LIST OF SYMBOLS	XV
PREFACE	XIX
A SET THEORY	1
1 Basic Concepts of Set Theory	3
1.1 The concept of a set	3
1.2 Specification of sets	4
1.3 Set-theoretic identity and cardinality	8
1.4 Subsets	10
1.5 Power sets	11
1.6 Union and intersection	11
1.7 Difference and complement	15
1.8 Set-theoretic equalities	17
Exercises	23
2 Relations and Functions	27
2.1 Ordered pairs and Cartesian products	27
2.2 Relations	28
2.3 Functions	30
2.4 Composition	33
Exercises	36
3 Properties of Relations	39
3.1 Reflexivity, symmetry, transitivity, and connectedness	39

3.2	Diagrams of relations	43
3.3	Properties of inverses and complements	44
3.4	Equivalence relations and partitions	45
3.5	Orderings	47
	Exercises	51
4	Infinities	55
4.1	Equivalent sets and cardinality	55
4.2	Denumerability of sets	58
4.3	Nondenumerable sets	62
4.4	Infinite vs. unbounded	70
	Exercises	71
	Appendix A: Set-theoretic Reconstruction of Number Systems	75
A.1	The natural numbers	75
A.2	Extension to the set of all integers	78
A.3	Extension to the set of all rational numbers	80
A.4	Extension to the set of all real numbers	81
	Review Exercises	83
B	LOGIC AND FORMAL SYSTEMS	85
5	Basic Concepts of Logic and Formal Systems	87
5.1	Formal systems and models	87
5.2	Natural languages and formal languages	91
5.3	Syntax and semantics	92
5.4	About statement logic and predicate logic	93
6	Statement Logic	97
6.1	Syntax	97
6.2	Semantics: Truth values and truth tables	99
6.2.1	Negation	99
6.2.2	Conjunction	100

6.2.3	Disjunction	101
6.2.4	The Conditional	102
6.2.5	The Biconditional	103
6.3	Tautologies, contradictions and contingencies	104
6.4	Logical equivalence, logical consequence and laws	108
6.5	Natural deduction	112
6.5.1	Conditional Proof	118
6.5.2	Indirect Proof	120
6.6	Beth Tableaux	121
	Exercises	128
7	Predicate Logic	135
7.1	Syntax	135
7.2	Semantics	140
7.3	Quantifier laws and prenex normal form	146
7.4	Natural deduction	152
7.5	Beth Tableaux	163
7.6	Formal and informal proofs	168
7.7	Informal style in mathematical proofs	170
	Exercises	173
8	Formal Systems, Axiomatization, and Model Theory	179
8.1	The syntactic side of formal systems	179
8.1.1	Recursive definitions	179
8.2	Axiomatic systems and derivations	183
8.2.1	Extended axiomatic systems	186
8.3	Semi-Thue systems	190
8.4	Peano's axioms and proof by induction	192
8.5	The semantic side of formal systems: model theory	198
8.5.1	Theories and models	198
8.5.2	Consistency, completeness, and independence	200
8.5.3	Isomorphism	202
8.5.4	An elementary formal system	204

8.5.5	Axioms for ordering relations	206
8.5.6	Axioms for string concatenation	211
8.5.7	Models for Peano's axioms	214
8.5.8	Axiomatization of set theory	215
8.6	Axiomatizing logic	217
8.6.1	An axiomatization of statement logic	217
8.6.2	Consistency and independence proofs	220
8.6.3	An axiomatization of predicate logic	223
8.6.4	About completeness proofs	225
8.6.5	Decidability	227
8.6.6	Gödel's incompleteness theorems	228
8.6.7	Higher-order logic	229
	Exercises	232
Appendix B-I: Alternative Notations and Connectives		237
Appendix B-II: Kleene's Three-Valued Logic		239
Review Exercises		243
C ALGEBRA		245
9	Basic Concepts of Algebra	247
9.1	Definition of algebra	247
9.2	Properties of operations	248
9.3	Special elements	249
9.4	Maps and morphisms	251
	Exercises	253
10	Operational Structures	255
10.1	Groups	255
10.2	Subgroups, semigroups and monoids	261
10.3	Integral domains	264
10.4	Morphisms	269

Exercises	271
11 Lattices	275
11.1 Posets, duality and diagrams	275
11.2 Lattices, semilattices and sublattices	278
11.3 Morphisms in lattices	283
11.4 Filters and ideals	285
11.5 Complemented, distributive and modular lattices	288
Exercises	293
12 Boolean and Heyting Algebras	295
12.1 Boolean algebras	295
12.2 Models of BA	298
12.3 Representation by sets	299
12.4 Heyting algebra	301
12.5 Kripke semantics	304
Exercises	307
Review Exercises	309
 D ENGLISH AS A FORMAL LANGUAGE	 313
13 Basic Concepts	315
13.1 Compositionality	315
13.1.1 A compositional account of statement logic	317
13.1.2 A compositional account of predicate logic	321
13.1.3 Natural language and compositionality	331
13.2 Lambda abstraction	336
13.2.1 Type theory	336
13.2.2 The syntax and semantics of λ -abstraction	339
13.2.3 A sample fragment	341
13.2.4 The lambda calculus	346
13.2.5 Linguistic applications	349

Exercises	365
14 Generalized Quantifiers	371
14.1 Determiners and quantifiers	371
14.2 Conditions on quantifiers	373
14.3 Properties of determiners and quantifiers	378
14.4 Determiners as relations	388
14.5 Context and quantification	392
Exercises	397
15 Intensionality	401
15.1 Frege's two problems	401
15.2 Forms of opacity	407
15.3 Indices and accessibility relations	412
15.4 Tense and time	421
15.5 Indexicality	425
Exercises	427
E LANGUAGES, GRAMMARS, AND AUTOMATA	429
16 Basic Concepts	431
16.1 Languages, grammars and automata	431
16.2 Grammars	435
16.3 Trees	437
16.3.1 Dominance	438
16.3.2 Precedence	439
16.3.3 Labeling	441
16.4 Grammars and trees	444
16.5 The Chomsky Hierarchy	448
16.6 Languages and automata	451
17 Finite Automata, Regular Languages and Type 3 Grammars	453
17.1 Finite automata	453

17.1.1	State diagrams of finite automata	455
17.1.2	Formal definition of deterministic finite automata . . .	455
17.1.3	Non-deterministic finite automata	458
17.1.4	Formal definition of non-deterministic finite automata	460
17.1.5	Equivalence of deterministic and non-deterministic fi- nite automata	460
17.2	Regular languages	462
17.2.1	Pumping Theorem for fal's	468
17.3	Type 3 grammars and finite automaton languages	471
17.3.1	Properties of regular languages	475
17.3.2	Inadequacy of right-linear grammars for natural lan- guages	477
	Exercises	480

18 Pushdown Automata, Context Free Grammars and Lan- guages 485

18.1	Pushdown automata	485
18.2	Context free grammars and languages	490
18.3	Pumping Theorem for cfl's	492
18.4	Closure properties of context free languages	495
18.5	Decidability questions for context free languages	498
18.6	Are natural languages context free?	501
	Exercises	503

19 Turing Machines, Recursively Enumerable Languages and Type 0 Grammars 505

19.1	Turing machines	505
19.1.1	Formal definitions	508
19.2	Equivalent formulations of Turing machines	512
19.3	Unrestricted grammars and Turing machines	513
19.4	Church's Hypothesis	515
19.5	Recursive versus recursively enumerable sets	517
19.6	The universal Turing machine	518
19.7	The Halting Problem for Turing machines	520

Exercises	523
20 Linear Bounded Automata, Context Sensitive Languages and Type 1 Grammars	527
20.1 Linear bounded automata	527
20.1.1 Lba's and context sensitive grammars	528
20.2 Context sensitive languages and recursive sets	529
20.3 Closure and decision properties	531
Exercises	532
21 Languages Between Context Free and Context Sensitive	533
21.1 Indexed grammars	534
21.2 Tree adjoining grammars	540
21.3 Head grammars	546
21.4 Categorical grammars	547
22 Transformational Grammars	553
Appendix E-I: The Chomsky Hierarchy	559
Appendix E-II: Semantic Automata	563
Exercises	570
Review Exercises	571
Solutions to Selected Exercises	573
Chapter 1	573
Chapter 2	575
Chapter 3	576
Chapter 4	577
Review problems, Part A	579
Chapter 6	582
Chapter 7	587
Chapter 8	594
Review problems, Part B	597

Chapter 9	601
Chapter 10	602
Chapter 11	606
Chapter 12	608
Review problems, Part C	610
Chapter 13	614
Chapter 14	616
Chapter 15	619
Chapter 17	620
Chapter 18	626
Chapter 19	629
Chapter 20	630
Appendix E-II	631
Review problems, Part E	632
Bibliography	635
Index	647
