Preface	xiii
1 Introduction	1
1.1 Overview	1
1.2 Scales and Dimensions	2
1.3 Night Sky	5
1.4 Constellations	8
1.5 Earth, Sun, and the Solar System	11
1.5.1 Retrograde Motion of Planets	12
1.6 Sidereal Time	13
1.7 Astronomical Catalogs and Software	15
2 Observations	17
2.1 Electromagnetic Waves	18
2.2 Electromagnetic Spectrum	20
2.3 Telescopes	23
2.3.1 Refractor Telescope	24
2.3.2 Reflecting Telescope	27
2.4 Observations at Visible Frequencies	29
2.4.1 Theoretical Limit on Resolution	31
2.4.2 Seeing	32
2.5 Mounting of Telescope	33
2.5.1 Equatorial Mount	33
2.5.2 Azimuthal Mount	33
2.6 Interferometry	33
2.7 Observations at Other Wavelengths	34
3 Astrometry	37
3.1 Coordinate Systems	41
3.1.1 The Horizontal System	42
3.1.2 Equatorial Coordinate System	43
3.1.3 Ecliptic System	44
3.1.4 Galactic Coordinate System	44
3.1.5 Supergalactic Coordinate System	44
3.2 Space Velocity and Proper Motion of Stars	44
3.2.1 Doppler Effect	46

3.3	Parallax	47
3.4	Aberration	50
3.5	Coordinate Transformations	51
3.5.1	Transformation between Equatorial and Ecliptic Coordinate Systems	54
3.5.2	Precession of Equinoxes	55
3.5.3	Equatorial Mounting of a Telescope	56
4	Photometry	59
4.1	Introduction	59
4.2	Flux Density and Intensity	61
4.3	Blackbody Radiation	66
4.4	Energy Density in an Isotropic Radiation Field	70
4.5	Magnitude Scale	71
4.5.1	Apparent Magnitude	72
4.5.2	Absolute Magnitude	73
4.5.3	The Color Index	74
4.5.4	Bolometric Magnitude	74
4.6	Stellar Temperatures	75
4.6.1	Effective Temperature	75
4.6.2	Color Temperature	75
4.7	Appendix: Solid Angle	77
5	Gravitation and Kepler's Laws	81
5.1	Two-Body Problem	82
5.2	Application to Solar System	85
5.3	Virial Theorem	86
5.4	Tidal Forces and Roche Limit	88
6	Stars, Stellar Spectra, and Classification	93
6.1	Introduction	93
6.2	Stellar Spectra	96
6.3	Harvard Classification of Stellar Spectra	99
6.4	Saha Equation	101
6.5	Derivation of the Saha Equation	105
6.5.1	Number of States of a Free Particle in a Box	108
6.6	HR Diagram	109
6.7	Star Clusters and Associations	112
6.8	Distance and Age Determination of Clusters Using Color-Magnitude Diagram	113
7	Radiation from Astronomical Sources	117
7.1	Continuous Spectra	118
7.1.1	Synchrotron Radiation	118
7.1.2	Bremsstrahlung	121
7.1.3	Compton Scattering	122

7.1.4	Bound-Free Transitions	123
7.2	Absorption and Emission Line Spectrum	124
7.2.1	Radial Velocity Due to Doppler Effect	128
7.2.2	Causes of Finite Width of Spectral Lines	129
7.3	Molecular Band Spectra	129
7.4	Extinction	131
7.4.1	Extinction Coefficient	135
7.4.2	Color Excess	136
8	Stellar Structure	139
8.1	Pressure Gradient	140
8.2	Mass Distribution	143
8.3	Energy Production	143
8.4	Temperature Gradient	144
8.4.1	Radiative Transport	144
8.4.2	Convective Transport	146
8.5	Boundary Conditions	148
8.6	Rosseland Mean Opacity	149
8.7	Equation of State	152
8.7.1	Ideal Gas Law	153
8.7.1.1	Derivation of the Ideal Gas Law	154
8.7.1.2	Radiation Pressure	158
8.8	Energy Production in Stars	159
8.9	Appendix: Maxwell-Boltzmann Distribution	161
9	Stellar Nuclear Reactions	165
9.1	Fundamental Interactions	166
9.2	Fundamental Particles	167
9.3	A Brief Introduction to Neutrinos	168
9.4	PP Chain	169
9.5	Nuclear Reaction Rate	170
9.5.1	Nuclear Reaction Rate: Derivation	175
9.5.2	Nuclear Cross Section	177
9.5.3	Estimating the Nuclear Reaction Rate	177
9.6	Energy Released in Nuclear Reactions	181
9.7	Standard Solar Model	186
10	Star Formation and Stellar Evolution	189
10.1	Early Stage of Star Formation	190
10.1.1	Fragmentation	192
10.2	Evolution on the Main Sequence	193
10.3	Degenerate Free Electron Gas	194
10.4	Evolution beyond the Main Sequence	196
10.5	Population I and II Stars	198
10.6	White Dwarfs	199

10.7 Neutron Star	200
10.8 Black Holes	202
10.9 Supernova	204
11 The Sun	207
11.1 Solar Atmosphere	208
11.1.1 Photosphere	208
11.1.2 Chromosphere	210
11.1.3 Corona	211
11.2 Dynamo Mechanism for Magnetic Field Enhancement	214
11.3 Sunspots and the Solar Cycle	216
11.4 Some Transient Phenomena	220
12 The Solar System	223
12.1 Orbital Properties of Planets	224
12.2 Retrograde Motion of Planets	226
12.3 Albedo and Temperature of Planets	230
12.4 Terrestrial Planets: Interior Structure	232
12.5 Jovian Planets	236
12.6 The Moon	238
12.6.1 Eclipses and Occultations	240
12.7 Why Did Pluto Lose Its Planetship?	241
12.8 Formation of the Solar System	242
13 Binary Stars	247
13.1 Kinematics of a Binary Star System	247
13.2 Classification of Binary Stars	250
13.3 Mass Determination	254
13.4 Mass Transfer in Binary Systems	257
14 The Milky Way	265
14.1 The Distance Ladder	266
14.2 Distribution of Matter in the Milky Way	270
14.3 Differential Rotation of the Milky Way	273
14.4 Mapping the Galactic Disk with Radio Waves	276
14.5 Formation of the Spiral Arms	279
15 Galaxies	283
15.1 Elliptical Galaxies	286
15.2 Spiral Galaxies	289
15.3 Evidence for Dark Matter	292
15.4 Galaxy Clusters	293

16 Cosmology	295
16.1 Euclidean Space	296
16.2 Curved Space	296
16.3 Minkowski Space-Time	298
16.4 Big Bang Cosmology	299
16.4.1 Cosmological Redshift and Hubble's Law	299
16.4.2 FRW Line Element	301
16.4.3 Matter and Radiation	303
16.4.4 Cosmological Evolution Equations	305
16.4.5 Accelerating Universe and Dark Energy	306
16.5 The Early Universe	311
16.5.1 Primordial Nucleosynthesis	315
16.5.2 Recombination	320
16.5.3 Structure Formation	321
16.5.4 Cosmic Microwave Background Radiation (CMBR)	322
17 Active Galaxies	325
17.1 Introduction	325
17.2 Active Galactic Nuclei: Some Basic Properties	326
17.2.1 Size of AGNs	328
17.2.2 Luminosity	329
17.2.3 Superluminal Motion	330
17.3 Classification of Active Galaxies	331
17.3.1 Seyfert Galaxies	331
17.3.2 Radio Galaxies	332
17.3.3 Quasars	334
17.3.4 Blazars	336
17.4 Unified Model of AGNs	336
Appendix Fundamental Constants and Conversion of Units	339
References	341
Index	343
