|          | <i>List of Figures and Tables</i>   | page vii |
|          | <i>Acknowledgments</i>  | viii     |
| <b>1</b> | <b>Integrative Multi-Method Research</b>  | 1        |
|          | 1.1 The Multi-Method Boom   | 2        |
|          | 1.2 Integration, not Triangulation  | 4        |
|          | 1.3 The Origins of Proportional Representation:<br>An Integrative Example         | 10       |
|          | 1.4 Overview of the Book  | 13       |
| <b>2</b> | <b>Causation as a Shared Standard</b>   | 19       |
|          | 2.1 The Potential-Outcomes Framework  | 20       |
|          | 2.2 Regression and Causal Inference   | 31       |
|          | 2.3 Regression and the Potential-Outcomes Framework                               | 34       |
|          | 2.4 Conclusions   | 39       |
| <b>3</b> | <b>Using Case Studies to Test and Refine Regressions</b>                          | 45       |
|          | 3.1 Identifying a Case's Causal Counterfactuals                                   | 46       |
|          | 3.2 Validating Measurement  | 48       |
|          | 3.3 Testing or Discovering Hypotheses about Causal Pathways                       | 55       |
|          | 3.4 Searching for Confounders   | 67       |
|          | 3.5 Refining Regressions to Incorporate Qualitative Insights                      | 70       |
| <b>4</b> | <b>Case Selection after Regression</b>  | 75       |
|          | 4.1 Case Selection Techniques: A Brief Overview                                   | 76       |
|          | 4.2 Why Deviant and Extreme-on-the-Independent-Variable<br>Cases Are Usually Best | 85       |

|          |   |            |
|----------|---|------------|
|          | 4.3 The Fit Between Techniques and Goals: Simulations                               | 98         |
|          | 4.4 Conclusions   | 104        |
| <b>5</b> | <b>Combining Case Studies and Matching</b>  | <b>107</b> |
|          | 5.1 Finding Omitted Variables   | 114        |
|          | 5.2 Checking for Measurement Problems   | 118        |
|          | 5.3 Causal Pathways   | 121        |
|          | 5.4 Conclusions   | 122        |
| <b>6</b> | <b>Combining Case Studies and Natural Experiments</b>                               | <b>124</b> |
|          | 6.1 True Natural Experiments  | 127        |
|          | 6.2 Regression-Discontinuity Designs  | 138        |
|          | 6.3 Instrumental Variables Natural Experiments                                      | 142        |
|          | 6.4 Conclusions   | 148        |
| <b>7</b> | <b>Embedding Case Studies within Experiments</b>                                    | <b>150</b> |
|          | 7.1 Experiments and the Potential-Outcomes Framework                                | 151        |
|          | 7.2 Case Studies and Experiments: Basic Considerations                              | 152        |
|          | 7.3 Old Issues: Measurement and Causal Pathways                                     | 155        |
|          | 7.4 Testing SUTVA   | 163        |
|          | 7.5 Experimental Realism and External Validity                                      | 166        |
|          | 7.6 Conclusions   | 169        |
| <b>8</b> | <b>Multi-Method Case Studies</b>  | <b>171</b> |
|          | 8.1 Testing Generalizability  | 172        |
|          | 8.2 Quantifying Effect Sizes  | 175        |
|          | 8.3 Quantitative Analysis as a Step in Process Tracing                              | 177        |
|          | 8.4 Quantitative Causal Effect Estimates as the Outcomes<br>to be Explained         | 181        |
|          | 8.5 Multi-Method Research with Other Modes of<br>Qualitative Research               | 185        |
|          | 8.6 Conclusions   | 186        |
