

List of Abstracts

Invited Keynote Presentations:

1. Brunetti, G., and J. Šimůnek, Selected Applications of HYDRUS Models for Engineering Problems. 16
2. Bezerra Coelho, C. R., L. Zhuang, and M. Th. van Genuchten, Hydrus-1D tests of the Hyprop evaporation method for estimating the unsaturated soil hydraulic functions. 14
3. Jacques, D., D. Zhou, J. Makselon, I. Engelhardt, and S. Thiele-Bruh, Colloid and colloid-facilitated transport modeling using HPx. 28
4. Langergraber G., Process-based models for subsurface flow treatment wetlands: Recent developments and challenges. 32
5. Rajj, I., G. Bel, and Naftali Lazarovitch, Unveiling multi-dimensional water flow and solute transport using HYDRUS codes. 40
6. Šimůnek, J., M. Th. van Genuchten, D. Jacques, and M. Šejna, Recent developments and applications of the HYDRUS software packages. 41

Oral Presentations:

1. Arye, G., and J. Šimůnek, Surface-active root exudates induced flow phenomena in the rhizosphere: A numerical study. 11
2. Batalha, M. S., E. M. Pontedeiro, and M. Th. van Genuchten, Groundwater recharge calculations as affected by temporal averaging of meteorological data. 12
3. Berger, K., Comparison and validation of SWMS_2D and HYDRUS (2D/3D) for capillary barriers using data of a 10-m tipping through. 13
4. Diamantopoulos, E., M. Walkinshaw, T. O'Geen, and T. Harter, Assessing nitrate leaching potential in California's agricultural soils through Hydrus-1D simulations. 18
5. Fér, M., R. Kodešová, A. Nikodem, and A. Klement, Using HYDRUS-1D for estimating soil hydraulic parameters from capillary rise and evaporation rates measured using a clay tank and soil respiration chamber, respectively, and their correlation with a net CO₂ exchange rate. 19
6. Filipović, V., Y. Coquet, V. Pot, P. Cambier, L. Filipović, S. Houot, and P. Benoit, Modeling the effect of tillage and urban waste compost addition on water flow and contaminant (Isoproturon, Cu, Cd) transport in agricultural field using HYDRUS-2D. 21
7. Glass, J., T. Fichtner, and C. Stefan, Stepwise calibration of hydraulic conductivity changes in a laboratory tank simulating managed aquifer recharge operation. 22
8. Hartmann, A., J. Šimůnek, M. K. Aidoo, S. J. Seidel, and N. Lazarovitch, A new HYDRUS add-on module to model the interactions between plant roots, soil properties, and water flow conditions in soils. 24

9. Hlaváčiková, H., V. Novák, J. Šimůnek, L. Holko, Z. Kostka, and M. Danko, The effects of rock fragment shapes and positions on modeled hydraulic conductivities of stone soils. 25
10. Hochfeldt, V., B. Pucher, and G. Langergraber, Simulating a full-scale two-stage vertical flow wetland system using the HYDRUS Wetland Module. 26
11. Iden, S. C., E. Diamantopoulos, and W. Durner, Capillary, film and vapour flow during transient evaporation: Inverse simulation of lab experiments using pressure head and humidity data. 27
12. Khaddam, I., S. Werisch, and N. Schuetze, A modeling-based optimization framework for reclamation leaching practices. 29
13. Liang, J., S. A. Bradford, J. Šimůnek, and A. Hartmann, Modeling non-equilibrium overland flow and transport processes using HYDRUS-1D. 33
14. Llorens, C., B. Pucher, and G. Langergraber, Determination of parameters describing the hydraulic behavior of filter materials for stormwater filters using HYDRUS. 34
15. Pucher, B., and G. Langergraber, Simulation results using the HYDRUS Wetland Module for different sized filter medias in vertical flow treatment wetlands. 39
16. Šimůnek, J., M. Th. van Genuchten, and M. Šejna, Current developments in the HYDRUS software packages. 42
17. Sittig, S. Coupling DREAM Suite and PEARL for parameter inference in a Bayesian framework. 43
18. Suskin, V. V., I. V. Kapyrin, and A. V. Rastorguev, Modeling unsaturated groundwater flow and transport in the vadose zone using GeRa code. 44
19. Szymkiewicz, A., J. Šimůnek, A. Gumuła-Kawęcka, S. Beegum, B. Leterme, B. Jaworska-Szulc, M. Pruszkowska Caceres, W. Gorczewska-Langner, R. Angulo-Jaramillo, and D. Jacques, Development and evaluation of the Hydrus package for Modflow. 45
20. Turco, M., G. Brunetti, A. Nikodem, M. Fér, R. Kodešová, and P. Piro, Water flow modeling in the highly permeable pavement using Hydrus-2D. 46

Poster Presentations:

1. Boas, T., D. Mallants, and J. Šimůnek, Episodic groundwater recharge in the arid interior of Australia: Multi-model transfer function approach. 15
2. Brunetti, G., J. Šimůnek, T. Wöhling, M. Turco, and P. Piro, A computationally efficient pseudo-2D model for the numerical analysis of permeable pavements. 17
3. Filipović, V., H. H. Gerke, L. Filipović, and M. Sommer, Simulating subsurface lateral flow in eroded soils with contrasting horizon properties using HYDRUS-2D. 20
4. Goddard, M., C. Mendoza, and M. Hassanizadeh, The movement of groundwater and dissolved salts through an oil-sand tailings storage facility using Hydrus-2D. 23
5. Klement, A., M. Fér, Š. Novotná, A. Nikodem, and R. Kodešová, Using HYDRUS-1D and 2D for assessing the impact of different root distributions on simulated root water uptake. 30
6. Kodešová, R., M. Fér, A. Klement, A. Nikodem, D. Teplá, P. Neuberger, and P. Bureš, Using HYDRUS-1D for simulating water flow and heat transport under various surface covers. 31

7. Mallants, D., A. Buter, and J. Šimůnek, A coupled HYDRUS-1D - PHREEQC analysis of major ion geochemistry and trace metal transport in soil leached with coal seam gas produced water. 35
8. Mallants, D., and J. Šimůnek, Defining safe water quality requirements for sustainable irrigation with coal seam gas produced water. 36
9. Mallants, D., J. Šimůnek, A. Taylor, M. Williams, and R. Kookana, Natural soil attenuation potential of hydraulic fracturing chemicals and their transformation products. 37
10. Nikodem, A., R. Kodešová, M. Fér, and A. Klement, Using HYDRUS codes and scaling factors characterizing spatial and temporal variability of soil hydraulic properties for assessing the impact of soil erosion on soil water hydrology. 38
11. Van den Eertwegh, G.A.P.H., R. P. Bartholomeus, D. G. Cirkel, and K. J. Raat, Sub-irrigation by controlled drainage systems using treated wwtp water: Field test and 2D modeling experiments. 47
12. Weiss, T., M. Slavík, and J. Bruthans, Model of near-surface flow in drying sandstone. 48
