Preface	1
1 Weil algebras	5
1.1 Algebras	5
1.2 Weil algebras	6
1.3 The invertible elements	6
1.4 The order of A	7
1.5 The width of A	7
1.6 The algebra \mathbb{D}_k^r	8
1.7 A as a factor algebra	8
1.8 Reparametrizations	9
1.9 Weil (k, r) -algebras	10
1.10 Algebra homomorphisms	10
1.11 Automorphisms	11
1.12 Sums	11
1.13 Tensor products	12
1.14 Example	12
1.15 Weil algebras described in terms of germs	12
2 Weil bundles	15
2.1 A -velocities	15
2.2 Weil functors	16
2.3 The contravariant approach	16

2.4	Product preserving bundle functors	17
2.5	The coordinate expression of $T^A f$	18
2.6	Natural transformations	19
2.7	Multilinear maps	21
2.8	Natural transformations on vector spaces	22
2.9	The iteration	22
2.10	The flow natural exchange	23
2.11	Fiber products	24
2.12	Underlying functors	24
2.13	The affine structures	25
2.14	Regular A -velocities	26
2.15	Contact A -elements	27
2.16	Natural lifting of vector fields to $K^A M$	27
3	On the geometry of T^A-prolongations	29
3.1	Natural tensor fields of type $(1, 1)$	29
3.2	Natural vector fields	30
3.3	T^A -prolongation of functions and vector fields	30
3.4	Semidirect products of Lie groups	31
3.5	T^A -prolongation of Lie groups	32
3.6	T^A -prolongation of actions	33
3.7	Vector bundles	34
3.8	Principal and associated bundles	35
3.9	Some further structures	35
3.10	Tensor fields of type $(1, k)$	35
3.11	Frölicher-Nijenhuis bracket	36
3.12	Vector valued forms	37
3.13	An infinitesimal-like algorithm	38
3.14	T^A -prolongation of general connections	38

4	Product preserving bundle functors on \mathcal{FM}	41
4.1	Local categories over manifolds	41
4.2	Bundle functors	42
4.3	The functor T^μ	42
4.4	The converse assertion	43
4.5	The natural transformations	43
4.6	Fiber $(k, l; r, s)$ -velocities	44
4.7	(q, s, r) -jets of fibered morphisms	45
5	Fiber product preserving bundle functors	47
5.1	The fundamental jet functors	47
5.2	Nonholonomic jets	48
5.3	Bundle functors in the product case	49
5.4	The case of $\mathcal{M}f_m \times \mathcal{M}f$	50
5.5	One equivariant algebra homomorphism	51
5.6	The main result	53
5.7	Example	54
5.8	The flow natural map	55
5.9	The case of vertical Weil bundles	57
6	On the geometry of (A, H, t)-prolongations	59
6.1	Prolongation of vector bundles	59
6.2	Group bundles	60
6.3	Weak principal bundles	61
6.4	Principal prolongations of principal bundles	61
6.5	(A, H, t) -prolongations of principal and associated bundles .	62
6.6	The composition of two functors	63
6.7	Contact elements on fibered manifolds	65
6.8	(A, H, t) -prolongation of general connections	66

7	Some general properties of jet bundles	69
7.1	An abstract characterization of the classical r -jets	69
7.2	The homomorphic images of germs of smooth maps	70
7.3	On the jets of foliation respecting maps	72
7.4	The related Weil algebras	76
7.5	The homomorphic images of germs of foliated morphisms	78
8	Nonholonomic jets and contact elements	81
8.1	The skeletons	81
8.2	Nonholonomic r -jet categories	82
8.3	Semiholonomic 2-jets	85
8.4	Semiholonomic 3-jet categories	87
8.5	Nonholonomic $[r, s]$ -jets	89
8.6	Nonholonomic contact elements	90
8.7	Some identifications	92
8.8	The absolute contact differentiation	93
8.9	Submanifolds of Cartan spaces	94
9	Appendix: Product preserving bundle functors on $\mathcal{M}f$	97
9.1	Bundle functors on $\mathcal{M}f$	97
9.2	$F\mathbb{R}$ is a vector space	98
9.3	$F\mathbb{R}$ is a Weil algebra	98
9.4	F is a Weil functor	99
	Bibliography	99
	Index	104
