#### and Extensive Form

# Bernhard von Stengel

- 3.1 Introduction
- Bimatrix Games and the Best Response Condi 3.2

- 3.3 Equilibria via Labeled Polytopes
- The Lemke–Howson Algorithm 3.4
- 3.5 Integer Pivoting
- 3.6 Degenerate Games
- Extensive Games and Their Strategic Form 3.7
- 3.8 Subgame Perfect Equilibria
- **Reduced Strategic Form** 3.9
- 3.10 The Sequence Form
- 3.11 Computing Equilibria with the Sequence Form
- 3.12 Further Reading
- 3.13 Discussion and Open Problems

Bibliography

Exercises

### Learning, Regret Minimization, and Equilibria

Avrim Blum and Yishay Mansour

- 4.1 Introduction
- Model and Preliminaries
- **External Regret Minimization** 4.3
- 4.4 Regret Minimization and Game Theory
- Generic Reduction from External to Swap Reg 4.5
- The Partial Information Model 4.6
- 4.7 On Convergence of Regret-Minimizing Strateg Equilibrium in Routing Games
- 4.8 Notes
