

Contents

Preface	7
Chapter 1 – Preliminaries	9
1.1 Partial differential equations of evolution	9
1.2 Survey of some auxiliary notions and results	22
Chapter 2 – First order equations	35
2.1 Some equations of physical importance	35
2.2 One equation in one space variable	42
2.3 One equation in several space variables	55
2.4 A system in one space variable	71
2.5 A system in several space variables	90
Chapter 3 – Second order hyperbolic equations	99
3.1 The wave equation in one space variable	99
3.2 The telegraph equation in one space variable	121
3.3 The Fourier method	131
3.4 The wave and telegraph equations in several space variables	155
3.5 General second order hyperbolic equations	164
Chapter 4 – Second order parabolic equations	171
4.1 The heat equation	171
4.2 The heat equation in one space variable	181
4.3 The integral transform method	197
4.4 The Fourier method	215
Chapter 5 – Fourth order equations	240
5.1 Problems from the theory of elasticity	240
5.2 The beam equation	244
5.3 The plate equation	253
Bibliography	257
Index	260
