

1. INTRODUCTION	5
2. EVALUATION METHODS OF CROSS-COUNTRY MOVEMENT	7
2.1 Reasons and objectives of cross-country movement evaluation	7
2.2 Methods of solution of cross-country movement	7
3. THE ANALYSIS OF DATA BASIS RELEVANT TO CROSS-COUNTRY MOVEMENT	9
3.1 Military-geographic data basis for the evaluation of cross-country movement	9
3.2 The classification and quantification of geographic factors of cross-country movement	15
4. THE IMPACT OF RELIEF GRADIENT AND MICRORELIEF FORMS TO CROSS-COUNTRY MOVEMENT	20
4.1 The impact of relief gradient to cross-country movement	20
4.1.1 Profile section description of vehicle route	21
4.1.2 Calculation of coefficient of vehicle deceleration of impact of relief gradient (C_{11})	26
4.1.2.1 Determination of C_{11} according to DMA method	26
4.1.2.2 Determination of C_{11} on the basis of tractive charts	27
4.1.2.3 Determination of C_{11} at the basis of operational testing	30
4.1.3 Critical values of vehicle trafficability by impact of relief gradient	31
4.1.3.1 Swerving and vehicle rollover at the longitudinal slope	31
4.1.3.2 Swerving and vehicle rollover at the transverse slope	34
4.1.3.3 Maximum value of slope gradient passable by a vehicle	36
4.2 The impact of microrelief to cross-country movement	37
4.2.1 Calculation of coefficient of deceleration by impact of microrelief (C_{12})	38
4.2.1.1 Determination of vehicle deceleration coefficient by impact of microrelief overcoming	38
4.2.1.2 Determination of vehicle deceleration coefficient by impact of microrelief bypassing	40
5. THE IMPACT OF VEGETATION ON CROSS-COUNTRY MOVEMENT	42
5.1 Determination of vehicle deceleration coefficient C_2 by method of simulation of driving through a forest	42
5.1.1 Development of enumeration survey characteristics of vegetation	43
5.1.2 Information data	48
5.1.3 Elaboration of the model of trafficability of forest stands	49
5.1.3.1 Elaboration of graphics environment and tools for the work with subjects	49
5.1.3.2 Elements of model	49
5.1.3.3 Generation of a forest	49
5.2 Determination of vehicle deceleration coefficient by impact of vegetation with use of DMA method	53
5.3 Calculation of trunks forced passing capability by military vehicles	55
5.3.1 General solution of problem based on finite element method	55
5.3.2 Simplified concrete version	57
5.4 Practical tests of capability of selected vehicles to pass tree stand	65
5.5 Expert survey of evaluation of parameters of vegetation trafficability	65
5.6 Practical conclusions	65

6. THE IMPACT OF SOIL CONDITIONS ON CROSS-COUNTRY MOVEMENT	67
6.1 Determination of coefficient C_{31}	67
6.1.1 GeoS ACR Model	68
6.1.2 DMA Model	70
6.2 Determination of coefficient C_{32}	73
6.3 Determination of coefficient C_{33}	73
7. THE IMPACT OF WEATHER CONDITIONS ON CROSS-COUNTRY MOVEMENT	75
7.1 The impact of precipitation on soil trafficability	75
7.2 The impact of precipitation on trafficability of watercourses	77
8. THE IMPACT OF DRAINAGE ON CROSS-COUNTRY MOVEMENT	78
8.1 Factors affecting drainage trafficability	78
8.1.1 Overall covering of terrain by a drainage	79
8.1.2 Drainage structure	79
8.1.3 Characteristics of watercourse banks and water expense banks	80
8.1.4 Watercourse width	80
8.1.5 Depth of watercourses and water expenses	81
8.1.6 Character of a bottom	81
8.1.7 Water flow rate and flow speed	81
8.1.8 Climatic effects	83
8.1.9 Mutual position of drainage and other geographical subjects	83
8.2 Factors affecting changes of drainage trafficability	83
8.2.1 Causes of change of attributes of watercourse trafficability	85
8.2.1.1 Process of precipitation and discharging	85
8.2.1.2 Hydrologic transformation	86
8.2.1.3 Hydraulic transformation	89
8.3 Methodology of determination of traffic ability of watercourses and water expenses	93
9. THE IMPACT OF SETTLEMENTS ON CROSS-COUNTRY MOVEMENT	96
9.1 By-pass of settlements	96
9.2 Passage of settlements	97
10. THE IMPACT OF COMMUNICATIONS ON CROSS-COUNTRY MOVEMENT	99
11. THE IMPACT OF OTHER FACTORS ON CROSS-COUNTRY MOVEMENT	103
12. BIBLIOGRAPHY	104
13. INDEX	108
