

The Land Cover Classification System (LCCS) is a comprehensive, standardized *a priori* classification system designed to meet specific user requirements, and created for mapping exercises, independent of the scale or means used to map. It enables a comparison of land cover classes regardless of data source, thematic discipline or country. The LCCS method enhances the standardization process and minimizes the problem of dealing with a very large number of pre-defined classes.

The manual accompanies version 2 of the LCCS software, which has been developed based on the experience gained from numerous United Nations, international and country mapping activities, including the Africover East Africa Project and the Global Land Cover 2000 initiative. The new version of the LCCS software is fully compatible with the previous version, thus ensuring continuity of past and future LCCS mapping activities.

x	Executive Summary

PART ONE

CLASSIFICATION CONCEPTS

1. INTRODUCTION

2. DEFINITIONS

3	2.1 Land Cover
3	2.2 Land use
3	2.3 Classification and Legend
4	2.4 Hierarchical versus Non-Hierarchical Systems
5	2.5 <i>A priori</i> and <i>A posteriori</i> Systems

3. THE CONCEPTUAL BASIS

7	3.1 Problems with current classification systems
7	3.1.1 Purpose
8	3.1.2 Consistency
8	3.1.3 Underlying common principle
10	3.1.4 <i>A priori</i> classification systems
11	3.2 The basis for a new approach
11	3.2.1 Definition adopted for land cover
12	3.2.2 New approach to classification
13	3.2.3 Land Cover Classification System design criteria
14	3.2.4 Dichotomous Phase
14	3.2.5 Modular-Hierarchical Phase
20	3.3 Working with the LCCS Mode Function
25	3.4 Concepts for <i>Primarily Vegetated Areas</i>
26	3.4.1 Natural and Semi-Natural Vegetation (A12 and A24)
34	3.4.2 Cultivated and Managed Terrestrial Areas (A11 and A23)
38	3.5 Classification Concepts for <i>Primarily Non-Vegetated Areas</i>
38	3.5.1 Artificial Surfaces and Associated Areas (B15)
39	3.5.2 Bare Areas (B16)
40	3.5.3 Artificial and Natural Waterbodies, Snow and Ice (B27 and B28)
41	3.6 Environmental and Specific Technical Attributes
41	3.6.1 Environmental Attributes
43	3.6.2 Specific Technical Attributes
43	3.7 The Advantages of the Method Adopted
43	3.7.1 Advantages from the conceptual point of view
44	3.7.2 Advantages from the practical point of view
46	3.8 From Classification To Legend
46	3.8.1 The Minimum Mappable Area concept
47	3.8.2 The Occurrence of Mixed Mapping Units

4. INSTALLATION

51 4.1 Minimum system requirements

52 4.2 Installation procedure

52 4.3 Directory structure

5. OPERATION

53 5.1 Selection techniques

53 5.2 Screen objects

6. THE PROGRAM MODULES

57 6.1 Classification Module

57 6.1.1 Purpose

57 6.1.2 Dichotomous Phase

59 6.1.3 Modular-Hierarchical Phase

65 6.2 Legend Module

65 6.2.1 Purpose

65 6.2.2 How to create a legend

67 6.2.3 Using the Legend Management Menu

76 6.3 Translator Module

76 6.3.1 Purpose

76 6.3.2 How to translate a classification or legend

80 6.3.3 Comparison of External Classes

83 6.3.4 Comparison of Two LCCS Classes

83 6.3.5 Export table/Import table

85 6.4 Links Function

85 6.4.1 Purpose

85 6.4.2 Links Management Menu

87 6.4.3 How to create a link

90 6.5 Close
