Preface by Eugenio Oñate	xi
Preface by Larisa Beilina	xiii
Acknowledgements	xv
About the Companion Website	xvii
Introduction	xix
Key Reminders on Linear Algebra	xxvii
1 Getting Started in One Space Variable	1
1.1 A Model Two-point Boundary Value Problem	2
1.2 The Basic FDM	7
1.3 The Piecewise Linear FEM ($\mathcal{P}_1$ FEM)	12
1.4 The Basic FVM	17
1.4.1 The Vertex-centred FVM	17
1.4.2 The Cell-centred FVM	20
1.4.3 Connections to the Other Methods	22
1.5 Handling Nonzero Boundary Conditions	24
1.6 Effective Resolution	25
1.6.1 Solving SLAEs for one-dimensional problems	26
1.6.2 Example 1.1: Numerical Experiments with the Cell-centred FVM	27
1.7 Exercises	28
2 Qualitative Reliability Analysis	30
2.1 Norms and Inner Products	31
2.1.1 Normed Vector Spaces	32
2.1.2 Inner Product Spaces	33
2.2 Stability of a Numerical Method	35
2.2.1 Stability in the Maximum Norm	35
2.2.2 Stability in the Mean-square Sense	39

2.3	Scheme Consistency	42
2.3.1	Consistency of the Three-point FD Scheme	42
2.3.2	Consistency of the $\mathcal{P}_1$ FE Scheme	44
2.4	Convergence of the Discretisation Methods	48
2.4.1	Convergence of the Three-point FDM	49
2.4.2	Convergence of the $\mathcal{P}_1$ FEM	50
2.4.3	Remarks on the Convergence of the FVM	52
2.4.4	Example 2.1: Sensitivity Study of Three Equivalent Methods	54
2.5	Exercises	59
3	Time-dependent Boundary Value Problems	61
3.1	Numerical Solution of the Heat Equation	64
3.1.1	Implicit Time Discretisation	65
3.1.2	Explicit Time Discretisation	66
3.1.3	Example 3.1: Numerical Behaviour of the Forward Euler Scheme	68
3.2	Numerical Solution of the Transport Equation	70
3.2.1	Natural Schemes	70
3.2.2	The Lax Scheme	72
3.2.3	Upwind Schemes	72
3.2.4	Extensions to the FVM and the FEM	73
3.3	Stability of the Numerical Models	76
3.3.1	Schemes for the Heat Equation	77
3.3.2	The Lax Scheme for the Transport Equation	79
3.4	Consistency and Convergence Results	81
3.4.1	Euler Schemes for the Heat Equation	81
3.4.2	Schemes for the Transport Equation	84
3.5	Complements on the Equation of the Vibrating String (VSE)	85
3.5.1	The Lax Scheme to Solve the VS First-order System	85
3.5.2	Example 3.2: Numerical Study of Schemes for the VS First-order System	86
3.5.3	A Natural Explicit Scheme for the VSE	87
3.6	Exercises	90
4	Methods for Two-dimensional Problems	92
4.1	The Poisson Equation	93
4.2	The Five-point FDM	95
4.2.1	Framework and Method Description	95
4.2.2	A Few Words on Possible Extensions	98
4.3	The $\mathcal{P}_1$ FEM	100
4.3.1	Green's Identities	100
4.3.2	The Standard Galerkin Variational Formulation	103
4.3.3	Method Description	104
4.3.4	Implementation Aspects	110
4.3.5	The Master Element Technique	115
4.3.6	Application to Linear Elasticity	117
4.4	Basic FVM	121
4.4.1	The Vertex-centred FVM: Equivalence with the $\mathcal{P}_1$ FEM	122
4.4.2	The Cell-centred FVM: Focus on Flux Computations	126

4.5	SLAE Resolution	138
4.5.1	<i>Example 4.1: A Crout Solver for Banded Matrices</i>	140
4.5.2	<i>Example 4.2: Iterative Solution of Equivalent FD–FE–FV SLAEs</i>	143
4.6	Exercises	147
5	Analyses in Two Space Variables	149
5.1	Methods for the Poisson Equation	150
5.1.1	<i>Convergence of the Five-point FDM</i>	150
5.1.2	<i>Convergence of the $\mathcal{P}_1$ FEM</i>	153
5.1.3	<i>Example 5.1: Solving the Poisson Equation with Neumann Boundary Conditions</i>	164
5.1.4	<i>Example 5.2: Convergence of the $\mathcal{P}_1$ FEM to Non-smooth Solutions</i>	165
5.1.5	<i>Convergence of the FVM</i>	168
5.1.6	<i>Example 5.3: Triangle-centred FVM versus RT_0 Mixed FEM</i>	187
5.2	Time Integration Schemes for the Heat Equation	192
5.2.1	<i>Pointwise Convergence of Five-point FD Schemes</i>	193
5.2.2	<i>Convergence of $\mathcal{P}_1$ FE Schemes in the Mean-square Sense</i>	196
5.2.3	<i>Pointwise Behaviour of FE and FV Schemes: An Overview</i>	204
5.3	Exercises	205
6	Extensions	210
6.1	Lagrange FEM of Degree Greater than One	211
6.1.1	<i>The $\mathcal{P}_k$ FEM in One-dimension Space for $k > 1$</i>	211
6.1.2	<i>A FEM for Quadrilateral Meshes</i>	217
6.1.3	<i>Piecewise Quadratic FEs in Two Space Variables</i>	223
6.1.4	<i>The Case of Curved Domains</i>	225
6.1.5	<i>Example 6.1: $\mathcal{P}_2$-FE Solution of the Equation $u - \Delta u = f$</i>	231
6.1.6	<i>More about Implementation in Two-dimensional Space</i>	234
6.2	Extensions to the Three-dimensional Case	240
6.2.1	<i>Methods for Rectangular Domains</i>	241
6.2.2	<i>Tetrahedron-based Methods</i>	245
6.2.3	<i>Implementation Aspects</i>	249
6.2.4	<i>Example 6.2: A MATLAB Code for Three-dimensional FE Computations</i>	252
6.3	Exercises	258
7	Miscellaneous Complements	261
7.1	Numerical Solution of Biharmonic Equations in Rectangles	261
7.1.1	<i>Model Fourth-order Elliptic PDEs</i>	262
7.1.2	<i>The 13-point FD Scheme</i>	263
7.1.3	<i>Hermite FEM in Intervals and Rectangles</i>	265
7.2	The Advection–Diffusion Equation	272
7.2.1	<i>A Model One-Dimensional Equation</i>	272
7.2.2	<i>Overcoming the Main Difficulties with the FDM</i>	274
7.2.3	<i>Example 7.1: Numerical Study of the Upwind FD Scheme</i>	277
7.2.4	<i>The SUPG Formulation</i>	278
7.2.5	<i>Example 7.2: Numerics of the SUPG Formulation for the $\mathcal{P}_1$ FEM</i>	281
7.2.6	<i>An Upwind FV Scheme</i>	282

7.2.7	<i>A FE Scheme for the Time-Dependent Problem</i>	286
7.2.8	<i>Example 7.3: Numerical Study of the Weighted Mass FE Scheme</i>	292
7.3	Basics of a Posteriori Error Estimates and Adaptivity	294
7.3.1	<i>A Posteriori Error Estimates</i>	295
7.3.2	<i>Mesh Adaptivity: h, p and h-p Methods</i>	298
7.4	A Word about Non-linear PDEs	300
7.4.1	<i>Example 7.4: Solving Non-linear Two-point Boundary Value Problems</i>	301
7.4.2	<i>Example 7.5: A Quasi-explicit Method for the Navier–Stokes Equations</i>	305
7.5	Exercises	309
