234		General formulation noirouborthi	1.885	
1	Intr	oduction	1 08 6.2	
	1.1	Main motivations and scope	1	
	1.2	Basic definitions and examples	2	
	1.3	Conventional notation	9	
1		Aggregation functions based on minimal dissimilarity	0.0 11	
2	Proj	perties for aggregation	11	
	2.1	Introduction	11	
	2.2	Elementary mathematical properties	12	
	2.3	Grouping-based properties	31	
	2.4	Invariance properties	41	
	2.5	Further properties	49	
3	Conjunctive and disjunctive aggregation functions			
	3.1	Preliminaries and general notes	56	
	3.2	Generated conjunctive aggregation functions	59	
	3.3	Triangular norms and related conjunctive aggregation functions	64	
	3.4	Copulas and quasi-copulas	88	
	3.5	Disjunctive aggregation functions	100	
	3.6	Uninorms	106	
	3.7	Nullnorms	115	
	3.8	More aggregation functions related to t-norms	119	
	3.9	Restricted distributivity	123	
4	Mea	ans and averages	130	
	4.1	Introduction and definitions	130	
	4.2	Quasi-arithmetic means	132	

vi	iii	Contents	
	4.3	Generalizations of quasi-arithmetic means	139
	4.4	Associative means	161
	4.5	Means constructed from a mean value property	163
	4.6	Constructing means	166
	4.7	Further extended means	168
5	Agg	Aggregation functions based on nonadditive integrals	
	5.1	Introduction	171
	5.2	Set functions, capacities, and games	172
	5.3	Some linear transformations of set functions	177
	5.4	The Choquet integral	181
	5.5	The Sugeno integral	207
	5.6	Other integrals	227
6	Cons	struction methods	234
	6.1	Introduction	234
	6.2	Transformed aggregation functions	234
	6.3	Composed aggregation	242
	6.4	Weighted aggregation functions	247
	6.5	Some other aggregation-based construction methods	252
	6.6	Aggregation functions based on minimal dissimilarity	257
	6.7	Ordinal sums of aggregation functions	261
	6.8	Extensions to aggregation functions	266
7	Aggr	regation on specific scale types	272
	7.1	Introduction	272
	7.2	Ratio scales	273
	7.3	Difference scales	280
	7.4	Interval scales	284
	7.5	Log-ratio scales	289
8	Aggr	egation on ordinal scales	292
	8.1	Introduction	292
	8.2	Order invariant subsets	293
	8.3	Lattice polynomial functions and some of their properties	296
	8.4	Ordinal scale invariant functions	300
	8.5	Comparison meaningful functions on a single ordinal scale	304
	8.6	Comparison meaningful functions on independent ordinal scales	308
	8.7	Aggregation on finite chains by chain independent functions	310
9	Aggr	egation on bipolar scales	317
	9.1	Introduction	317
	9.2	Associative bipolar operators	319

	Contents			
	9.3	Minimum and maximum on symmetrized linearly ordered sets		325
	9.4	Separable aggregation functions		332
	9.5	Integral-based aggregation functions		334
10	Behavioral analysis of aggregation functions			
	10.1	Introduction		348
	10.2	Expected values and distribution functions		348
	10.3	Importance indices		361
	10.4	Interaction indices		367
	10.5	Maximum improving index		370
	10.6	Tolerance indices		372
	10.7	Measures of arguments contribution and involvement		378
11	Identification of aggregation functions			382
	11.1	Introduction		382
	11.2	General formulation		383
	11.3	The case of parametrized families of aggregation functions		386
	11.4	The case of generated aggregation functions		388
	11.5	The case of integral-based aggregation functions		391
	11.6	Available software		396
Ap	pendi	xA: Aggregation of infinitely many arguments		397
1	A.1	Introduction		397
	A.2	Infinitary aggregation functions on sequences		397
	A.3	General aggregation of infinite number of inputs		405
Ap	pendi	x B: Examples and applications		410
	B.1	Main domains of applications		410
	B.2	A specific application: mixture of uncertainty measures		414
