

An authoritative introduction for graduate students in the physical sciences, this award-winning textbook explains the wide variety of physical, chemical, and geological processes that govern the motions and properties of planets.

This updated second edition has been revised and improved with data that are current as of mid-2014:

- Many data tables and plots have been updated to account for the latest measurements
- A new appendix focuses on recent discoveries since the second edition was first published (2010), compiled in chapter order
- Includes new results from missions such as Cassini, MESSENGER, MRO, LRO, Dawn at Vesta, Curiosity, and others, as well as many ground-based observatories
- Covers significant updates from the Kepler mission on new exoplanets and planetary systems

With over 300 exercises to help students learn how to apply the concepts covered, this textbook is ideal for graduate courses in astronomy, planetary science, and earth science, and well suited as a reference for researchers.

"The second edition keeps pace with the new discoveries in planetary science. It still has the classic figures and tables, but it also has spectacular new images and new theories. More space is devoted to derivations, so students can learn the material on their own. The book works at many levels, and I will continue to use it in my courses."

Andrew P. Ingersoll, Division of Geological and Planetary Sciences, California Institute of Technology

"... a comprehensive coverage of this fascinating and expanding field ... an excellent textbook for anyone studying astronomy and planetary geology ... Highly recommended."

Richard Taylor, Spaceflight

"... the book is essentially excellent ... a valuable introduction to aspects of planetary science ... the discussions are generally so comprehensive and up-to-date that active scientists will find the individual chapters to be excellent 'primers' on subjects outside their formal training. There really is no other book at this level like Planetary Sciences."

William B. McKinnon, Eos

"... a massive achievement, and the well-considered problems and exercises at the end of each chapter will be particularly useful to students and to test one's own understanding."

William B. Hubbard, Physics Today

I Introduction

I.1 Inventory of the Solar System

- 1.1.1 Giant Planets
- 1.1.2 Terrestrial Planets
- 1.1.3 Minor Planets and Comets
- 1.1.4 Satellite and Ring Systems
- 1.1.5 Tabulations
- 1.1.6 Heliosphere

I.2 Planetary Properties

- 1.2.1 Orbit
- 1.2.2 Mass
- 1.2.3 Size
- 1.2.4 Rotation
- 1.2.5 Shape
- 1.2.6 Temperature
- 1.2.7 Magnetic Field
- 1.2.8 Surface Composition
- 1.2.9 Surface Structure
- 1.2.10 Atmosphere
- 1.2.11 Interior

Problems

20

2 Dynamics

2.1 The Two-Body Problem

22

22

2.1.1 Kepler's Laws of Planetary Motion

22

2.1.2 Newton's Laws of Motion, Gravity

22

2.1.3 Orbital Elements

23

2.1.4 Bound and Unbound Orbits

24

2.1.5 Interplanetary Spacecraft

25

2.1.6 Gravitational Potential

26

2.2	The Three-Body Problem	26
2.2.1	<i>Jacobi Constant, Lagrangian Points</i>	27
2.2.2	<i>Horseshoe and Tadpole Orbits</i>	28
2.2.3	<i>Hill Sphere</i>	29
2.2.4	<i>Distant Planetary Satellites and Quasi-Satellites</i>	30
2.3	Perturbations and Resonances	30
2.3.1	<i>Regular and Chaotic Motion</i>	31
2.3.2	<i>Resonances</i>	32
2.3.3	<i>The Resonance Overlap Criterion and Jacobi–Hill Stability</i>	34
2.4	Stability of the Solar System	34
2.4.1	<i>Secular Perturbation Theory</i>	34
2.4.2	<i>Chaos and Planetary Motions</i>	35
2.4.3	<i>Survival Lifetimes of Small Bodies</i>	37
2.5	Orbits About an Oblate Planet	37
2.5.1	<i>Gravitational Potential</i>	37
2.5.2	<i>Precession of Particle Orbits</i>	39
2.5.3	<i>Torques Upon an Oblate Planet</i>	39
2.6	Tides	39
2.6.1	<i>The Tidal Force and Tidal Bulges</i>	40
2.6.2	<i>Tidal Torque</i>	41
2.6.3	<i>Tidal Heating</i>	44
2.7	Dissipative Forces and the Orbits of Small Bodies	45
2.7.1	<i>Radiation Pressure (micrometer grains)</i>	45
2.7.2	<i>Poynting–Robertson Drag (small macroscopic particles)</i>	46
2.7.3	<i>Yarkovsky Effect (meter–ten-kilometer objects)</i>	47
2.7.4	<i>YORP Torques (Rotation of Asymmetric Bodies)</i>	47
2.7.5	<i>Corpuscular Drag (submicrometer dust)</i>	48
2.7.6	<i>Gas Drag</i>	48
2.8	Orbits About a Mass-Losing Star	49
	Further Reading	50
	Problems	50
3	Solar Heating and Energy Transport	56
3.1	Energy Balance and Temperature	56
3.1.1	<i>Thermal (Blackbody) Radiation</i>	57
3.1.2	<i>Temperature</i>	58
3.2	Energy Transport	60
3.2.1	<i>Conduction</i>	61
3.2.2	<i>Convection</i>	63
3.2.3	<i>Radiation</i>	64
3.3	Atmosphere in Radiative Equilibrium	68
3.3.1	<i>Thermal Profile</i>	68
3.3.2	<i>Greenhouse Effect</i>	69
3.4	Radiative Transfer in a Surface	71
	Further Reading	72
	Problems	72
4	Planetary Atmospheres	76
4.1	Density and Scale Height	76
4.2	Thermal Structure	76
4.2.1	<i>Sources and Transport of Energy</i>	78
4.2.2	<i>Observations of Thermal Profiles</i>	80

4.3	Atmospheric Composition	83
4.3.1	Spectra	84
4.3.2	Line Profiles	86
4.3.3	Observations	87
4.4	Clouds	100
4.4.1	Wet Adiabatic Lapse Rate	101
4.4.2	Clouds on Earth	102
4.4.3	Clouds on Other Planets	103
4.5	Meteorology	106
4.5.1	Winds Forced by Solar Heating	106
4.5.2	Wind Equations	108
4.5.3	Horizontal Winds	109
4.5.4	Storms	111
4.5.5	Observations: Bodies with Surfaces	115
4.5.6	Observations: Giant Planets	119
4.6	Photochemistry	126
4.6.1	Photolysis and Recombination	126
4.6.2	Photoionization: Ionospheres	130
4.6.3	Electric Currents	134
4.6.4	Airglow and Aurora	135
4.7	Molecular and Eddy Diffusion	138
4.7.1	Diffusion	138
4.7.2	Eddy Diffusion Coefficient	139
4.8	Atmospheric Escape	140
4.8.1	Thermal (Jeans) Escape	140
4.8.2	Nonthermal Escape	141
4.8.3	Blowoff and Impact Erosion	142
4.9	History of Secondary Atmospheres	143
4.9.1	Formation	143
4.9.2	Climate Evolution	144
4.9.3	Summary	147
	Further Reading	147
	Problems	148
5	Planetary Surfaces	152
5.1	Mineralogy and Petrology	153
5.1.1	Minerals	153
5.1.2	Rocks	155
5.2	Cooling of a Magma	159
5.2.1	Phases of the Magma	159
5.2.2	Crystallization and Differentiation	162
5.3	Surface Morphology	163
5.3.1	Gravity and Rotation	163
5.3.2	Tectonics	164
5.3.3	Volcanism	167
5.3.4	Atmospheric Effects on Landscape	170
5.4	Impact Cratering	174
5.4.1	Crater Morphology	175
5.4.2	Crater Formation	177
5.4.3	Impact Modification by Atmospheres	184
5.4.4	Spatial Density of Craters	185
5.4.5	Comet SL9 Impacts Jupiter	190
5.4.6	Mass Extinctions	192

5.5 Surface Geology of Individual Bodies	194
5.5.1 <i>Moon</i>	196
5.5.2 <i>Mercury</i>	197
5.5.3 <i>Venus</i>	200
5.5.4 <i>Mars</i>	204
5.5.5 <i>Satellites of Jupiter</i>	216
5.5.6 <i>Satellites of Saturn</i>	226
5.5.7 <i>Satellites of Uranus</i>	234
5.5.8 <i>Satellites of Neptune</i>	236
Further Reading	238
Problems	238
6 Planetary Interiors	241
6.1 Modeling Planetary Interiors	241
6.1.1 <i>Hydrostatic Equilibrium</i>	242
6.1.2 <i>Constituent Relations</i>	242
6.1.3 <i>Equation of State</i>	247
6.1.4 <i>Gravity Field</i>	247
6.1.5 <i>Internal Heat: Sources and Losses</i>	254
6.2 Interior Structure of the Earth	258
6.2.1 <i>Seismology</i>	258
6.2.2 <i>Density Profile</i>	261
6.3 Interiors of Other Solid Bodies	265
6.3.1 <i>Moon</i>	265
6.3.2 <i>Mercury</i>	267
6.3.3 <i>Venus</i>	268
6.3.4 <i>Mars</i>	270
6.3.5 <i>Satellites of Giant Planets</i>	271
6.4 Interior Structure of the Giant Planets	274
6.4.1 <i>Modeling the Giant Planets</i>	274
6.4.2 <i>Jupiter and Saturn</i>	275
6.4.3 <i>Uranus and Neptune</i>	276
Further Reading	278
Problems	279
7 Magnetic Fields and Plasmas	283
7.1 The Interplanetary Medium	283
7.1.1 <i>Solar Wind</i>	283
7.1.2 <i>Modeling the Solar Wind</i>	289
7.1.3 <i>Maxwell's Equations</i>	290
7.1.4 <i>Solar Wind–Planet Interactions</i>	291
7.2 Magnetic Field Configuration	293
7.2.1 <i>Dipole Magnetic Field</i>	294
7.2.2 <i>Multipole Expansion</i>	295
7.3 Particle Motions in Magnetospheres	296
7.3.1 <i>Adiabatic Invariants</i>	296
7.3.2 <i>Drift Motions in a Magnetosphere</i>	298
7.3.3 <i>Electric Fields</i>	300
7.3.4 <i>Particle Sources and Sinks</i>	303
7.3.5 <i>Particle Diffusion</i>	304
7.4 Magnetospheric Wave Phenomena	304
7.4.1 <i>General Wave Theory</i>	305
7.4.2 <i>MHD, Plasma, and Radio Waves</i>	305
7.4.3 <i>Radio Emissions</i>	306

7.5	Magnetospheres of Individual Bodies	309
7.5.1	<i>Earth</i>	309
7.5.2	<i>Mercury</i>	313
7.5.3	<i>Venus, Mars, the Moon</i>	314
7.5.4	<i>Jupiter</i>	316
7.5.5	<i>Saturn</i>	325
7.5.6	<i>Uranus and Neptune</i>	329
7.6	Generation of Magnetic Fields	332
7.6.1	<i>Magnetic Dynamo Theory</i>	332
7.6.2	<i>Variability in Magnetic Fields</i>	333
	Further Reading	333
	Problems	334
