

CHAPTER 1 INTRODUCTION

1

1.1	Organization and Content of the Text	1
1.2	Social Importance and Engineering Relevance	2
1.2.1	Water Quantity	2
1.2.2	Water Quality	3
1.3	Water Budget and Mass Balance	3
1.3.1	Global Water Budget	4
1.3.2	Geographic Area Water Budget	5
1.4	Hydrologic Cycle	6
1.4.1	The Hydrologic Cycle as a Mass Balance	7
1.4.2	Surface Water Supplies	7
1.4.3	Rainfall Excess	8
1.5	Units of Measurement	10
1.6	Computation Aids	12
1.7	Computer Programs	12
1.7.1	Spreadsheets	12
1.7.2	Computer Drafting	13
1.7.3	Hydrology Computer Programs	14
A.	HEC-1	14
B.	SMADA	14
C.	SWMM	14
D.	DISTRIB	14
E.	REGRESS	14
F.	PLOAD	15
G.	EZMAT	15
H.	OPSEW	15
I.	TCCALC	15
1.7.4	Programming Languages	15
A.	BASIC	15
B.	FORTRAN	15
C.	C and C++	16
D.	Others	16
1.7.5	Other Programs	16
A.	ICPR	16
B.	TR-55	16
C.	Watershed Modeling System (WMS)	16
1.8	Summary	17
1.9	Problems	17
1.9.1	Hand Calculations	17
1.9.2	Computer Assisted	19
1.9.3	Case Studies	19
1.10	References	20

CHAPTER 2 COMPUTATIONAL METHODS**21****2.1 Probability Concepts 21**

2.1.1 Terminology 21

2.1.2 Definition of Probability 23

2.1.3 Probability and Statistics Concepts 23

A. Independence 23

B. Conditional Probability 23

C. Empirical Probabilities 23

D. Probability Properties 24

E. Graphical Presentations of Probability 25

F. Central Tendency and Distribution Moments 25

G. Variability 26

2.2 Probability Distributions 30

2.2.1 Binomial Distribution 30

2.2.2 Poisson Distribution 31

2.2.3 Normal Distribution 33

2.2.4 Log Normal Distribution 34

2.2.5 Exponential Distribution 34

2.2.6 Gumbel Distribution 35

2.2.7 Log Pearson Type III 36

2.2.8 Recurrence Interval and Risk 37

2.2.9 Evaluation of Risk 39

2.2.10 Limited Samples and Uncertainty 40

2.3 Empirical Frequency Distribution Analysis 41

2.3.1 Histogram Development 42

2.3.2 Plotting Position 42

2.3.3 Annual and Partial Duration Series 44

2.3.4 Daily and True Internal Comparisons 45

2.4 Regression and Correlation Analysis 46

2.4.1 Bivariate Case 49

2.4.2 Correlation 53

2.5 Matrix Methods 54

2.5.1 Matrix Multiplication 54

2.5.2 Solutions to Simultaneous Equations 55

2.6 Summary 57**2.7 Problems 58**

2.7.1 Hand Calculations 58

2.7.2 Computer Assisted 63

2.7.3 Case Studies 64

2.8 References 67**CHAPTER 3 PRECIPITATION****68****3.1 Meteorology 68**

3.1.1 The Atmosphere 68

3.1.2 Water Vapor 69

3.1.3	Solar Energy	70
3.1.4	Wind	70
3.1.5	Temperature	71
3.1.6	Variability of Meteorological Data	72
3.2	Weather Systems	76
3.2.1	Convective Storms	76
3.2.2	Orographic Storms	77
3.2.3	Cyclonic Storms	78
3.2.4	Tropical Cyclones	78
3.3	Precipitation Concepts	79
3.3.1	The Formation of Precipitation	79
3.3.2	Classification of Precipitation	80
3.3.3	Water Quality of Precipitation	80
3.4	Measurement of Precipitation	82
3.4.1	Rainfall Gages	82
3.4.2	Networks of Gages	84
3.4.3	Radar Measurement of Rainfall	86
3.4.4	Missing Data	86
3.5	Interpretation and Quantification of Precipitation Data	87
3.5.1	Rainfall Intensity	87
3.5.2	Cumulative Rainfall Diagram	88
3.5.3	Duration of Precipitation	89
3.5.4	Dimensionless Cumulative Rainfall Diagrams	90
3.6	Average Watershed Precipitation	91
3.6.1	Isohyetal Methods	93
3.6.2	Thiessen Methods	94
3.6.3	Arithmetic Average Method	94
3.6.4	Areal Reduction Factors	96
3.7	Extrapolation of Point Measurements of Watersheds	96
3.7.1	Depth and Watershed Volumes	96
3.7.2	Intensity and Watershed Discharge	97
3.8	Intensity-Duration-Frequency Curves	97
3.8.1	Data Base	98
3.8.2	Best Fit Curves	102
3.9	Snow	104
3.9.1	Physical Nature and Thermal Properties	105
3.9.2	Energy Budget	107
3.10	Summary	109
3.11	Problems	109
3.11.1	Hand Calculations	109
3.11.2	Computer Assisted	114
3.11.3	Case Study	116
3.12	References	117

CHAPTER 4 EVAPOTRANSPIRATION

4.1	Evaporation from Water	118
4.1.1	Evaporation Pans	118

4.1.2	Water Budget	121
4.1.3	Correlations to Climatic Data	121
4.2	Transpiration and Evapotranspiration	124
4.3	Evaporation from Snow	129
4.4	Summary	130
4.5	Problems	130
4.5.1	Hand Calculations	130
4.6	References	132

CHAPTER 5 WATERSHED CHARACTERISTICS AND INFILTRATION 135

5.1	General Characteristics of Watersheds	135
5.1.1	Area and Impervious Area	135
5.1.2	Drainage System and Land Cover	136
5.1.3	Area Storm Coverage	138
5.1.4	Stream Order	138
5.2	Time of Concentration	140
5.2.1	Izzard's Formula	141
5.2.2	Kerby's Equation	141
5.2.3	Kirpich's Equation	142
5.2.4	Kinematic Wave	142
5.2.5	Natural Resources Conservation Service (formerly the Soil Conservation Service)	144
5.2.6	Bransby Williams Equation	145
5.2.7	Federal Aviation Agency Equation	147
5.2.8	Manning's Equation	147
5.3	Infiltration	148
5.3.1	Soil and Hydrologic Classification	149
5.3.2	Green-Ampt Method	150
5.3.3	Modifications to the Green-Ampt Equation	152
5.3.4	NRCS Curve Number Method	153
5.3.5	Horton Equations	161
5.3.6	Water Budget	164
5.4	Development of Transient Rainfall Excess	165
5.4.1	Rainfall, Rainfall Excess, and Runoff	165
5.4.2	Separate vs. Combined Routing	166
5.5	Water Quality	169
5.5.1	Concentrations	169
5.5.2	Event Mean Concentration	170
5.5.3	Loading Rates	170
5.6	Summary	172
5.7	Problems	173
5.7.1	Hand Calculations	173
5.7.2	Computer Assisted	177
5.7.3	Case Studies	178
5.8	References	181

CHAPTER 6 HYDROGRAPHS 183

- 6.1 Hydrograph Properties/Shapes 183**
 - 6.1.1 Hydrograph Records 185
 - 6.1.2 Stream Types by Streamflow Hydrograph Analysis 185
- 6.2 Mathematical Description of Hydrograph Shape 187**
 - 6.2.1 Mathematical Description of the Rising Limb 187
 - 6.2.2 Hydrograph Groundwater Flow Separation (Recession Limb) 189
- 6.3 Unit Hydrograph from Streamflow Data 193**
 - 6.3.1 A Convolution Computation Procedure Using Discrete Time Data 195
 - 6.3.2 Matrix Procedure 201
 - 6.3.3 Computation Procedure for Deriving a Unit Hydrograph 202
- 6.4 Synthetic Hydrographs 205**
 - 6.4.1 Rational Method 205
 - 6.4.2 The SCS Hydrograph 211
 - 6.4.3 SCS Unit Hydrograph 214
 - 6.4.4 Clark Unit Hydrograph 221
 - 6.4.5 Santa Barbara Urban Hydrograph 224
 - 6.4.6 Continuous Convolution Method 229
 - A. Convolution with Constant Rainfall Excess 230
 - B. Convolution and Variable Rainfall Excess 233
 - 6.4.7 Contributing Area Method 238
- 6.5 Summary 247**
- 6.6 Problems 249**
 - 6.6.1 Hand Calculations 249
 - 6.6.2 Computer Assisted 257
 - 6.6.3 Case Studies 259
- 6.7 References 263**

CHAPTER 7 STREAMFLOW MEASUREMENTS AND FLOW CONTROL DEVICES 265

- 7.1 Method of Measurements 265**
 - 7.1.1 Stage 265
 - 7.1.2 Current Meter 268
 - 7.1.3 Dilution 271
 - 7.1.4 Float 274
 - 7.1.5 Indirect Method Using Manning's Equation 274
 - 7.1.6 Direct Measure 275
 - 7.1.7 Weirs and Flumes 277
 - 7.1.8 Other Gaging and Outlet Controls 283
- 7.2 Network of Gages 284**
- 7.3 Water Quality Measurement 287**
 - 7.3.1 Sampling Techniques 288
 - 7.3.2 Computation of Pollutant Load 289
 - 7.3.3 Sediment Load Computations 290

7.4	Summary	293
7.5	Problems	295
	7.5.1 Hand Calculations	295
	7.5.2 Computer-Assisted Problems	300
7.6	References	301

CHAPTER 8 FLOW ROUTING
303

8.1	Theoretical Basis	303
8.2	Kinematic Wave	305
	8.2.1 Overland Flow	308
	8.2.2 Kinematic Parameters for Channel Shapes	309
8.3	Routing by the Inventory Equation	313
8.4	Routing by the Muskingum Method	322
	8.4.1 Muskingum Routing Constants K and c	324
	8.4.2 Additional Methods for Estimating K and c	325
8.5	Summary	330
8.6	Problems	330
	8.6.1 Hand Calculations	330
	8.6.2 Computer Problems	333
8.7	References	334

CHAPTER 9 GROUNDWATER HYDROLOGY
335

9.1	The Occurrence of Groundwater	335
	9.1.1 Porosity	336
	9.1.2 Permeability	337
	9.1.3 Factors Affecting Permeability	340
	9.1.4 Common Permeability Values	341
9.2	Aquifers and Springs	343
	9.2.1 Aquifers-An Example	344
9.3	Movement of Groundwaters	345
9.4	Flow in a Confined Aquifer	347
9.5	Flow in an Unconfined Aquifer	349
9.6	Uniform Infiltration and Drainage	350
9.7	Well Systems	352
	9.7.1 Yield of a Confined Aquifer	353
	9.7.2 Yield of an Unconfined Aquifer at Equilibrium	355
	9.7.3 Unsteady Flow	356
	9.7.4 Salt Water Intrusion	358
9.8	Groundwater Quality Considerations	359
9.9	Conjunctive Use	361
9.10	Summary	361
9.11	Problems	362
9.12	References	364

CHAPTER 10 STORMWATER MANAGEMENT 365

- 10.1 Surface Water Availability from Streamflow 365**
 - 10.1.1 Volume and Yield of a Surface Water Reservoir 366
 - 10.1.2 Mass Curve (Ripple's Method) 366
 - 10.1.3 Modification of Storage Volumes 369
 - 10.1.4 Stochastic Models 369
 - 10.1.5 Random Generation (Independent Events) 371
 - 10.1.6 Serial Correlation 374
- 10.2 Design Storms 375**
 - 10.2.1 Design Storm Frequency 376
 - 10.2.2 Design Duration and Distribution 376
- 10.3 Hydrograph Attenuation in a Stormwater Detention Basin 386**
 - 10.3.1 Storage and Outflow Hydrographs 389
 - 10.3.2 Case Studies 391
- 10.4 Culverts 399**
- 10.5 Off-Line Retention (Infiltration Ponds) 405**
- 10.6 Swale Design 407**
- 10.7 French Drains 410**
- 10.8 Stormwater Reuse 412**
- 10.9 Design of Storm Sewer Systems 414**
 - 10.9.1 Determination of Storm Sewer Flow Rates 414
 - 10.9.2 Hydraulic Grade Calculations 415
 - 10.9.3 Constraints for Storm Sewer Design 417
- 10.10 Water Quality 420**
 - 10.10.1 Pollutographs 420
 - 10.10.2 Loadographs 421
- 10.11 Summary 422**
- 10.12 Problems 423**
 - 10.12.1 Hand Calculations 423
 - 10.12.2 Computer Assisted 431
 - 10.12.3 Case Studies 432
- 10.13 References 433**

APPENDIX

- A Notation 435**
- B Metric Units with English Equivalents 441**
- C Nondimensional Rainfall and Intensity-Duration-Frequency Curves 452**
- D Statistical Tables 462**
- E Derivation of Equations for Swale Design 483**
- F Gutters, Inlets, and Roadways 490**
- G Derivation of the Functional Forms of the Continuous Time Convolution Formulas 497**

H	Selected Hydrologic Soil Classifications	500
I	Stormwater Programs	520
J	Supplemental Hydrology Assignments	537
