Preface

xi

List of examples

xvii

1 Introduction

1

1.1 Point process statistics

2

1.2 Examples of point process data

5

1.2.1 A pattern of amacrine cells

5

1.2.2 Gold particles

6

1.2.3 A pattern of Western Australian plants

7

1.2.4 Waterstriders

8

1.2.5 A sample of concrete

10

1.3 Historical notes

10

1.3.1 Determination of number of trees in a forest

10

1.3.2 Number of blood particles in a sample

12

1.3.3 Patterns of points in plant communities

13

1.3.4 Formulating the power law for the pair correlation function for galaxies

15

1.4 Sampling and data collection

17

1.4.1 General remarks

17

1.4.2 Choosing an appropriate study area

19

1.4.3 Data collection

20

1.5 Fundamentals of the theory of point processes

23

1.6 Stationarity and isotropy

35

1.6.1 Model approach and design approach

35

1.6.2 Finite and infinite point processes

36

1.6.3 Stationarity and isotropy

37

1.6.4 Ergodicity

39

1.7 Summary characteristics for point processes

40

1.7.1 Numerical summary characteristics

41

1.7.2 Functional summary characteristics

42

1.8	Secondary structures of point processes	42
1.8.1	Introduction	42
1.8.2	Random sets	43
1.8.3	Random fields	44
1.8.4	Tessellations	46
1.8.5	Neighbour networks or graphs	49
1.9	Simulation of point processes	52
2	The homogeneous Poisson point process	57
2.1	Introduction	58
2.2	The binomial point process	59
2.2.1	Introduction	59
2.2.2	Basic properties	60
2.2.3	The periodic binomial process	62
2.2.4	Simulation of the binomial process	63
2.3	The homogeneous Poisson point process	66
2.3.1	Introduction	66
2.3.2	Basic properties	67
2.3.3	Characterisations of the homogeneous Poisson process	69
2.4	Simulation of a homogeneous Poisson process	70
2.5	Model characteristics	71
2.5.1	Moments and moment measures	71
2.5.2	The Palm distribution of a homogeneous Poisson process	74
2.5.3	Summary characteristics of the homogeneous Poisson process	78
2.6	Estimating the intensity	79
2.7	Testing complete spatial randomness	83
2.7.1	Introduction	83
2.7.2	Quadrat counts	86
2.7.3	Distance methods	89
2.7.4	The J -test	91
2.7.5	Two index-based tests	92
2.7.6	Discrepancy tests	93
2.7.7	The L -test	95
2.7.8	Other tests and recommendations	97
3	Finite point processes	99
3.1	Introduction	100
3.2	Distributions of numbers of points	104
3.2.1	The binomial distribution	104
3.2.2	The Poisson distribution	106
3.2.3	Compound distributions	107
3.2.4	Generalised distributions	109

3.3	Intensity functions and their estimation	110
3.3.1	Parametric statistics for the intensity function	111
3.3.2	Non-parametric estimation of the intensity function	114
3.3.3	Estimating the point density distribution function	117
3.4	Inhomogeneous Poisson process and finite Cox process	118
3.4.1	The inhomogeneous Poisson process	118
3.4.2	The finite Cox process	123
3.5	Summary characteristics for finite point processes	125
3.5.1	Nearest-neighbour distances	126
3.5.2	Dilation function	127
3.5.3	Graph-theoretic statistics	129
3.5.4	Second-order characteristics	129
3.6	Finite Gibbs processes	137
3.6.1	Introduction	137
3.6.2	Gibbs processes with fixed number of points	139
3.6.3	Gibbs processes with a random number of points	147
3.6.4	Second-order summary characteristics of finite Gibbs processes	154
3.6.5	Further discussion	156
3.6.6	Statistical inference for finite Gibbs processes	160
4	Stationary point processes	173
4.1	Basic definitions and notation	174
4.2	Summary characteristics for stationary point processes	179
4.2.1	Introduction	179
4.2.2	Edge-correction methods	180
4.2.3	The intensity λ	189
4.2.4	Indices as summary characteristics	195
4.2.5	Empty-space statistics and other morphological summaries	199
4.2.6	The nearest-neighbour distance distribution function	206
4.2.7	The J -function	213
4.3	Second-order characteristics	214
4.3.1	The three functions: K , L and g	214
4.3.2	Theoretical foundations of second-order characteristics	223
4.3.3	Estimators of the second-order characteristics	228
4.3.4	Interpretation of pair correlation functions	239
4.4	Higher-order and topological characteristics	244
4.4.1	Introduction	244
4.4.2	Third-order characteristics	244
4.4.3	Delaunay tessellation characteristics	247
4.4.4	The connectivity function	248

4.5	Orientation analysis for stationary point processes	250
4.5.1	Introduction	250
4.5.2	Nearest-neighbour orientation distribution	252
4.5.3	Second-order orientation analysis	254
4.6	Outliers, gaps and residuals	256
4.6.1	Introduction	256
4.6.2	Simple outlier detection	256
4.6.3	Simple gap detection	257
4.6.4	Model-based outliers	257
4.6.5	Residuals	259
4.7	Replicated patterns	260
4.7.1	Introduction	260
4.7.2	Aggregation recipes	261
4.8	Choosing appropriate observation windows	264
4.8.1	General ideas	264
4.8.2	Representative windows	265
4.9	Multivariate analysis of series of point patterns	270
4.10	Summary characteristics for the non-stationary case	279
4.10.1	Formal application of stationary characteristics and estimators	280
4.10.2	Intensity reweighting	281
4.10.3	Local rescaling	282
5	Stationary marked point processes	293
5.1	Basic definitions and notation	294
5.1.1	Introduction	294
5.1.2	Marks and their properties	295
5.1.3	Marking models	296
5.1.4	Stationarity	299
5.1.5	First-order characteristics	300
5.1.6	Mark-sum measure	304
5.1.7	Palm distribution	304
5.2	Summary characteristics	306
5.2.1	Introduction	306
5.2.2	Intensity and mark-sum intensity	306
5.2.3	Mean mark, mark d.f. and mark probabilities	309
5.2.4	Indices for stationary marked point processes	311
5.2.5	Nearest-neighbour distributions	320
5.3	Second-order characteristics for marked point processes	323
5.3.1	Introduction	323
5.3.2	Definitions for qualitative marks	323
5.3.3	Definitions for quantitative marks	341
5.3.4	Estimation of second-order characteristics	352

5.4	Orientation analysis for marked point processes	355
5.4.1	Introduction	355
5.4.2	Orientation analysis for anisotropic processes with angular marks	357
5.4.3	Orientation analysis for isotropic processes with angular marks	357
5.4.4	Orientation analysis with constructed marks	359
6	Modelling and simulation of stationary point processes	363
6.1	Introduction	364
6.2	Operations with point processes	364
6.2.1	Thinning	365
6.2.2	Clustering	368
6.2.3	Superposition	370
6.3	Cluster processes	371
6.3.1	General cluster processes	371
6.3.2	Neyman–Scott processes	374
6.4	Stationary Cox processes	379
6.4.1	Introduction	379
6.4.2	Properties of stationary Cox processes	383
6.4.3	Statistics for Cox processes	386
6.5	Hard-core point processes	387
6.5.1	Introduction	387
6.5.2	Matérn hard-core processes	388
6.5.3	The dead leaves model	391
6.5.4	The RSA process	393
6.5.5	Random dense packings of hard spheres	394
6.6	Stationary Gibbs processes	398
6.6.1	Basic ideas and equations	398
6.6.2	Simulation of stationary Gibbs processes	402
6.6.3	Statistics for stationary Gibbs processes	402
6.7	Reconstruction of point patterns	407
6.7.1	Reconstructing point patterns without a specified model	407
6.7.2	An example: reconstruction of Neyman–Scott processes	410
6.7.3	Practical application of the reconstruction algorithm	415
6.8	Formulas for marked point process models	417
6.8.1	Introduction	417
6.8.2	Independent marks	418
6.8.3	Random field model	420
6.8.4	Intensity-weighted marks	421
6.9	Moment formulas for stationary shot-noise fields	423

6.10	Space-time point processes	425
6.10.1	Introduction	425
6.10.2	Space-time Poisson processes	428
6.10.3	Second-order statistics for completely stationary event processes	430
6.10.4	Two examples of space-time processes	434
6.11	Correlations between point processes and other random structures	437
6.11.1	Introduction	437
6.11.2	Correlations between point processes and random fields	438
6.11.3	Correlations between point processes and fibre processes	442
7	Fitting and testing point process models	445
7.1	Choice of model	445
7.2	Parameter estimation	448
7.2.1	Maximum likelihood method	448
7.2.2	Method of moments	450
7.2.3	Trial-and-error estimation	452
7.3	Variance estimation by bootstrap	453
7.4	Goodness-of-fit tests	455
7.4.1	Envelope test	455
7.4.2	Deviation test	457
7.5	Testing mark hypotheses	460
7.5.1	Introduction	460
7.5.2	Testing independent marking, test of association	460
7.5.3	Testing geostatistical marking	468
7.6	Bayesian methods for point pattern analysis	471
Appendix A	Fundamentals of statistics	479
Appendix B	Geometrical characteristics of sets	483
Appendix C	Fundamentals of geostatistics	489
