

CONTENTS

Introduction	1
1. Basic definitions	3
2. E theory	6
3. K -injective spectra	18
4. Generalised Moore spectra	21
5. Bousfield classes	32
6. The $E(n)$ -local category	33
7. General properties of the $K(n)$ -local category	41
8. Smallness and duality	45
9. Homology and cohomology functors	50
10. Brown-Comenetz duality	52
11. The natural topology	55
12. Dualisable spectra	57
13. K -nilpotent spectra	64
14. Grading over the Picard group	67
15. Examples	75
16. Questions and conjectures	81
A. Completion	83
B. Small objects in other categories	91
References	96
Index	99
