

CONTENTS

Foreword	11
Chapter 1 Subatomic structure of matter (<i>O. Navrátil</i>)	13
1.1 Matter, field and interactions	13
1.2 Elementary and fundamental particles	15
1.3 Equivalence of mass and energy	19
1.4 Atomic nucleus	20
1.4.1 Nuclear forces, composition and dimension of atomic nucleus	20
1.4.2 Spin, magnetic and quadrupole moments	22
1.4.3 Nuclear mass and binding energy	24
1.4.4 Nuclear stability	26
1.4.5 Nuclear models	29
Literature	33
Chapter 2 Nuclear transmutations (<i>V. Mikulaj</i>)	34
2.1 Radioactive transmutations of nuclides	34
2.1.1 Basic characteristics of radioactive transmutations	34
2.1.2 Kinetics of radioactive transmutations	37
2.1.2.1 Simple radioactive transmutation	37
2.1.2.2 Successive radioactive transmutations	40
2.1.2.3 Branched radioactive transmutations	43
2.1.3 Gamma transmutations and isomeric transitions	44
2.1.4 Beta transmutations	46
2.1.5 Alpha transmutations	49
2.1.6 Spontaneous fission	51
2.1.7 Spontaneous emission of nucleons	52
2.1.8 Influence of the physical and chemical state of the radionuclide on the transmutation rate	53
2.2 Nuclear reactions	53
2.2.1 Basic characteristics of nuclear reactions	54

2.2.2 Effective cross-sections and kinetics of nuclear reactions	57
2.2.3 Mechanisms of nuclear reactions	61
2.2.4 Reactions of neutrons	64
2.2.5 Fission reaction	67
2.2.6 Nuclear reactions induced by charged particles and photons	70
2.3 Chemical reactions caused by nuclear transmutations	73
2.3.1 Recoil energy and properties of hot atoms	73
2.3.2 Szilard-Chalmers effect	76
2.3.3 Chemical consequences of radioactive transmutations	77
2.4 Behaviour of radionuclides at trace concentrations	78
Literature	81
 Chapter 3 Properties of nuclides and nucleogenesis (R. Kopunec)	83
3.1 General characteristics of nuclides	83
3.1.1 Systematic classification of nuclides	83
3.1.2 Natural nuclides	85
3.1.3 Natural radioactivity	87
3.1.4 Nuclear chronology	92
3.2 Isotopy of elements	93
3.2.1 The concept of isotopes	93
3.2.2 Isotope effects	95
3.2.3 Methods of isotope concentration and separation	98
3.3 Radioactive elements	105
3.3.1 General characteristics	105
3.3.2 Technetium and promethium	107
3.3.3 Elements with atomic numbers 84–91	109
3.3.4 Uranium, neptunium, and plutonium	113
3.3.5 Heavier actinides (elements with atomic numbers 95–103)	115
3.3.6 Translawrencium elements	119
3.4 Nucleogenesis of chemical elements in the universe	123
3.5 Generalized state diagram of matter	125
Literature	129
 Chapter 4 Effects of nuclear radiation (F. Macášek)	131
4.1 Propagation and absorption of radiation	131
4.1.1 Attenuation and range of nuclear radiation	132
4.1.2 Mechanism of energy loss	136
4.1.3 Excitation and ionization of molecules. Formation of radicals	140
4.1.4 Radiation-physical phenomena	142
4.1.5 Exposure and absorbed radiation dose	143
4.1.6 Radiation sources	144
4.2 Radiation-chemical reactions	148

4.2.1 Mean yield of radiation-chemical reactions	148
4.2.2 Reactions of the primary radiolysis products	149
4.2.3 Recombination reactions of radicals	152
4.2.4 Steady-state concentrations of radicals formed by irradiation	154
4.3 Radiolysis of water and aqueous solutions	158
4.3.1 Radical and molecular products of radiolysis	158
4.3.2 Reactions of the H radical and solvated electron	159
4.3.3 Reactions of radicals OH, HO ₂ , and O ₂ ⁻	161
4.3.4 Aqueous solutions as chemical dosimeters	162
4.4 Radiolysis of organic substances	163
4.4.1 Radiolysis of pure liquids	163
4.4.2 Radiolysis of solutions	166
4.4.3 Radiolysis in gas-liquid systems	168
4.4.4 Radiolysis of polymers	169
4.5 Biological effects of ionizing radiation	171
4.5.1 Molecular, subcellular, and cellular levels	171
4.5.2 Somatic and genetic effects	173
4.5.3 Radiation hygiene	174
Literature	176

Chapter 5 Analysis of nuclides (J. Hála and O. Navrátil)	177
5.1 Analysis of radioactive nuclides	177
5.2 Detection and measurement of ionizing radiation	179
5.2.1 Ion collection methods	180
5.2.1.1 Gas-filled detectors	180
5.2.1.2 Solid state detectors	186
5.2.2 Scintillation methods	189
5.2.2.1 Scintillation detector	189
5.2.2.2 Inorganic scintillators	191
5.2.2.3 Liquid scintillation counting	193
5.2.2.4 Čerenkov counting	196
5.3 Spectrometry of ionizing radiation	197
5.3.1 Pulse height analysis	197
5.3.2 Alpha spectrometry	200
5.3.3 Gamma and X-ray spectrometry	201
5.3.4 Beta spectrometry	205
5.4 Errors in radioactivity measurement	208
5.5 Radiographic methods	212
5.5.1 Photographic methods	212
5.5.2 Solid state track detectors	214
5.6 Mass spectroscopy	215
5.6.1 Abundance mass spectroscopy	215

5.6.2 Accelerator mass spectroscopy	218
5.7 Other methods of stable nuclide analysis.	219
5.7.1 Atomic and molecular optical spectroscopy	219
5.7.2 Gas chromatography	223
5.7.3 Nuclear magnetic resonance	224
Literature	225

Chapter 6 Production of radionuclides and labelled compounds

(*L. Lešetický*) 226

6.1 Sources of nuclear projectiles	226
6.1.1 Sources of charged particles	226
6.1.2 Neutron sources	228
6.1.3 Sources of high-energy photons.	229
6.2 Activation techniques.	230
6.2.1 Neutron reactions	230
6.2.2 Reactions of charged particles	231
6.3 Production of radionuclides	232
6.3.1 Thermal neutron activation	232
6.3.2 Charged particle activation.	234
6.3.3 Radionuclide generators	235
6.4 Nomenclature of labelled compounds	236
6.5 Preparation of labelled compounds	237
6.5.1 Isotope exchange	237
6.5.2 Radiochemical methods	240
6.5.2.1 Recoil labelling	240
6.5.2.2 Wilzbach method	242
6.5.3 Synthetic methods	244
6.5.3.1 Hydrogen isotopes	244
6.5.3.2 Carbon isotopes	246
6.5.3.3 Isotopes of halogens.	248
6.6 Stability of labelled compounds	250
Literature	253

Chapter 7 The method of isotopic tracers (*J. Hála*) 254

7.1 Equivalence of chemical bonds.	255
7.2 Existence of unstable compounds.	256
7.3 The course of chemical reactions	256
7.3.1 Reaction mechanisms	256
7.3.2 Molecular rearrangements	259
7.3.3 Biosynthesis	260
7.3.4 Metabolic studies	262
7.4 Tracers in kinetic studies	264

7.5 Sequencing of nucleic acids	269
7.6 Self-diffusion	271
7.7 Surface area determination	272
7.8 Solubility of sparingly soluble substances	273
7.9 Distribution of substances between two phases	274
7.10 Emanometry	276
7.11 Tracer method in chemical analysis	277
7.11.1 Direct counting of natural radionuclides	278
7.11.2 Radiometric titrations	278
7.11.3 Isotope dilution	279
7.11.4 Radioactive reagents	282
7.11.5 Methods based on exchange (displacement) reactions	282
7.11.6 Radiorelease methods	283
7.11.7 Radioimmunoassays (RIA) and related methods	284
7.12 Tracers in chemical industry and related areas	286
Literature	290
 Chapter 8 Interaction methods of analysis (J. Hála)	291
8.1 Activation analysis	291
8.1.1 Qualitative and quantitative analysis	292
8.1.2 Procedure	294
8.1.3 Neutron activation analysis (NAA)	296
8.1.4 Charged particle analysis (CPAA)	299
8.1.5 Photoactivation	300
8.1.6 Prompt activation analysis	300
8.1.7 Stable isotope analysis via activation	302
8.2 Radionuclide X-ray fluorescence analysis (RXFA) and particle induced X-ray emission (PIXE) methods	303
8.3 Analytical methods based on absorption and scattering of nuclear radiation	307
8.3.1 Absorption of beta radiation	307
8.3.2 Absorption of gamma and X-rays	308
8.3.3 Absorption of neutrons	309
8.3.4 Alpha particle scattering	310
8.3.5 Beta particle back-scattering	311
8.3.6 Gamma radiation scattering	312
8.3.7 Neutron scattering	313
8.4 Application of absorption and scattering methods in chemical industry	313
8.5 Resonance absorption of gamma-radiation – Mössbauer effect	315
Literature	320
 Chapter 9 Nuclear-chemical technology (V. Mikulaj)	321

9.1 Nuclear reactors	321
9.1.1 Chain fission reaction	321
9.1.2 Controlled chain reaction. Basic characteristics and types of nuclear reactors	325
9.1.3 Thermal power reactors. Nuclear power stations	328
9.1.3.1 Light-water reactors	331
9.1.3.2 Heavy-water reactors	333
9.1.3.3 Graphite reactors. High-temperature reactors	333
9.1.4 Fast breeder reactors	335
9.2 Processing of irradiated nuclear fuel	336
9.2.1 Formation of secondary fissionable materials	336
9.2.2 Properties and processing of burnt-up nuclear fuel	338
9.2.3 Manufacture of plutonium and uranium-233	341
9.2.4 Production of transuranium elements and other nuclides	343
9.3 Production of nuclear fuel and reactor materials	346
9.3.1 Production of uranium	346
9.3.2 Production of thorium	348
9.3.3 Other reactor materials	349
9.4 Radioactive waste management	350
9.5 Thermonuclear reactors	351
Literature	353
 Chapter 10 Radionuclides in the environment (L. Lešetický)	355
10.1 Sources of radionuclides	355
10.1.1 Natural sources	355
10.1.2 Artificial sources	356
10.1.3 Nuclear accidents	361
10.2 Transfer of radionuclides into animal organisms	364
10.2.1 Transfer pathways	364
10.2.2 Ecological significance of some radionuclides	366
Literature	369
 Appendix 1	371
Appendix 2	372
Appendix 3	376
Index	379
