
3 Sampling Distributions Associated with Spatial Autocorrelation	65
3.1 Samples as Random Permutations of Values across Locations on a Map: Randomization.....	66

3.2	Simple Random Samples at Each Location on a Map: Unconstrained Selection	69
3.3	Samples as Ordered Random Drawings from a Parent Frequency Distribution: Extending the Permutation Perspective	70
3.3.1	The Sampling Distribution for MC	71
3.3.2	The Distribution of $\hat{\rho}$ for an Auto-normal SAR Model	72
3.4	Samples as Outcomes of a Multivariate Drawing: Extending the Simple Random Sampling Perspective	74
3.4.1	The Auto-normal Model: ML Estimation	74
3.4.2	The Auto-logistic/binomial Model	76
3.4.3	Embedding Spatial Autocorrelation through the Mean Response	81
3.5	Effective Sample Size	82
3.5.1	Estimates Based upon a Single Mean Response	83
3.5.2	Estimates Based upon Multiple Mean Responses	84
3.5.3	Estimates Based upon a Difference of Means for Correlated (Paired) Samples	86
3.5.4	Relationships between Effective Sample Size and the Configuration of Sample Points	87
3.6.	Remarks and Discussion	88
4	Spatial Filtering	91
4.1	Eigenvector-based Spatial Filtering	92
4.1.1	Map Patterns Depicted by Eigenvectors of Matrix $(\mathbf{I} - \rho \mathbf{C})^T(\mathbf{I} - \rho \mathbf{C})$	92
4.1.2	Similarities with Conventional PCA	93
4.1.3	Orthogonality and Uncorrelatedness of the Eigenvectors	103
4.1.4	Linear Combinations of Eigenvectors of Matrix $(\mathbf{I} - \mathbf{1}\mathbf{1}^T/n)\mathbf{C}(\mathbf{I} - \mathbf{1}\mathbf{1}^T/n)$	105
4.2	Coefficients for Single and Linear Combinations of Distinct Map Patterns	107
4.2.1	Decomposition of Regressor and Regressand Attribute Variables	108
4.2.2	The Sampling Distributions of $\bar{y}$ and r	110
4.3	Eigenvector Selection Criteria	113
4.3.1	The Auto-normal Model	113
4.3.2	The Auto-logistic/binomial Model	114
4.3.3	The Auto-Poisson Model	118
4.3.4	The Case of Negative Spatial Autocorrelation	119
4.4	Regression Analysis: Standard Errors Based upon Simulation Experiments and Resampling	121
4.4.1	Simulating Error for Georeferenced Data	121
4.4.2	Bootstrapping Georeferenced Data	123
4.5	The MC Local Statistic and Illuminating Diagnostics	125
4.5.1	The MC_i s	126
4.5.2	Diagnostics Based upon Eigenvectors of Matrix $(\mathbf{I} - \mathbf{1}\mathbf{1}^T/n)\mathbf{C}(\mathbf{I} - \mathbf{1}\mathbf{1}^T/n)$	126
4.6	Remarks and Discussion	128

5	Spatial Filtering Applications: Selected Interval/Ratio Datasets.....	131
5.1	Geographic Distributions of Settlement Size in Peru.....	131
5.2	The Geographic Distribution of Lyme Disease in Georgia.....	135
5.3	The Geographic Distribution of Biomass in the High Peak District.....	140
5.4	The Geographic Distribution of Agricultural and Topographic Variables in Puerto Rico	143
5.5	Remarks and Discussion	148
5.5.1	Relationship between the SAR and Eigenvector Spatial Filtering Specifications	149
5.5.2	Computing Back-transformations	150
6	Spatial Filtering Applications: Selected Counts Datasets	153
6.1	Geographic Distributions of Settlement Counts in Pennsylvania	154
6.2	The Geographic Distribution of Farms in Loíza, Puerto Rico	160
6.3	The Geographic Distribution of Volcanoes in Uganda.....	163
6.4	The Geographic Distribution of Cholera Deaths in London	164
6.5	The Geographic Distribution of Drumlins in Ireland.....	167
6.6	Remarks and Discussion	172
7	Spatial Filtering Applications: Selected Percentage Datasets	177
7.1	The Geographic Distribution of the Presence/Absence of Plant Disease in an Agricultural Field	178
7.2	The Geographic Distribution of Plant Disease in an Agricultural Field.....	180
7.3	The Geographic Distribution of Blood Group A in Eire.....	182
7.4	The Geographic Distribution of Urbanization across the Island of Puerto Rico	184
7.5	Remarks and Discussion	188
8	Concluding Comments	193
8.1	Spatial Filtering versus Spatial Autoregression	194
8.2	Some Numerical Issues in Spatial Filtering	195
8.2.1	Covariation of Spatial Filter and SAR Spatial Autocorrelation Measures	195
8.2.2	Exploding Georeferenced Data with a Spatial Filter When Maps Have Holes or Gaps: Estimating Missing Data Values.....	196
8.2.3	Rotation and Theoretical Eigenvectors Given by Theorem 2.5 for Regular Square Tessellations Forming Rectangular Regions	199
8.2.4	Effective Sample Size Revisited	202
8.3	Stepwise Selection of Eigenvectors for an Auto-Poisson Model.....	205
8.4	Binomial and Poisson Overdispersion	207
8.5	Future Research: What Next?	208
	List of Symbols	211
	List of Tables	219
