

Content

1 INTRODUCTION 5

2 THE ECOLOGICAL BASIS OF SILVICULTURE 6

2.1 The role of humans in the development of forest ecosystems..... 6

2.2 Terms referring to natural forests..... 7

3 STRUCTURE OF FOREST ECOSYSTEM..... 10

4 STATE OF THE FORESTS 13

4.1 State of the forests in the Czech Republic..... 13

4.2 World forest resources assessment..... 17

5 INTRODUCTION TO THE FOREST TYPOLOGY IN THE CZECH REPUBLIC 20

6 NATURAL REGENERATION OF FOREST STANDS 22

6.1 Biological requirements for natural regeneration..... 22

6.2 Seed supply 22

6.2.1 Mast year prediction 22

6.2.2 Seed dispersal 24

6.2.3 Seed viability 25

6.2.4 Post-dispersal seed and seeding losses..... 26

6.2.5 Seed germination 26

6.3 Seedbed conditions..... 26

6.3.1 Mineral soil 27

6.3.2 Dead wood..... 28

6.3.3 Litter and humus..... 31

6.3.4 Soil acidity 32

6.4 Other environmental factors affecting germination, survival and establishment 32

6.4.1 Aspect 32

6.4.2 Shade 33

6.4.3 Frost..... 33

6.4.4 Vegetation..... 34

6.5 Rates of recruitment, survival and growth 34

6.5.1 Seedbed receptivity and rates of ingress..... 34

6.5.2 Patterns of seedling survival 35

6.5.3 Growth rates of natural regeneration..... 35

6.5.4 Effects of environmental factors on growth 35

6.6 Gap-phase regeneration in natural forests 36

7 BASIC METHODS OF NATURAL FOREST STANDS REGENERATION..... 40

7.1 General approach..... 40

7.2 Norway spruce stands..... 42

7.3 Beech stands 42

7.4 Methods of forest stand regeneration according to selected Forest management units 45

- 8 INTRODUCTION TO ARTIFICIAL ESTABLISHMENT OF FOREST STANDS.....47
 - 8.1 Reproductive material47
 - 8.1.1 Types of reproductive material 47
 - 8.1.2 History of the seed origin evaluation and classification 47
 - 8.1.3 Current transfer rules in the Czech Republic 48
 - 8.2 Collection and management of seeds50
 - 8.2.1 Seed collection and processing 50
 - 8.2.2 Seed storage 50
 - 8.2.3 Seed testing 50
 - 8.3 Forest nursery51
 - 8.3.1 Production of bare root seedlings..... 52
 - 8.3.2 Production of containerized planting stocks 56
 - 8.4 Reforestation58
- 9 MANAGEMENT OF YOUNG FOREST STANDS.....61
 - 9.1 Silviculture techniques in young forest stands.....61
 - 9.2 Cleaning of young forest stands62
- 10 THINNINGS65
 - 10.1 Thinning practice and objectives65
 - 10.2 Principles of thinning for main forest tree species.....66
 - 10.2.1 Norway spruce stands 67
 - 10.2.2 Scots pine stands 67
 - 10.2.3 Beech stands..... 69
 - 10.2.4 Oak stands 69
 - 10.2.5 Mixed stands..... 70
 - 10.3 Thinning of forest stands endangered by abiotic factors.....70
 - 10.3.1 Norway spruce stands heavily endangered by snow and wind 71
 - 10.3.2 Norway spruce stands moderately endangered by snow and wind..... 72
 - 10.3.3 Norway spruce stands with neglected thinning 73
- 11 SILVICULTURAL SYSTEMS75
 - 11.1 Monocyclic management systems.....75
 - 11.1.1 Clear-cut form of stand regeneration 75
 - 11.1.2 Shelterwood-cut form of regeneration 76
 - 11.1.3 Strip-felling form of regeneration 79
 - 11.2 Selection silvicultural system80
 - 11.3 Silvicultural systems in present forestry practice.....81
- 12 CONCLUSION.....83
- 13 LITERATURE84
