

A total eclipse of the Sun is the most awesome sight in the heavens. *Totality: Eclipses of the Sun* takes you to eclipses of the past, present, and future, and lets you see—and feel—why people travel to the ends of the Earth to observe them.

Totality: Eclipses of the Sun is a well-established guide and reference book on solar eclipses. It explains: how to observe them; how to photograph and videotape them; why they occur; their history and mythology; and future eclipses—when and where to see them.

Totality also tells the remarkable story of how eclipses shocked scientists, revealed the workings of the Sun, and made Einstein famous. And the book shares the experiences and advice of many veteran eclipse observers.

Totality: Eclipses of the Sun is profusely illustrated with stunning photographs (many in color) and more than a hundred maps and diagrams. It can be read by lay people and astronomers with ease and enjoyment.

Mark Littmann holds an endowed professorship in science writing at the University of Tennessee.

Fred Espenak is an astrophysicist at NASA's Goddard Space Flight Center.

Ken Willcox was a research chemist at Phillips Petroleum Company and adjunct professor of physics and astronomy at Bartlesville Wesleyan College.

'The best book on solar eclipses ever written.'

Leif Robinson, Editor in Chief (Emeritus) of *Sky & Telescope*

'This is the book! Everything you ever wanted to know about eclipses. You can always count on these writers to give you the best.'

Jack Horkheimer, writer and host of "StarGazer" on PBS

'This is a bulging all-you-ever-wanted-to-know American Guide to eclipses in general... A book to dip into at need, it offers lavish information in accessible style.'

Yorkshire Post

'If you have even the slightest interest in our closest star, then this book really should be in your collection!'
