<b>Introduction</b>	<b>vii</b>
<b>1 Interactions of ion beams with polymers: the physical picture</b>	<b>1</b>
References	8
<b>2 Ion implanters</b>	<b>9</b>
Development of ion implanters	9
Sheath dynamics in plasma immersion ion implantation	13
Plasma immersion ion implantation of insulators	15
Estimating fluence and practical process considerations	20
References	26
<b>3 Interactions of energetic ions with polymers: chemical picture</b>	<b>29</b>
References	53
<b>4 Structure of polymers after ion beam treatment</b>	<b>69</b>
Color changes	69
Darkening as a measure of fluence	72
Carbonization of the surface layer	75
Raman spectroscopy analysis of the modified layer	79
Electron spin resonance spectroscopy analysis of structural changes	86
Fourier-transform infrared spectroscopy analysis of structural changes	91
Changes in surface energy	107
X-ray photoemission spectroscopy analysis of structural changes	108
X-ray diffraction for crystalline fractions	112
Analysis of cross-linking by gel-fraction measurements	113
Effects of structural changes on mechanical properties	121
Summary	125
References	127
<b>5 Wetting</b>	<b>129</b>
Wettability and surface energy: theory and measurement	129
Modification of wettability of polymers using ion implantation	131
Applications and relevant theoretical aspects of surface wetting	139
References	142
