

PART I Introduction 1

CHAPTER 1 *A Global View of Sedimentary Deposits: Is It Big Enough?* 3

<i>Some Early Geologic Ideas About the Connection Between Sedimentary Deposits and Changes of Sea Level</i>	3	<i>The Earth's Atmosphere: Greenhouse Effect, Human Activities, Global-Scale Natural Processes, and Extraterrestrial Factors</i>	14
<i>Sedimentary Deposits and Climate: The Pleistocene Ice Ages</i>	10	<i>Suggestions for Further Reading</i>	20

PART II Particles, Sediments, and Sedimentary Rocks 21

CHAPTER 2 *Sediments: Names, Particles, Bulk Properties* 23

<i>Individual Particles</i>	23	<i>Pyroclastic Particles</i>	64
<i>Names of Particle Aggregates Based Mainly on Sizes and Sites of Origin of Particles</i>	25	<i>Intrabasinal Particles</i>	66
BOX 2.1 <i>Shapes- and Sizes of Sedimentary Particles</i>	28	BOX 2.4 <i>Organisms That Create Skeletal Debris Without Dying</i>	70
<i>Extrabasinal Particles</i>	43	BOX 2.5 <i>Lime Mud</i>	73
BOX 2.2 <i>Provenance Studies</i>	48	BOX 2.6 <i>Nonskeletal Carbonate Sands</i>	75
<i>Carbonaceous Sediments</i>	60	<i>Characteristics of Particle Surfaces</i>	83
BOX 2.3 <i>Minerals Through Time: Dates of Exposure or of Burial of Distinctive Parent Rocks; Unroofing Studies</i>	61	<i>Some Properties of Particle Aggregates</i>	84
		<i>Suggestions for Further Reading</i>	95

CHAPTER 3 *Burial Diagenesis and Other Ways of Turning Sediments into Sedimentary Rocks* 97

<i>Waters and Minerals</i>	97	<i>Subsurface Environments and Diagenesis;</i>	
<i>Early Diagenesis: Cements Precipitated in Near-Surface Environments</i>	107	<i>Subsurface-Precipitated Cements</i>	115
		<i>Suggestions for Further Reading</i>	122

CHAPTER 4	<i>Classifying and Naming Sedimentary Rocks</i>	123
<i>Descriptive- and Genetic Classifications</i>	123	<i>Classifying and Naming Extrabasinal Rocks</i> 139
<i>Classifying Sedimentary Rocks</i>	124	<i>Classifying and Naming Pyroclastic Rocks</i> 145
<i>Classifying and Naming Intrabasinal Rocks</i>	124	<i>Classifying and Naming Carbonaceous Rocks</i> 146
BOX 4.1 <i>Microcrystalline Carbonate (cf. Micrite) That Is Not Original Lime Mud (Micrite)</i>	128	<i>Suggestions for Further Reading</i> 147
PART III	<i>From Layers to Sequence- and Seismic Stratigraphy</i>	149
CHAPTER 5	<i>Layers and Their Associated Primary Sedimentary Structures: A First Look</i>	153
<i>Individual Layers</i>	153	<i>Successions of Strata</i> 177
<i>Strata and Time</i>	174	<i>Suggestions for Further Reading</i> 181
CHAPTER 6	<i>Mesosequence- and Seismic Stratigraphy</i>	183
<i>Base-Level Control of Sedimentation</i>	183	<i>Base-Level Controls on Deposition of Extrabasinal Sediments at Basin Margins</i> 201
BOX 6.1 <i>History of Development of Use of Sound in the Oceans: Sinking of the Titanic to First Use of Continuous Recording Echo Sounders</i>	184	<i>Introduction to Seismic Stratigraphy</i> 203
BOX 6.2 <i>Precision Depth Recorder (PDR), Turbidity Currents, Shape of the Ocean's Bottom, and Development of Continuous Seismic-Reflection Profiler for Revealing Subbottom Relationships</i>	186	<i>Fundamental Units of Sequence Stratigraphy</i> 214
<i>The Depositional Terraces at the Margins of a Basin: Three Critical Environments</i>	197	<i>Attempts to Infer Sea-Level History from Seismic Profiles</i> 218
		BOX 6.3 <i>Case History of Undathem, Clinothem, and Fondothem: Cenozoic Deposits of West Sumatra Forearc Basin, Indonesia</i> 220
		<i>Suggestions for Further Reading</i> 223
PART IV	<i>Process Sedimentology and Environments of Deposition</i>	225
CHAPTER 7	<i>Sedimentary Processes: Physical, Biological, and Chemical</i>	231
<i>Physical Processes</i>	231	<i>Chemical Processes</i> 269
<i>Biological Processes</i>	253	<i>Suggestions for Further Reading</i> 277
CHAPTER 8	<i>Circulation in the Atmosphere, in Modern Oceans, and in Basin Waters</i>	279
<i>Global Atmospheric Circulation</i>	279	<i>Circulation and Stagnation of Waters in Basins</i> 305
<i>Modern Oceans</i>	286	<i>Suggestions for Further Reading</i> 318

CHAPTER 9 *Deep-Water Settings* 319

<i>Death of the Quiet Ocean: Discovery of Gravity-Powered Bottom-Sediment Flows</i>	319	<i>Marine Nondepositional Environments; Authigenic Sediments and Condensed Sections</i>	346
<i>Major Morphologic Subdivisions of Deep-Water Basins as Related to Sediments</i>	322	<i>Biogeography of Open-Marine Organisms</i>	346
<i>Lateral- and Vertical Sedimentation</i>	327	<i>Characteristics of Deep-Water Deposits</i>	347
<i>Processes of Slope-Influenced Sedimentation and Their Products</i>	327	<i>Suggestions for Further Reading</i>	348

CHAPTER 10 *Shelf Seas and Epeiric Seas* 349

<i>Definitions and General Physiographic Settings</i>	349	<i>Epeiric Seas</i>	391
<i>Environmental Factors</i>	352	<i>Characteristics of Deposits of Shelf Seas and Epeiric Seas</i>	400
BOX 10.1 <i>Shoaling Transformations</i>	358	<i>Suggestions for Further Reading</i>	402
<i>Tectonic Activities</i>	381		
<i>Continental Shelves</i>	382		

CHAPTER 11 *Beaches and Barriers* 403

<i>Definitions</i>	403	<i>Autocyclic Patterns in Barrier Complexes</i>	432
<i>Morphodynamics of Marine Beaches</i>	408	<i>Inferred Examples of Ancient Barrier Complexes</i>	438
<i>Beach Sediments</i>	418	<i>Suggestions for Further Reading</i>	441
<i>Barriers</i>	422		

CHAPTER 12 *Marginal Flats: Peritidal Environments* 443

<i>General Setting</i>	443	BOX 12.1 <i>Coorong Lagoon, South Australia</i>	456
<i>Zonation of Peritidal Areas</i>	444	<i>Inferred Examples of Ancient Peritidal Complexes</i>	458
<i>Characteristic Features of Peritidal Sediments</i>	445	BOX 12.2 <i>Peritidal Complexes of Two Tropical Bays</i>	459
<i>Backbarrier-Peritidal Complexes in Nontropical Climates</i>	450	BOX 12.3 <i>Carbonates Only: Andros Island, Bahamas</i>	462
<i>Backbarrier-Peritidal Complexes in Hot, Arid Climates</i>	455	BOX 12.4 <i>Peritidal Complexes with Carbonates and Noncarbonate Evaporites: Sea-Marginal Sabkhas of the Arabian or Persian Gulf</i>	466
<i>Peritidal Complexes Marginal to Tropical Bays</i>	455	<i>Suggestions for Further Reading</i>	473
<i>Peritidal Complexes in Domains of Carbonate Sediments</i>	455		

CHAPTER 13 *The Mouths of Rivers: Estuaries, Deltas, and Fans at the Sea Shore* 475

<i>Transitional Environments Associated with the Mouths of Large Rivers</i>	475	<i>Fans at the Sea Shore (Fan Deltas)</i>	511
<i>Deltas</i>	482	<i>Suggestions for Further Reading</i>	513

CHAPTER 14 *Nonmarine Environments: Deserts, Rivers, Lakes, and Glaciers* 515

<i>Deserts and Semiarid Environments: Modern- and Ancient Deposits</i>	515	<i>Fluvial Environments: Modern- and Ancient Deposits</i>	527
--	-----	---	-----

BOX 14.1	<i>Fluvial–Eolian Interactions</i>	528	BOX 14.4	<i>Inferred Examples of Ancient Lake Deposits</i>	547
BOX 14.2	<i>Some Examples of Deposits of Ancient Meandering Rivers</i>	541		<i>Glacial Environments: Modern- and Ancient Deposits</i>	560
BOX 14.3	<i>Climatic Significance of Nonmarine Redbeds</i>	544		<i>Suggestions for Further Reading</i>	566
	<i>Lake Environments: Modern- and Ancient Deposits</i>	545			

PART V Large-Scale Patterns of Sedimentary Deposits 567

CHAPTER 15 *Extraterrestrial Forcing Functions* 569

<i>Elements of Planetary Orbits</i>	569	<i>The Sun's Orbit</i>	584
<i>Oceanic Tides: Earth–Moon and Sun</i>	573	<i>Sediment Production and Sediment Yield</i>	590
<i>Milankovitch Climatic Factors</i>	579	<i>Suggestions for Further Reading</i>	593

CHAPTER 16 *Principles of Stratigraphy* 595

<i>Thickness of Strata</i>	595	<i>Establishing Lateral Relationships of Strata</i>	612
<i>Exposures and Borings</i>	596	<i>Criteria of Time Equivalence</i>	613
<i>Information About Subsurface Strata</i>	598	<i>Stratigraphic Synthesis</i>	616
<i>Subdivisions of Stratigraphy and Their Distinctive Kinds of Stratigraphic Units</i>	606	<i>Suggestions for Further Reading</i>	626
<i>Naming Stratigraphic Units; The Stratigraphic Code</i>	612		

CHAPTER 17 *Basin Analysis* 627

<i>Fundamentals of Basin Analysis</i>	627	<i>The Concept of the Geosyncline</i>	644
BOX 17.1 <i>Concept of Sea Floor Spreading and Plate Tectonics</i>	628	<i>Where Do Sedimentology and Stratigraphy Stand Today?</i>	647
<i>Kinds of Basins</i>	635	<i>Suggestions for Further Reading</i>	649
