

Contents

List of Contributors	xi	Enzyme inhibition	57
Preface to First Edition	xiii	Regulation of enzyme activity	59
Preface to Second Edition	xv		
Dedication	xvi		
1. Introduction	1	6. Hemostasis and Thrombosis	63
<i>J W Baynes and M H Dominiczak</i>		<i>G Lowe</i>	
The value of biochemistry	1	Introduction	63
How this book tells the story of biochemistry	1	Hemostasis	63
		The vessel wall	65
		Platelets	66
		Coagulation	69
		Fibrinolysis	74
2. Amino Acids and Proteins	7		
<i>N Taniguchi</i>		7. Membranes and Transport	77
Introduction	7	<i>M Maeda</i>	
Amino acids	7	Introduction	77
Buffers	12	Membrane lipids	77
Peptides and proteins	12	Composition of biomembranes	78
Purification and characterization of proteins	16	Types of transport processes	80
Analysis of protein structure	21		
Protein folding and folding disease	23	8. Bioenergetics and Oxidative	
		Metabolism	93
3. Blood: Cells and Plasma Proteins	25	<i>L W Stillway</i>	
<i>W D Fraser</i>		Introduction	93
Introduction	25	Oxidation as a source of energy	93
Plasma and serum	25	Free energy	94
Formed elements of blood	25	Conservation of energy by coupling with ATP	95
Plasma proteins	26	Mitochondrial synthesis of ATP from reduced	
The acute phase response and C-reactive protein		coenzymes	96
(CRP)	32	The mitochondrial electron transport system	97
		The ATP-synthetic proton gradient	102
4. Oxygen Transport	35	P:O ratios and respiratory control	105
<i>G M Helmkamp</i>		Inhibitors of oxidative metabolism	106
Introduction	35	Regulation of oxidative phosphorylation	110
Structure of the heme prosthetic group	35		
Characteristics of mammalian globin proteins	36	9. Function of the Gastrointestinal	
Recently identified vertebrate globins	43	Tract	113
Insights from myoglobin knockout mice	44	<i>I Broom</i>	
Interactions of hemoglobin with nitric oxide	44	Introduction	113
Normal hemoglobin variants	45	The mechanical and anatomical basis of digestion	113
Sickle cell disease	45	General principles of digestion	115
Other hemoglobinopathies	47	Digestion and absorption of carbohydrates	116
		Digestion and absorption of lipids	120
5. Catalytic Proteins—Enzymes	51	The pancreas	120
<i>J Fujii</i>		Digestion and absorption of proteins	123
Introduction	51		
Enzymatic reactions	51		
Enzyme kinetics	55		

10. Micronutrients: Vitamins and Minerals	127	15. Biosynthesis and Storage of Fatty Acids in Liver and Adipose Tissue	199
<i>M H Dominiczak and I Broom</i>		<i>I Broom</i>	
Introduction	127	Introduction	199
Fat-soluble vitamins	128	Fatty acid synthesis	199
Water-soluble vitamins	133	Fatty acid elongation	202
Trace elements	139	Desaturation of fatty acids	203
11. Anaerobic Metabolism of Glucose in the Red Blood Cell	143	Essential fatty acids	203
<i>J W Baynes</i>		Storage and transport of fatty acids: the synthesis of triacylglycerols	203
Introduction	143	Regulation of total body fat stores	204
The erythrocyte	143	16. Biosynthesis of Cholesterol and Steroids	209
Glycolysis	144	<i>M H Dominiczak and G Beastall</i>	
Synthesis of 2,3-bisphosphoglycerate	150	Introduction	209
The pentose phosphate pathway	150	Cholesterol structure	209
Concentrations of redox coenzymes in the cell	151	Free and esterified cholesterol	209
12. Carbohydrate Storage and Synthesis in Liver and Muscle	157	Cholesterol biosynthesis	216
<i>J W Baynes</i>		Bile acids	217
Introduction	157	Cholesterol excretion	218
Structure of glycogen	157	Steroid hormones	218
Pathway of glycogenesis from blood glucose in liver	158	Vitamin D ₃	220
Pathway of glycogenolysis in liver	159	17. Lipids and Lipoproteins	225
Hormonal regulation of hepatic glycogenolysis	160	<i>M H Dominiczak</i>	
Mechanism of action of glucagon	160	Introduction	225
Mobilization of hepatic glycogen by epinephrine	163	Structure and function of lipoproteins	226
Glycogenolysis in muscle	164	Lipoprotein receptors	230
Regulation of glycogenesis	165	Measurement of lipoproteins	230
Gluconeogenesis	167	Metabolism of lipoproteins	231
13. The Tricarboxylic Acid Cycle	175	Dyslipidemias	234
<i>L W Stillway</i>		Atherogenesis	236
Introduction	175	Cardiovascular risk and its assessment	240
Energy production in the TCA cycle	175	18. Biosynthesis and Degradation of Amino Acids	245
Biosynthesis linked to TCA cycle	175	<i>A B Rawitch</i>	
Pyruvate carboxylase	177	Introduction	245
The pyruvate dehydrogenase complex (PDC)	178	Metabolism of the carbon skeletons of amino acids	253
Enzymes and reactions of the TCA cycle	180	Amino acid biosynthesis	256
Energy yield from the TCA cycle	184	Inherited diseases of amino acid metabolism	256
Regulation of the TCA cycle	184	Amino acids as precursors of signaling molecules	259
Anaplerotic ('filling up') reactions	186	19. Muscle: Energy Metabolism and Contraction	261
14. Oxidative Metabolism of Lipids in Liver and Muscle	189	<i>J A Carson and J W Baynes</i>	
<i>J W Baynes</i>		Introduction	261
Introduction	189	Structure of muscle	261
Activation of fatty acids and their transport to the mitochondrion	189	Muscle proteins	263
Oxidation of fatty acids	190	Muscle energy metabolism	268
Ketogenesis in liver	194	Metabolism and muscle contraction	268

20. Glucose Homeostasis, Fuel Metabolism, and Insulin	273	24. Calcium and Bone Metabolism	345
<i>M H Dominiczak</i>		<i>W D Fraser</i>	
Organ-fuel interactions	273	Calcium metabolism	347
Glucose homeostasis	274	Disorders of calcium metabolism and bone	352
Insulin	275	Metabolic bone disease	356
Hypoglycemia	278		
Metabolism after a meal and in the fasting state	279	25. Complex Carbohydrates: Glycoproteins	359
Metabolism during stress, and the metabolic response to injury	282	<i>A D Elbein</i>	
Diabetes mellitus: the principal disorder of fuel metabolism	286	Glycoproteins: structures and linkages	359
Treatment of diabetes	293	Interconversions and activation of dietary sugars	362
Assessment of fuel metabolism	294	Other pathways of sugar nucleotide metabolism	365
		Biosynthesis of oligosaccharides	366
21. Nutrition	299	Functions of the oligosaccharide chains of glycoproteins	369
<i>M H Dominiczak</i>			
Introduction	299	26. Complex Lipids	375
Key definitions and recommendations used in nutrition science	299	<i>A D Elbein</i>	
Nutrition and genetics	299	Introduction	375
The main classes of nutrients	301	Glycerophospholipids (phospholipids)	375
The essential (limiting) nutrients	303	Sphingolipids	379
Water and minerals	303		
Energy homeostasis	304	27. The Extracellular Matrix	387
Regulation of food intake	305	<i>G P Kaushal and A D Elbein</i>	
Assessment of nutritional status	305	Introduction	387
Malnutrition	307	Collagens	387
Obesity	308	Noncollagenous proteins in the extracellular matrix	390
Diet in health and disease	309	Proteoglycans	394
Nutrition and chronic disease	311		
		28. Special Liver Function	399
22. Water and Electrolyte Balance: Kidney Function	315	<i>A F Jones</i>	
<i>M H Dominiczak and M Szczepanska-Konkel</i>		Introduction	399
Introduction	315	Structure of the liver	399
Water, sodium, and potassium metabolism	315	Participation of the liver in carbohydrate metabolism	399
Osmolality and volume of ECF and ICF	317	Liver and protein metabolism	401
The water balance	319	Heme synthesis	403
The kidney	319	Bilirubin metabolism	403
The importance of plasma potassium concentration	325	Drug metabolism	405
The renin-angiotensin system	326	Pharmacogenomics	408
Water reabsorption in the distal tubule and collecting duct	328	Genomics of liver disease	408
Water metabolism and sodium metabolism are interrelated	330	Biochemical tests of liver function	409
		Classification of liver disorders	410
23. Lung and Kidney: The Control of Acid-Base Balance	333	29. Biosynthesis and Degradation of Nucleotides	413
<i>M H Dominiczak and M Szczepanska-Konkel</i>		<i>R Thornburg</i>	
The body buffer systems	333	Introduction	413
The lungs and the gas exchange	336	Purine metabolism	413
Kidneys and the handling of bicarbonate	340	Pyrimidine metabolism	417
Clinical disorders of the acid-base balance	341	Formation of deoxynucleotides	421

30. Deoxyribonucleic Acid (DNA)	425	36. The Immune Response	507
<i>R Thornburg</i>		<i>A Farrell</i>	
Introduction	425	Introduction	507
Structure of DNA	425	The nonspecific immune response	507
The cell cycle	430	The specific immune response	509
		Lymphoid tissues and traffic between them	510
		Lymphocytes	511
31. Ribonucleic Acid (RNA)	437	Molecules involved in antigen recognition	511
<i>G A Bannon</i>		The reaction with, the response to, and the	
Molecular anatomy of RNA molecules	437	elimination of, antigens	514
RNA polymerases	439	Major histocompatibility complex (MHC)	516
The process of transcription	440	MHC expression patterns and MHC restricted	
Post-transcriptional processing	442	stimulation	517
		Humoral specific immune response	518
32. Protein Synthesis and Turnover	447	The cellular and molecular elements of the	
<i>G A Bannon</i>		integrated immune response	519
Introduction	447	Immunologic dysfunction	521
The genetic code	447		
The machinery of protein synthesis	449	37. Biochemical Endocrinology	523
The process of protein synthesis	451	<i>F F Bolander Jr</i>	
Protein targeting and post-translational		Introduction	523
modifications	455	Hormones	523
		The hypothalamo-pituitary regulatory system	525
33. Control of Gene Expression	459	The hypothalamo-pituitary-thyroid axis	526
<i>D M Hunt and A Jamieson</i>		The hypothalamo-pituitary-adrenal axis	529
Introduction	459	The hypothalamo-pituitary-gonadal axis	531
Basic mechanisms of gene expression	459	The growth hormone axis	536
Steroid receptors	464	The prolactin axis	539
Alternative approaches to gene regulation in			
humans	465	38. Membrane Receptors and Signal	
Gene expression	467	Transduction	541
		<i>M M Harnett and H S Goodridge</i>	
34. Recombinant DNA Technology	473	Introduction	541
<i>W S Kistler and A Jamieson</i>		Hormone receptors	541
Introduction	473	Receptor coupling to intracellular signal	
Hybridization	473	transduction	542
DNA amplification and cloning	480	Second messengers	546
Specific methods used in the analysis of DNA	485		
DNA sequencing	492	39. Neurochemistry	559
		<i>E J Thompson</i>	
35. Oxygen and Life	497	Introduction	559
<i>J W Baynes</i>		Brain and peripheral nerve	559
Introduction	497	Cells of the nervous system	560
The inertness of oxygen	497	Synaptic transmission	563
Reactive oxygen species (ROS) and oxidative stress		The mechanism of vision	566
(OxS)	499		
Reactive nitrogen species (RNS)	499	40. Neurotransmitters	569
The nature of oxygen radical damage	500	<i>S Heales</i>	
Antioxidant defenses	501	Introduction	569
		Definitions of a neurotransmitter	569
		Classification of neurotransmitters	569
		Neurotransmission	570
		Various classes of neurotransmitters	573

41. Cell Growth, Differentiation, and Cancer 583

M M Harnett and H S Goodridge

Introduction	583
The cell cycle	583
Growth factors	584
Regulation of the cell cycle	589
Apoptosis	590
Cancer	594

42. Aging 599

J W Baynes

Introduction	599
Theories of aging	601
Aging of muscle – damage to mitochondrial DNA	606
Interventions to delay aging – what works and what doesn't	606
Genetic models of aging	607

Appendix: Reference values and clinical decision limits for laboratory tests 609

M H Dominiczak

Selected serum proteins	609
Blood gases	609
Calcium and phosphate	609

Cerebrospinal fluid	610
Coagulation	610
Electrolytes	610
Endocrine tests	610
Full blood count	610
Glucose and glycated hemoglobin	610
Lipids	611
Liver function	611
Key metabolites	611
Diagnosis of myocardial infarction	611
Neurotransmitters	611
Marker of pancreatitis	611
Trace metals and metal-binding proteins	611
Vitamins	612

Self-assessment

Multiple-choice questions (MCQs)	613
Patient-oriented problems (POPs)	635
Short-answer questions (SAQs)	643
MCQ answers	649
POP answers	651
SAQ answers	655
Abbreviations	665
Index	671
