

Table of contents:

1 INTRODUCTION	7
2 NATURAL CONDITIONS OF THE REGION	10
2.1 Physical-geographic characteristics of the survey area	10
2.1.1 Determination of the survey area	10
2.1.2 Morphological configuration of the area	12
2.1.3 River network of the study area	13
2.1.4 Percipitation characteristics	14
2.2 Geological conditions	15
2.2.1 Base of the Intra-Sudeten Basin	15
2.2.2 Lower Palaeozoic	15
2.2.2.1 Intra-Sudeten Basin	16
2.2.3 Mesozoic sediments	16
2.2.3.1 Krzeszów Basin	16
2.2.3.2 Police Basin	18
2.2.3.3 Upper Cretaceous of the Hronov Basin	18
2.2.3.4 Kudowa depression and Batorów Basin	19
2.3 Hydrogeological conditions	19
2.3.1 Bedrock of the Intra-Sudeten Basin	19
2.3.2 Permian, Carboniferous of the Intra-Sudeten Basin	19
2.3.3 Mesozoic sediments	20
2.3.3.1 Krzeszów Basin	20
2.3.3.2 Police Basin	20
2.3.3.3 Upper Cretaceous of the Hronov Basin	24
2.3.3.4 Kudowa Depression	24
2.3.4 Quaternary Sediments	24
3 HISTORY OF THE POLISH-CZECH CO-OPERATION ON TRANSBOUNDARY WATERS	25
3.1 Co-operation of the Czech and Polish hydrologists and hydrogeologists	25
4 MONITORING OF GROUNDWATER AND SURFACE WATER	27
4.1 Result of regime measurements	35
4.2 Groundwater quality	39

5 HYDROLOGICAL BALANCE	40
5.1 Hydrological balance of the Upper Metuje catchment	42
5.1.1 Comparison of long-term fluctuation with hydrological drought in 2003-2004	42
5.2 Hydrological balance of the Stěnavá inter-basin between Jetřichov and Otovice	46
6 MATHEMATICAL MODELLING OF GROUNDWATER FLOW	49
6.1 Application fo models, objectives	49
6.2 Water management balance	49
6.3 Discretisation of the modelling space	55
6.4 Boundary conditions	57
6.5 Simulated groundwater table	57
6.6 Comparison of separated and simulated groundwater runoff at water gauging sites	62
6.7 Balance of stationary simulation with groundwater abstractions	62
6.8 Transient simulation of groundwater flow (1972-2002)	63
6.9 Selected results, further objectives	67
7 CONCLUSIONS	68
