

# Contents

<b>1 Introduction</b>	<b>5</b>
1.1 Motivation . . . . .	5
1.2 Objectives of the study . . . . .	5
<b>2 Overview of existing approaches</b>	<b>6</b>
2.1 Phenomenological criteria . . . . .	6
2.2 Continuum damage mechanics . . . . .	7
2.3 Void nucleation, growth and coalescence . . . . .	8
2.4 Porosity based models . . . . .	8
<b>3 Experiments</b>	<b>8</b>
3.1 Aluminium alloy 2024-T351 . . . . .	8
3.2 Experimental program . . . . .	10
<b>4 Stress and strain relationship</b>	<b>11</b>
<b>5 Damage accumulation</b>	<b>12</b>
<b>6 Material weakening</b>	<b>14</b>
<b>7 Plasticity</b>	<b>15</b>
7.1 Simulation of tension of smooth cylindrical specimen . . . . .	16
7.2 Simulations of tension of notched cylindrical specimens . . . . .	17
7.3 Simulation of tension of notched tubular specimen . . . . .	17
7.4 Simulation of torsion test . . . . .	18
7.5 Simulation of upsetting test . . . . .	19
<b>8 Ductile fracture criterion</b>	<b>19</b>
<b>9 Application of proposed approach</b>	<b>21</b>
9.1 Fracture at axisymmetric tension . . . . .	21
9.2 Fracture at plane strain tension . . . . .	22
9.3 Fracture at axisymmetric compression . . . . .	22
<b>10 Conclusions and future studies</b>	<b>24</b>
10.1 Conclusions . . . . .	24
10.2 Future studies . . . . .	24
