

CONTENTS

1	Why quantum gravity?	1
1.1	Quantum theory and the gravitational field	1
1.1.1	Introduction	1
1.1.2	Main motivations for quantizing gravity	3
1.1.3	Relevant scales	4
1.1.4	Quantum mechanics and Newtonian gravity	7
1.1.5	Quantum field theory in curved space-time	14
1.2	Problems of a fundamentally semiclassical theory	15
1.3	Approaches to quantum gravity	22
2	Covariant approaches to quantum gravity	25
2.1	The concept of a graviton	25
2.1.1	Weak gravitational waves	25
2.1.2	Gravitons from representations of the Poincaré group	30
2.1.3	Quantization of the linear field theory	33
2.2	Path-integral quantization	39
2.2.1	General properties of path integrals	39
2.2.2	The perturbative non-renormalizability	42
2.2.3	Effective action and Feynman rules	47
2.2.4	Semiclassical Einstein equations	55
2.2.5	Asymptotic safety	63
2.2.6	Regge calculus and dynamical triangulation	66
2.3	Quantum supergravity	70
3	Parametrized and relational systems	73
3.1	Particle systems	73
3.1.1	Parametrized non-relativistic particle	73
3.1.2	Some remarks on constrained systems	76
3.1.3	The relativistic particle	78
3.2	The free bosonic string	81
3.3	Parametrized field theories	86
3.4	Relational dynamical systems	93
4	Hamiltonian formulation of general relativity	98
4.1	The seventh route to geometrodynamics	98
4.1.1	Principle of path independence	98
4.1.2	Explicit form of generators	100
4.1.3	Geometrodynamics and gauge theories	103
4.2	The 3+1 decomposition of general relativity	105
4.2.1	The canonical variables	106

4.2.2	Hamiltonian form of the Einstein–Hilbert action	109
4.2.3	Discussion of the constraints	114
4.2.4	The case of open spaces	118
4.2.5	Structure of configuration space	120
4.3	Canonical gravity with connections and loops	124
4.3.1	The canonical variables	124
4.3.2	Discussion of the constraints	127
4.3.3	Loop variables	130
5	Quantum geometrodynamics	133
5.1	The programme of canonical quantization	133
5.2	The problem of time	136
5.2.1	Time before quantization	138
5.2.2	Time after quantization	141
5.3	The geometrodynamical wave function	144
5.3.1	The diffeomorphism constraints	144
5.3.2	WKB approximation	147
5.3.3	Remarks on the functional Schrödinger picture	148
5.3.4	Connection with path integrals	151
5.3.5	Anomalies and factor ordering	153
5.3.6	Canonical quantum supergravity	158
5.4	The semiclassical approximation	164
5.4.1	Analogies from quantum mechanics	164
5.4.2	Derivation of the Schrödinger equation	170
5.4.3	Quantum-gravitational correction terms	175
6	Quantum gravity with connections and loops	181
6.1	Connection and loop variables	181
6.1.1	Connection representation	181
6.1.2	Loop representation	184
6.2	Quantization of area	189
6.3	Quantum Hamiltonian constraint	194
7	Quantization of black holes	199
7.1	Black-hole thermodynamics and Hawking radiation	199
7.1.1	The laws of black-hole mechanics	199
7.1.2	Hawking and Unruh radiation	201
7.1.3	Bekenstein–Hawking entropy	208
7.2	Canonical quantization of the Schwarzschild black hole	209
7.2.1	Classical formalism	210
7.2.2	Quantization	213
7.3	Black-hole spectroscopy and entropy	217
7.4	Quantum theory of collapsing dust shells	221
7.4.1	Covariant gauge fixing	222
7.4.2	Embedding variables for the classical theory	223

7.4.3	Quantization	226
7.5	The Lemaître–Tolman–Bondi model	229
7.5.1	The classical LTB model	229
7.5.2	Quantization	232
7.6	The information-loss problem	236
7.7	Primordial black holes	238
8	Quantum cosmology	243
8.1	Minisuperspace models	243
8.1.1	General introduction	243
8.1.2	Quantization of a Friedmann universe	246
8.1.3	(2+1)-dimensional quantum gravity	256
8.2	Introduction of inhomogeneities	258
8.3	Boundary conditions	262
8.3.1	DeWitt's boundary condition	263
8.3.2	No-boundary condition	263
8.3.3	Tunnelling condition	268
8.3.4	Comparison of no-boundary and tunnelling wave function	269
8.3.5	Symmetric initial condition	272
8.4	Loop quantum cosmology	272
8.4.1	Classical variables	272
8.4.2	Quantization	274
9	String theory	279
9.1	General introduction	279
9.2	Quantum-gravitational aspects	284
9.2.1	The Polyakov path integral	284
9.2.2	Effective actions	288
9.2.3	T-duality and branes	291
9.2.4	Superstrings	295
9.2.5	Black-hole entropy	298
9.2.6	Brane worlds	301
10	Quantum gravity and the interpretation of quantum theory	307
10.1	Decoherence and the quantum universe	307
10.1.1	Decoherence in quantum mechanics	308
10.1.2	Decoherence in quantum cosmology	310
10.1.3	Decoherence of primordial fluctuations	318
10.2	Arrow of time	319
10.3	Outlook	324
