Preface xiii

Chapter 1

The Power of Bacteria 1

Why Are Bacteria Once Again in the Public Health Spotlight? 1

Bacteria, an Ancient Life Form 2

Pressing Current Infectious Disease Issues 4

Emerging and Reemerging Infectious Diseases 4

Food-Borne and Water-Borne Infections 4

Modern Medicine as a Source of New Diseases 6

Postsurgical and Other Wound Infections 6

Bioterrorism 8

A New Respect for Prevention 8

Surveillance: an Early-Warning System 9

Making Hospitals Safe for Patients 9

And Now for Some Really Good News: You've Got a Bacterial Infection! 10

The *H. pylori* Revolution 10

The Aftermath 11

Microbiota Shift Diseases 11

Genomics 12

Modeling the Host-Pathogen Interaction in Experimental Animals 13

Correlation Studies 13

A Brave New World of Pathogenesis Research 13

SELECTED READINGS 14

QUESTIONS 15

Chapter 2

Skin and Mucosa: the First Lines of Defense against Bacterial Infections 16

Barriers: Skin and Mucosal Membranes 16

Defenses of the Skin 18

Epidermis 18

Normal Microbiota 19

Defenses of the Dermis 20

Defenses of Mucosal Surfaces 21

Special Defenses of the Gastrointestinal Tract 23

Models for Studying Breaches of Barrier Defenses 26

SELECTED READINGS 26

QUESTIONS 27

Chapter 3

The Innate Immune System: Always on Guard 28

Triggering Innate Immune Defenses 28

Phagocytes: Powerful Defenders of Blood and Tissue 28

Inflammation and Collateral Damage 36

NK Cells 37

The Complement Cascade 38

Characteristics and Roles of Complement Proteins and the Complement Cascade 38

Roles of Cytokines and Chemokines in Directing the Phagocyte Response 42

Other Activities of Cytokines 46

The Dark Side of the Innate Defenses: Septic Shock 47

SELECTED READINGS 50

QUESTIONS 50

Chapter 4

The Second Line of Defense: Antibodies and Cytotoxic T Cells 51

Antibodies 52

Characteristics of Antibodies and Their Diverse Roles in Preventing Infection 52

Serum Antibodies 54

Secretory Antibodies—Antibodies That Protect Mucosal Surfaces 56

Affinity and Avidity 57

CTLs 57

Production of Antibodies and Activated CTLs 58

Processing of Protein Antigens by DCs 58

Interaction between APCs and T Cells: the T-Cell-Dependent Response 61

The Th1/Th2 View of the Adaptive Immune System 62

Production of Antibodies by B Cells 64

Links between the Innate and Adaptive Defense Systems 65

T-Cell-Independent Antibody Responses 65

Mucosal Immunity 66

Development of the Adaptive Response System from Infancy to Adulthood 69

Adaptive Defense Systems in Nonmammals 70

The Dark Side of the Adaptive Defenses—Autoimmune Disease 70

SELECTED READINGS 71

QUESTIONS 71

SOLVING PROBLEMS IN BACTERIAL PATHOGENESIS 72

Chapter 5

The Normal Human Microbiota 73

Importance of the Normal Microbial Populations (Microbiota) of the Human Body 73

Nucleic Acid-Based Approaches to Characterization of the Microbiota 74

Taking a Microbial Census by Using Microbial rRNA Sequence Analysis 74

Beyond the Metagenome 90

Overview of the Human Microbiota 90

Skin Microbiota 90

Oropharyngeal Microbiota 90

Microbiota of the Small Intestine and Colon 91

Microbiota of the Vaginal Tract 94

The Forgotten Eukaryotes 94

SELECTED READINGS 95

QUESTIONS 95

SOLVING PROBLEMS IN BACTERIAL PATHOGENESIS 96

Chapter 6

Microbes and Disease: Establishing a Connection 98

History and Relevance of Koch's Postulates 98

The First Postulate: Association of the Microbe with Lesions of the Disease 99

The Second Postulate: Isolating the Bacterium in Pure Culture 100

The Third Postulate: Showing that the Isolated Bacterium Causes Disease in Humans or Animals 101

The Fourth Postulate: Reisolating the Bacterium from the Intentionally Infected Animal 102

Modern Alternatives To Satisfy Koch's Postulates 102

Is a Fifth Postulate Needed? 103

The Microbiota Shift Disease Problem 106

Concepts of Disease 106

Varieties of Human-Microbe Interactions	106
Views of the Microbe-Human Interaction	106
Molecular Koch's Postulates	107
Virulence as a Complex Phenomenon	107
SELECTED READINGS	108
QUESTIONS	108
SOLVING PROBLEMS IN BACTERIAL PATHOGENESIS	109

Chapter 7

Mechanisms of Genetic Modification and Exchange: Role in Pathogen Evolution 111

Adapt or Perish 111

Acquiring New Virulence Traits by HGT 111

Mechanisms of Genetic Change and Diversification 112

Point Mutations, Gene Deletions or Duplications, and Chromosomal Rearrangements 112

Phase Variation 112

Antigenic Variation 115

HGT: Mobile Genetic Elements 116

Natural Transformation 116

Conjugation: Plasmids and Transposons 117

Phage Transduction 119

PAIs and Pathogen Evolution 121

Properties of PAIs 121

Pathogen Evolution in Quantum Leaps 123

SELECTED READINGS 126

QUESTIONS 127

SOLVING PROBLEMS IN BACTERIAL PATHOGENESIS 128

Chapter 8

Identification of Virulence Factors: Measuring Infectivity and Virulence 130

Animal Models of Infection 131

Human Volunteers 131

Nonhuman Animal Models 132

Measuring Bacterial Infection in Animal Models 135

Ethical Considerations 135

LD₅₀ and ID₅₀ Values 137

Competition Assays 138

Tissue Culture and Organ Culture Models 139

Tissue Culture Models 139

Gentamicin Protection Assay 141

Plaque Assay for Cell-to-Cell Spread 143

Fluorescence Microscopy Techniques for Assessing Effects of Pathogens on Host Cells 143

Organ Culture Models 144

The Continuing Need for Reliable and Plentiful Information about Disease Pathology 145

SELECTED READINGS 145

QUESTIONS 146

SOLVING PROBLEMS IN BACTERIAL PATHOGENESIS 146

Chapter 9

Identification of Virulence Factors: Molecular Approaches for Bacterial Factors 149

Traditional Biochemical and Genetic Approaches 151

Traditional Biochemical Approaches 151

Molecular Genetic Approaches 152

Transposon Mutagenesis 152

Measuring Virulence Gene Regulation: Gene Fusions 154

Finding Genes That Are Expressed In Vivo 156

Signature-Tagged Mutagenesis 156

IVET 159

Genomic Methods for Identifying Virulence Genes 165

GSH 165

IVIAT 167

Microarrays 169

Comparative Genomics for Vaccines and Therapeutics 171

The Importance of Bacterial Physiology 171

SELECTED READINGS 174

QUESTIONS 175

SOLVING PROBLEMS IN BACTERIAL PATHOGENESIS 176

Chapter 10

Identification of Virulence Factors: Molecular Approaches for Host Factors 178

Approaches to Identifying Host Factors Required for Infection 178

Transgenic Animal Models 178

Comparative Genomics of the Host Response 180

Transcriptional and Proteomic Profiling To Identify Host Factors Required for Infection 180

Using Genome-Wide RNAi Screening To Identify Host Factors Required for Infection 184

Using the Host's Immune Response To Find Bacterial Origins of Disease 186

The Promise and the Caution 187

SELECTED READINGS 187

QUESTIONS 188

SOLVING PROBLEMS IN BACTERIAL PATHOGENESIS 188

Chapter 11

Bacterial Strategies for Evading or Surviving Host Defense Systems 193

Overview of Bacterial Defense Strategies 193

Preinfection 196

Survival in the External Environment 196

Biofilms 196

Motility and Chemotaxis 197

Colonization of Host Surfaces 199

Penetrating Intact Skin 199

Penetrating the Mucin Layer 199

Secretory IgA Proteases 200

Resistance to Antibacterial Peptides 200

Iron Acquisition Mechanisms 201

Adherence 203

Evading the Host Immune Response 210

Avoiding Complement and Phagocytosis 210

Invasion and Uptake by Host Cells 213

Surviving Phagocytosis 215

Evading the Host's Antibody Response 219

Cell-to-Cell Spread 220

Tissue Penetration and Dissemination 220

Beyond Virulence Factors 221

SELECTED READINGS 222

QUESTIONS 223

SOLVING PROBLEMS IN BACTERIAL PATHOGENESIS 224

Chapter 12

Toxins and Other Toxic Virulence Factors 225

Bacterial Toxins 225

Transparent Mechanisms, Mysterious Purposes 225

Characteristics and Nomenclature 230

Nonprotein Toxins 231

Protein Exotoxins 233

Protein Exoenzymes/Effectors 239

Examples of Diseases Mediated by Toxins 239

DT 239

Botulism and Tetanus 246

Immunotoxins: Toxin-Based Therapeutics and Research Tools 251

SELECTED READINGS 252

QUESTIONS 252

SOLVING PROBLEMS IN BACTERIAL PATHOGENESIS 253

Chapter 13

Delivery of Virulence Factors 256

Bacterial Secretion Systems and Virulence 256

Common Secretory Systems 257

Secretion Systems Specific to Gram-Negative Bacteria 259

Sec-Dependent Secretion Systems 259

Sec-Independent Secretion Systems 260

Secretion Systems Specific to Gram-Positive Bacteria 267

CMT and ExPortal 267

T7SS 268

Secretion Systems as Vaccine and Therapeutic Targets 269

SELECTED READINGS 269

QUESTIONS 270

SOLVING PROBLEMS IN BACTERIAL PATHOGENESIS 270

Chapter 14

Virulence Regulation 275

Mechanisms of Virulence Gene Regulation 275

Types of Regulation 276

Gene Rearrangements 276

Transcriptional Regulation 277

cis-Acting RNA Thermosensors 287

Translational Regulation 289

Quorum Sensing 292

Quorum Sensing in Gram-Negative Bacteria 297

Quorum Sensing in Gram-Positive Bacteria 299

New Theory: Antibiotics and Quorum Sensing 299

SELECTED READINGS 307

QUESTIONS 307

SOLVING PROBLEMS IN BACTERIAL PATHOGENESIS 309

SPECIAL GLOBAL-PERSPECTIVE PROBLEMS:

INTEGRATING CONCEPTS IN PATHOGENESIS 313

Chapter 15

Antimicrobial Compounds 317

Antimicrobial Compounds: the Safety Net of Modern Medicine 317

Importance of Antimicrobial Compounds 317

Killing versus Inhibiting Growth 318

Antiseptics and Disinfectants 319

Mechanisms of Action 319

Resistance to Antiseptics and Disinfectants 321

Antibiotics 321

Characteristics of Antibiotics 321

Tests Used To Assess Antibiotics 323

The Process of Antibiotic Discovery 324

Finding New Targets by Exploiting Genomics 327

The Economics of Antibiotic Discovery 328

Mechanisms of Antibiotic Action 330

Targets of Antibiotic Action 330

Cell Wall Synthesis Inhibitors	331
Protein Synthesis Inhibitors	334
Antibiotics That Target DNA Synthesis	337
Antibiotics That Inhibit RNA Synthesis	340
Inhibitors of Tetrahydrofolate Biosynthesis	340
The Newest Antibiotics	340
The Newest Antibiotic Targets	342
Strategies for Enhancing Antibiotic Efficacy	343
The Continuing Challenge	343
SELECTED READINGS	344
QUESTIONS	345
SOLVING PROBLEMS IN BACTERIAL PATHOGENESIS	346

Chapter 16

How Bacteria Become Resistant to Antibiotics 347

The Dawning of Awareness 347

How Did We Get to Where We Are? 349

Mechanisms of Antibiotic Resistance 350

Overview of Resistance Mechanisms	350
Limiting Access of the Antibiotic	350
Enzymatic Inactivation of the Antibiotic	351
Modification or Protection of the Antibiotic Target	354
Failure To Activate an Antibiotic	357
Regulation of Resistance Genes	357
Multiple Resistance and Genetic Linkage	361

Antibiotic Tolerance 362

Horizontal Gene Transfer of Resistance Genes 362

Propagating and Maintaining Antibiotic Resistance through Selective Pressure and Changes in Fitness 365

Will We Return to the Preantibiotic Era? 366

SELECTED READINGS 368

QUESTIONS 368

SOLVING PROBLEMS IN BACTERIAL PATHOGENESIS 369

SPECIAL GLOBAL-PERSPECTIVE PROBLEM: INTEGRATING CONCEPTS IN PATHOGENESIS 370

Chapter 17

Vaccination—an Underappreciated Component of the Modern Medical Armamentarium 373

Vaccines: a Major Health Care Bargain 373

The Antivaccination Movement 374

The Success Stories 376

Subunit Vaccines 376

Conjugate Vaccines 379

The Less-than-Success Stories 379

What Makes an Ideal Vaccine? 383

Approaches to Enhancing Immunogenicity 384

Eliciting the Correct Type of Immune Response 384

Adjuvants 384

New Strategies 386

Programming Adaptive Immunity 386

Targeting Mucosal Immunity 388

DNA Vaccine Technology 392

Storage of Vaccines 392

Immunization Programs 392

Passive Immunization 393

SELECTED READINGS 393

QUESTIONS 394

SOLVING PROBLEMS IN BACTERIAL PATHOGENESIS 395

SPECIAL GLOBAL-PERSPECTIVE PROBLEM: INTEGRATING CONCEPTS IN PATHOGENESIS 397

Chapter 18

The Gram-Positive Opportunistic Pathogens 399

What Is an Opportunist? 399

Shared Characteristics 400

Why Commensal Bacteria Act as Pathogens 400

Examples of Notable Gram-Positive Opportunists 401

S. aureus: a Toxically Loaded Commensal 401

S. epidermidis: an Accidental Pathogen 411

S. pneumoniae: a Commensal Nicknamed “the Captain of All the Men of Death” 414

C. difficile (“*C. diff.*”): a True Opportunist 423

That’s Not All, Folks 431

SELECTED READINGS 432

QUESTIONS 433

SOLVING PROBLEMS IN BACTERIAL PATHOGENESIS 433

Chapter 19

The Gram-Negative Opportunistic Pathogens 437

Jumping Over the (Cell) Wall: Gram-Negative Bacteria Can Be Opportunistic Pathogens Too 437

The Dark Side of Some Normal Inhabitants of the Human Body 438

The Ever-Changing Face of *E. coli* 438

B. fragilis Internal Abscesses 441

P. gingivalis and Periodontal Disease 442

Normal Soil Inhabitants Weigh In as Opportunists 443

P. aeruginosa Infections 443

B. cenocepacia—*P. aeruginosa*’s Evil Twin 446

A. baumannii—an Emerging Threat from the Iraq War 446

Don't Forget the Arthropods 447

Ehrlichia spp. 447

The Broader View 448

SELECTED READINGS 449

QUESTIONS 449

SOLVING PROBLEMS IN BACTERIAL PATHOGENESIS 450

SPECIAL GLOBAL-PERSPECTIVE PROBLEM: INTEGRATING CONCEPTS IN PATHOGENESIS 452

Chapter 20

Biosecurity: the Changing Roles of Microbiologists in an Age of Bioterrorism and Emerging Diseases 457

When Microbiologists Are Called to the Front Line 457

Tracking Down a Bioterrorist 458

Unintentional or Deliberate? 459

Timing 462

Tracing the Source 462

Lessons Learned 462

The "Top Four" Bioterror Agents 465

B. anthracis Spores 465

Smallpox 466

Y. pestis 467

Botulinum Neurotoxin 468

What If Bioterrorists Came Up with Something Completely New? 468

Biosecurity in an Ever-Changing World 469

Food Safety and Biosecurity 470

The Case for Food Irradiation 470

The Future of Biosecurity 472

SELECTED READINGS 473

QUESTIONS 473

SOLVING PROBLEMS IN BACTERIAL PATHOGENESIS 474

Glossary 477

Index 509
