

THE DICTIONARY OF HUMAN GEOGRAPHY: Third Edition

Established as the definitive encyclopedic guide to the concepts, terms and theories of human geography, the Dictionary has been completely updated and revised. All bibliographies have been brought up to date, recent research has been included, and the article structure itself has been overhauled following extensive research among existing users of the book. Many new entries are included, while others have been recast to reflect current thinking in the discipline.

'As a whole the book is even better than the previous volume . . . its erudition, comprehensiveness, and generally high quality of contribution make it remarkable value for money.' *Ecumene*

'Human geography is in very good health judging by the third edition of this dictionary, which has matured from 576 to 724 pages. Instead of simply adding bulk, however, the three unchanged editors have carefully discarded about a hundred entries, added 120 new ones and extended many others . . . The result is a judicious and welcome consolidation and updating of a familiar guide . . . This is easily the best dictionary of human geography in print, on every count.' *Progress in Human Geography*

R. J. Johnston is Professor of Geography at the University of Bristol.

Derek Gregory is Professor of Geography at the University of British Columbia.

David M. Smith is Professor of Geography at Queen Mary and Westfield College, University of London.
