

Contents

Part I	Theory	1
1	Introduction	3
1.1	What are networks?	3
1.2	When did the story begin?	4
1.3	A formal definition	6
1.4	Why do we study their structure?	9
1.5	How can we speak their ‘language’?	14
2	Adjacency relations in networks	25
2.1	Node adjacency relationship	25
2.2	Degree distributions	27
2.3	Degree–degree correlations	31
2.4	Link adjacency and beyond	36
2.5	Discrete Laplacian operator	37
2.6	Spectral properties of networks	39
3	Metric and topological structure of networks	47
3.1	Shortest path distance	47
3.2	Resistance distance	50
3.3	Generalized network distances	55
3.4	Topological structure of networks	57
4	Fragments (subgraphs) in complex networks	73
4.1	Network ‘graphlets’	74
4.2	Network motifs	76
4.3	Closed walks and subgraphs	78
4.4	Counting small undirected subgraphs analytically	79
4.5	Fragment ratios	82
5	Accounting for all parts (subgraphs)	89
5.1	The Estrada index	90
5.2	Parameterised Estrada index	95
5.3	Network entropy and free energy	97
5.4	Network returnability	103
5.5	A brief on matrix functions	106

6	Communicability functions in networks	109
6.1	Network communicability	109
6.2	Communicability in directed and weighted networks	113
6.3	Generalised communicability functions	114
6.4	Communicability based on network vibrations	115
7	Centrality measures	121
7.1	Degree centrality	121
7.2	Centrality beyond nearest-neighbours	125
7.3	Closeness centrality	140
7.4	Betweenness centrality	142
7.5	Information centrality	146
8	Global network invariants	149
8.1	Adjacency-based invariants	149
8.2	Distance-based invariants	159
8.3	Clumpiness of central nodes	161
8.4	Self-similarity of complex networks	166
9	Expansion and network classes	171
9.1	Network expansion	171
9.2	Universal topological classes of network	173
9.3	Topological classification of real-world networks	181
10	Community structure of networks	187
10.1	Network partition methods	190
10.2	Methods based on link centrality	198
10.3	Methods based on modularity	203
10.4	Clustering based on similarity	206
10.5	Communities based on communicability	209
11	Network bipartivity	215
11.1	Bipartivity measures	216
11.2	How do we find bipartitions in networks?	220
11.3	Bipartitions in undirected networks	224
11.4	Bipartitions in directed networks	227
12	Random models of networks	233
12.1	‘Classical’ random networks	233
12.2	Small-world random networks	238
12.3	‘Scale-free’ networks	243
12.4	Random geometric networks	250
12.5	Other random models	252

Part II Applications	257
13 Genetic networks	259
13.1 A primer on gene networks	259
13.2 Topological properties of gene coexpression networks	263
13.3 Topological properties of gene regulatory networks	267
13.4 Other gene networks	274
14 Protein residue networks	277
14.1 A primer on protein structure	277
14.2 Protein residue networks	280
14.3 Small-worldness of residue networks	282
14.4 Degree distributions of residue networks	285
14.5 Centrality in residue networks	287
14.6 Global topological properties	295
15 Protein-protein interaction networks	301
15.1 A primer on protein-protein interactions	301
15.2 Global structure of PPI networks	304
15.3 Subgraph-based techniques in PPI networks	311
15.4 Bipartite structures in PPI networks	316
15.5 Local structure of PPI networks	319
16 The structure of reaction networks	325
16.1 Organic chemical reaction networks	326
16.2 Reaction networks in the atmospheres of astronomical bodies	330
16.3 Metabolic networks	333
17 Anatomical networks	345
17.1 Intercellular networks	345
17.2 Vascular networks	353
17.3 Brain networks	355
18 Ecological networks	373
18.1 Global topological properties	374
18.2 Searching for keystone species	383
18.3 Landscape networks	389
18.4 Other network-based ecological studies	395
19 Social and economic networks	399
19.1 Brief on socioeconomic network data	400
19.2 Global topology of social networks	401
19.3 Social network communities	408
19.4 Centrality in social networks	412
19.5 Economic networks	415

Appendix	423
A.1 Brain networks	423
A.2 Ecological networks	423
A.3 Informational networks	424
A.4 PPI networks	424
A.5 Protein residue networks	425
A.6 Social and economic networks	425
A.7 Technological networks	426
A.8 Transcription networks	426
A.9 Software	426
