

Theoretical Study of the State-selected Reactions of Electronically Excited Oxygen Ions with Methane Relevant for Titan's Atmosphere Jan Hrušák	150
Conformational Transitions and Membrane Binding of the Neuronal Calcium Sensor Recoverin Pavel Jungwirth	153
Modelling of Elementary Processes in Cold Rare-gas Plasmas René Kalus	156
Enzymatic Reaction Mechanisms Investigated by Car-Parrinello ab Initio Dynamics Jaroslav Koča	159
Detecting Materials in Coal-polyurethane Geocomposite CT-scans Marek Pecha, Martin Čermák, David Horák	162
Periodic DFT Studies of Zeolite Based Catalysts I. Štěpán Sklenák	165
Periodic DFT Studies of Zeolite Based Catalysts II. Štěpán Sklenák	168
Periodic DFT Studies of Zeolite Based Catalysts III. Štěpán Sklenák	171
Quantum-mechanical Simulations of Interfaces in Advanced Materials Mojmír Šob	174
Exploring the Effect of Loading Conditions on the Ideal Tensile Strength Mojmír Šob	177
Hydrophobic Impurities in Water Clusters Aleš Vítek	180

## 06 LIFE SCIENCES AND BIOLOGY

Estimation of Empirical Distribution Function for Testing of Modality of 3D Particle Sizes Based on 2D Observations Michal Burda	186
A non-Newtonian Model of Blood Capturing Segregation of Erythrocytes – First Step to Proper Modelling of the Blood Coagulation Process Marek Čapek	189
FEM Model of the Soft Tissues – Comparison with Ultrasound Elastography Jan Grepl	192
Convergence Testing of a K-space Pseudospectral Scheme for Transcranial Time-reversal Focusing Jiří Jaroš, Bradley E. Treeby	195
Structural Investigations of the Human Mitochondrial Lon Protease Lubomír Kováčik	198
Enhancement of the IT4IBlender Tool for Parallel Image Segmentation of Computer Tomography and Magnetic Resonance Images Tomáš Karásek	202
Modelling Beam Distortion During Focused Ultrasound Surgery in the Prostate Using k-Wave Jiří Jaroš	205

## 07 PHYSICS

Quantum Collisions of Electrons with Hydrogen Atoms Jakub Benda, Karel Houfek	210
TEBDOL – Parallel Simulation of Ultracold Atoms in Optical Lattices Miroslav Urbánek, Pavel Soldán	213
One-dimensional and Two-dimensional Magnetic Systems Dominik Legut	216
Comprehensive Modelling Long Time Evolution of Suddenly Ionised Rare Gas Clusters Through Multiscale Model and Full Dynamics Calculations Ivan Janeček	218
