List of Tables xii

Preface xv

PART I INORGANIC IONS AND SIMPLE MOLECULES IN CHEMISTRY AND IN OUR ENVIRONMENT 1

CHAPTER 1 Periodic Trends in Fundamental Properties of Atoms and Simple Ions 3

- 1.1 Why Study Inorganic Chemistry? 3
- 1.2 The Periodic Table 5
- 1.3 Quantum Mechanics: Waves/Particles 7
- 1.4 Electrons in Atoms: Angular Part of the Electronic Wave Function 10
- 1.5 Radial Part of the Wave Function 15
- 1.6 Shielding and Slater's Rules 18
- 1.7 Characteristic Valence Electron Configurations 21
- 1.8 Valence Electron Configurations, Charges, and Oxidation Numbers of Ions 27
- 1.9 Types of Atomic Radii, Their Periodic Trends, and Reasons for the Trends 30
- 1.10 Periodic Trends in Electronegativities of Atoms and Their Explanation 36
- 1.11 *Relativistic Effects on Orbitals 39
- 1.12 *Predicting the Chemistry of Superheavy Elements 41

CHAPTER 2 Monoatomic Ions and Their Acid–Base Reactivity 55

- 2.1 Hydration of Cations 55
- 2.2 Acidity of Cations 56
- 2.3 Classification of Cations by Acidity Category 61
- 2.4 Halides that Fail to Undergo Hydrolysis: Oxo Cations 67
- 2.5 Hydration and Hydrolysis of Monoatomic Nonmetal Anions 68
- 2.6 Predominance Diagrams for Anions: Partially Protonated Anions 73
- 2.7 Acidic Nonmetal Hydrides and Basic Metal Oxides 74
- 2.8 Nomenclature 79

CHAPTER 3 Polyatomic Ions and Their Acid–Base Properties WITH APPLICATIONS TO ENVIRONMENTAL CHEMISTRY AND ANALYTICAL CHEMISTRY 89

- 3.1 Covalent Bond Types and Periodicity of Bond Energies 89
- 3.2 Covalent Bonding to Ions: The Lewis Acid–Base Concept and Complex Ions 98
- 3.3 Lewis Structures, Coordination Numbers, and Fluoro Anions 101
- 3.4 The Shapes of *p*-Block Molecules and Complex Ions 105
- 3.5 Formulas of Oxo Anions 111
- 3.6 Basicity of Oxo Anions 116
- 3.7 Protonation of Oxo Anions: Hydroxo Anions and Oxo Acids 120
- 3.8 Most Common Forms of the Elements in Natural Waters 125
- 3.9 *Nomenclature of Fluoro and Oxo Anions and Acids 129
- 3.10 *Lewis Structures and Oxidation Numbers 132

[†] Starred sections can readily be omitted at instructor's discretion.

CHAPTER 4 Ionic Solids and Precipitation Reactions of Hydrated Ions WITH APPLICATIONS TO ANALYTICAL CHEMISTRY, ORGANIC CHEMISTRY, AND WATER CHEMISTRY 149

- 4.1 Solubility Rules for Salts of Oxo and Fluoro Anions 149
- 4.2 Thermodynamics and Solubility Rules for Salts 154
- 4.3 Entropy and Precipitation: The Structure of Hydrated Ions 157
- 4.4 Nonacidic Cations, Nonbasic Anions, and the Structure of Liquid Water 161
- 4.5 Enthalpy and Precipitation: The Importance of Lattice Energies 162
- 4.6 Ionic Solids: Coulombic Attractions and Lattice Energies 164
- 4.7 Radius Ratios and Lattice Types 167
- 4.8 Stability of Lattices and the Solubility Rules 171
- 4.9 *Writing and Interpreting Net Ionic Equations 173
- 4.10 *Nonaqueous Solvents for Ionic or Ionizable Compounds 175

CHAPTER 5 Trends in Coordination Equilibria WITH APPLICATIONS TO BIOCHEMISTRY, ENVIRONMENTAL CHEMISTRY, GEOCHEMISTRY, AND MEDICINAL CHEMISTRY 191

- 5.1 Classification of Ligands 191
- 5.2 Chelate and Macrocyclic Effects 197
- 5.3 The Hard and Soft Acid–Base Principle 198
- 5.4 Relative and Borderline Hardness and Softness 201
- 5.5 The HSAB Principle and Polar Covalent Bonding 204
- 5.6 The Need for Two Parameters: Softness and Strength 206
- 5.7 Applications of HSAB: Solubility of Halides and Chalcogenides 207
- 5.8 Applications of HSAB: The Qualitative Analysis Scheme for Metal Ions 209
- 5.9 Applications of HSAB: The Geochemical Classification and Differentiation of the Elements 212
- 5.10 *Metal Ions in Biochemistry 215
- 5.11 Applications of HSAB: Biological Functions and Toxicology of the Elements 220
- 5.12 *Applications of HSAB and Chelation: Medicinal Chemistry 225

CHAPTER 6 Principles of Oxidation–Reduction Reactivity WITH APPLICATIONS TO CHEMICAL SAFETY, ENVIRONMENTAL CHEMISTRY, AND INDUSTRIAL CHEMISTRY 243

- 6.1 Standard Reduction Potentials and Their Diagrammatic Representation 243
- 6.2 Explosives, Flammable Compounds, and the Handling of Strong Reducing Agents 254
- 6.3 *Redox Predominance Diagrams: Construction; Species that Disproportionate; Nonstandard Conditions 261
- 6.4 Charge-Transfer Spectra and Marginal Redox Stability 264
- 6.5 Periodicity in the Activity of Metals and the Reduction of Metal Ions 266
- 6.6 *Hard and Soft Acids and Bases and Redox Chemistry 270
- 6.7 Redox Chemistry of the Nonmetals 273
- 6.8 Industrial Processes for Extracting Elements from Their Ores 276
- 6.9 Effects of Concentration and pH on Redox Chemistry: Pourbaix Diagrams 287
- 6.10 *pH Effects on Redox Chemistry: The Synthesis of Oxo Anions and Acids and Corrosion of Metals 297

CHAPTER 7 Thermochemical Analyses of Reactivity Trends 315

- 7.1 Thermochemical Analysis of Redox Reactions: Born–Haber Cycle 315
- 7.2 Thermochemical Analysis of the Activity Series of the Elements 323
- 7.3 Significance of Atomization Energies in Redox Chemistry 325
- 7.4 Periodicity and Significance of Ionization Energies and Electron Affinities 327
- 7.5 Polar Covalent Bond Energies and Pauling Electronegativities 331
- 7.6 Effects of Changing Substituents and Oxidation Numbers on Electronegativities 337

- 7.7 *Definitions of Electronegativity and Hardness Related to Ionization Energies and Electron Affinities 339
- 7.8 *Thermodynamics of the Lewis Acid–Lewis Base Interaction: Drago's E , C , and T Parameters 341

CHAPTER 8 Introduction to Transition Metal Complexes WITH APPLICATIONS TO BIOCHEMISTRY 357

- 8.1 Introduction 357
- 8.2 The Crystal Field Theory 359
- 8.3 High- and Low-Spin Electron Configurations: Magnetic Properties 362
- 8.4 Electronic Absorption Spectra of Complex Ions 365
- 8.5 The Spectrochemical Series of Ligands and the Effects of Covalency 369
- 8.6 Thermodynamic and Structural Consequences of Crystal Field Effects 374
- 8.7 Crystal Field Splitting in Complexes of Other Geometries 380
- 8.8 Geometric Preferences: Rates and Mechanisms of Ligand Exchange 387
- 8.9 *Syntheses of d -Block Complexes 391
- 8.10 *Bioinorganic Chemistry and Crystal Field Theory: Heme and Hemoglobin 395
- 8.11 *Nomenclature of Coordination and Organometallic Compounds 398

PART II INORGANIC MOLECULES AND MATERIALS: THEORY AND APPLICATIONS 417

CHAPTER 9 Symmetry WITH APPLICATIONS TO ART, ENVIRONMENTAL CHEMISTRY, AND ORGANIC CHEMISTRY 419

- 9.1 Symmetry Operations and Elements 419
- 9.2 Molecular Point Groups 425
- 9.3 Elementary Applications of Symmetry: Molecular Polarity, Chirality, and Fluxionality 430
- 9.4 Character Tables for Symmetry Point Groups 438
- 9.5 *Applications of Symmetry: Infrared and Raman Spectra 443

CHAPTER 10 Molecular Orbital Theory WITH APPLICATIONS TO ORGANIC CHEMISTRY AND MATERIALS SCIENCE 459

- 10.1 Molecular Orbital Theory for Homonuclear Diatomic Molecules 459
- 10.2 Bond Energies and Lengths, Spectroscopy, and Orbital Mixing in Homonuclear Diatomic Molecules 468
- 10.3 Heteroatomic Diatomic Molecules and Ions 476
- 10.4 Molecular Ionization Energies, Electron Affinities, Electronegativities, and Hardness 483
- 10.5 Molecular Orbital Theory for Linear Molecules 485
- 10.6 Molecular Orbital Theory for Cyclic Molecules: Generator Orbitals 492
- 10.7 *Orbital Symmetry Rules for Concerted Reactions 498
- 10.8 Molecular Orbitals for D_{nh} Molecules 501
- 10.9 Molecular Orbitals for Three-Dimensional Molecules in Higher Order Point Groups 505
- 10.10 *Molecular Orbitals for Cluster Compounds 510
- 10.11 *Molecular Orbitals for Metals 513

CHAPTER 11 Organometallic Chemistry of the d -Block Elements WITH APPLICATIONS TO INDUSTRIAL CHEMISTRY, ORGANIC CHEMISTRY, BIOCHEMISTRY, AND ENVIRONMENTAL CHEMISTRY 531

- 11.1 Organometallic Compounds of the d -Block Metals: The 18-Electron Rule 531
- 11.2 Mononuclear Metal Carbonyls and Related Organometallics 534

- 11.3 Metal Complexes of π -Donor Ligands 539
- 11.4 Other Ligands Forming One σ Bond in Organometallics: Dinuclear and Polynuclear Organometallics 548
- 11.5 Bridging Ligands: Alkynes and Carbonyls 556
- 11.6 Ligands Forming Two or More Bonds to a Metal or Metals: The Isolobal Analogy 559
- 11.7 Reaction Types of d -Block Organometallic Compounds 563
- 11.8 Catalytic Cycles 573
- 11.9 *Organometallic Catalysis in Biochemistry and Environmental Chemistry 581

CHAPTER 12 The Elements and Their Physical Properties WITH APPLICATIONS TO MATERIALS SCIENCE 595

- 12.1 Interunit Forces and Physical Properties 595
- 12.2 Physical Properties, Allotropes, and Uses of the Nonmetallic Elements 599
- 12.3 Metals and Alloys 611
- 12.4 Magnetism, Electrical Conductivity, and Semiconduction 617
- 12.5 Homopolyatomic Anions and Cations of the Elements: Metal Complexes 624
- 12.6 Heterogeneous Catalysis by Metals 631
- 12.7 Metallic Chains, Sheets, and Clusters 635

CHAPTER 13 Oxides of the Elements WITH APPLICATIONS TO GEOCHEMISTRY, ENVIRONMENTAL CHEMISTRY, AND MATERIALS SCIENCE 657

- 13.1 Physical States and Structures of the Fluorides and Oxides of the Elements 657
- 13.2 Covalent Oxides: Periodic Trends in Structure and Physical State 667
- 13.3 Acidity, Solubility, Practical Uses, and Environmental Chemistry of Volatile Oxides and Oxo Acids 673
- 13.4 Close Packed Anions, Metal Oxides, and Electrical Conductivity of Solid Ionic Compounds 685
- 13.5 Spinel, Perovskites, High-Temperature Superconductors, and Cooperative Magnetic Properties in Mixed-Metal Oxides 691
- 13.6 Polysilicates: Basic Structural Types, Uses, and Chemistry 697
- 13.7 Aluminosilicates 705
- 13.8 *Oligomeric Polyoxometallate Anions of Other p - and d -Block Elements: Selected Structures and Uses 711

CHAPTER 14 The Halides, Nitrides, and Sulfides of the Elements WITH APPLICATIONS TO MATERIALS SCIENCE AND BIOCHEMISTRY 729

- 14.1 Structural Features of Halides 729
- 14.2 Physical States and Physical Properties of Halides 738
- 14.3 Methods of Synthesis of Halides 741
- 14.4 Reactions and Uses of Halides 744
- 14.5 *Catenated and Cluster Halides 748
- 14.6 More Complex Oxygen Derivatives: Oxo Halides, Silicones, Inorganic Esters, Alkoxides 754
- 14.7 Nitrides and Carbides of the Elements 761
- 14.8 Sulfides, Selenides, Tellurides, and Arsenides of the Elements 767
- 14.9 Relationships among Ionic, Covalent, and Metallic Bonding 775

CHAPTER 15 Hydrides, Alkyls, and Aryls of the Elements WITH APPLICATIONS TO MATERIALS SCIENCE AND ORGANIC CHEMISTRY 789

- 15.1 Classification of Hydrides: Hydrides of Metals 789
- 15.2 Electron-Precise and Electron-Rich Molecular Hydrides 792
- 15.3 Electron-Deficient Molecular Hydrides 799
- 15.4 Syntheses of the Hydrides and Hydride Anions of the Elements 804

- 15.5 Reactions and Uses of the Hydrides 807
- 15.6 Alkyls and Aryls of the Elements: Classification and Structures 810
- 15.7 Methods of Synthesis of Alkyls and Aryls 816
- 15.8 Reactions and Uses of the Alkyls and Aryls 820
- 15.9 *Catenated Alkyls and Aryls of the *p*-Block 823
- 15.10 *Multiply Bonded and Divalent Alkyls and Aryls of the Heavier *p*-Block Elements 828

CHAPTER 16 Inorganic Reaction Mechanisms WITH APPLICATIONS TO MATERIALS SCIENCE, ORGANIC CHEMISTRY, ENVIRONMENTAL CHEMISTRY, AND BIOCHEMISTRY 839

- 16.1 Rate Laws and Stoichiometric Reaction Mechanisms for Ligand Substitution Reactions 840
- 16.2 Intimate Mechanisms for Ligand Substitution Reactions 846
- 16.3 Entering Group, Leaving Group, and Metal Effects on Ligand Substitution Rates 851
- 16.4 Spectator Ligand Effects on Ligand Substitution Rates 853
- 16.5 Classification of Redox Reaction Mechanisms 857
- 16.6 Outer-Sphere Electron-Transfer Processes 858
- 16.7 One-Electron Inner-Sphere and Long-Range Electron-Transfer Processes 861
- 16.8 Two-Electron Inner-Sphere Electron-Transfer Processes 868

CHAPTER 17 Advanced Topics: Excited Electronic States, Photochemistry, and Activated Molecules WITH APPLICATIONS TO MATERIALS SCIENCE, ATMOSPHERIC CHEMISTRY, AND BIOCHEMISTRY 879

- 17.1 Electronic States and Term Symbols 879
- 17.2 Electronic States for Diatomic Molecules and Their Consequences 885
- 17.3 Electronic States for Octahedral Complexes 887
- 17.4 Tanabe–Sugano Diagrams and Spectra of *d*-Block Complexes 889
- 17.5 Luminescence, Lasers, and Spin–Orbit Coupling 898
- 17.6 Photochemically Assisted Substitution and Redox Processes 901
- 17.7 Chlorophyll and Photosynthesis 905
- 17.8 Biochemical Oxygen Transport and Activation 906
- 17.9 Biochemical Nitrogen Activation 913

APPENDIX A: Discovery Laboratory Experiments for Part I 927

- A.1 Some Reactions of Cations 928
- A.2 Nonaqueous Reactions of Metal Ions and Compounds 929
- A.3 Some Reactions of Oxo Anions 931
- A.4 Reaction of Anions with Cations 932
- A.5 Competitive Precipitation and Complexation Reactions 933
- A.6 Periodicity in the Activity (Electromotive) Series of Metals 935
- A.7 The Widely Varying Colors of *d*-Block Metal Complexes 938

APPENDIX B: Character Tables 940

Answers to Selected Exercises 949

Index 969
