Prefacexi

1 Data librarianship: responding to research innovation.....1

 The rise of data librarians.....1

 Addressing early demand for data services in the social services3

 The growth of data collections.....8

 The origins of data libraries10

 A new map of support for services and researchers15

2 What is different about data?19

 Attitudes and pre-conceptions19

 Is there a difference if data are created or re-used?22

 Data and intellectual property rights23

 The relationship of metadata to data24

 Big data27

 Long tail data28

 The need for data citation29

 Embracing and advocating data curation.....31

3 Supporting data literacy35

 Information literacy with data awareness.....35

 Categories of data41

 Top tips for the reference interview42

 What has statistical literacy got to do with it?44

 Data journalism and data visualization45

 Topics in research data management.....46

 Training in data handling50

4	Building a data collection	53
	Policy and data.....	53
	Promoting and sustaining use of a collection.....	58
	Embedding data within the library.....	64
5	Research data management service and policy: working across your institution.....	67
	Librarians and RDM.....	67
	Why does an institution need an RDM policy?	69
	What comprises a good RDM policy?	73
	Tips for getting an RDM policy passed.....	73
	Toolkits for measuring institutional preparedness for RDM.....	74
	Planning RDM services: what do they look like?	76
	Evaluation and benchmarking.....	81
	What is the library's role?	83
6	Data management plans as a calling card.....	87
	Responding to challenges in data support.....	87
	Leading by example: eight vignettes.....	87
	Social science research at the London School of Economics and Political Science.....	88
	Clinical medical research at the London School of Hygiene and Tropical Medicine.....	89
	Archaeological research at the University of California, Los Angeles	91
	Geological research at the University of Oregon.....	93
	Medical and veterinary research at the University of Glasgow	95
	Astronomical research at Columbia University	96
	Engineering research at the University of Guelph.....	97
	Health-related social science research at the University of Bath	99
	The snowball effect of data management plans	101
7	Essentials of data repositories.....	103
	Repository versus archive?	103
	Put, get, search: what is a repository?	104
	Scoping your data repository.....	106
	Choosing a metadata schema	108
	Managing access	111
	Data quality review (or be kind to your end-users)	112
	Digital preservation planning across space and time.....	114
	Trusted digital repositories	116
	The need for interoperability.....	117
8	Dealing with sensitive data	121
	Challenging assumptions about data	121
	Understanding how researchers view their research	122
	Sensitivity and confidentiality – a general or specific problem?	124
	A role in giving advice on consent agreements	126
	Storing and preserving confidential data effectively	128

9 Data sharing in the disciplines.....	137
Culture change in academia	137
In the social sciences.....	138
In the sciences	139
In the arts and humanities	143
10 Supporting open scholarship and open science	147
Going green: impact of the open access movement	147
Free software, open data and data licences	149
Big data as a new paradigm?	150
Data as first-class research objects.....	152
Reproducibility in science	153
Do libraries need a reboot?	156
References	161
Index.....	169
