INTRODUCTION	9
1 GENERAL PRINCIPLES OF REGIONALIZATION AND REGIONAL TYPIFICATION AND THEIR APPLICATION TO HYDROLOGY OR HYDROGEOGRAPHY	13
1.1 Basic concepts, definitions, problems, and methods of regionalization and regional typification	14
1.2 Specific features of the regionalization or regional typification of a territory of interest with regard to its hydrological attributes	19
2 REGIONAL REGRESION ESTIMATE OF MEAN ANNUAL RUNOFF	23
2.1 Methodology	24
2.1.1 A national regression equation vs. regional regression equations	24
2.1.2 Local regression equations vs. a regional regression equation	27
2.2 The national regression equation vs. regional regression equations	29
2.3 Local regression equations vs. regional regression equation	33
3 REGIONAL ESTIMATION OF DESIGN DICHARGES	37
3.1 Regional estimation of T-year maximum discharges in catchments without observations	39
3.2 Regional flood formulae for estimation of design floods in Slovakia	41
3.3 Methods based on the results of the revision of the traditional methods for regional flood frequency analysis in ungauged catchments in Slovakia	43
3.4 Methods based on regional regression	44
3.5 Approaches based on the Hosking and Wallis methodology	47
3.5.1 Identification of homogeneous groups	48

3.5.1.3	<i>Identification of groups for regional flood frequency analysis in Slovakia</i>	49
3.5.1.3.1	<i>The relationship between the basin characteristics vs. the at-site statistics and identification of regional classes.</i>	51
3.5.1.3.2	<i>Testing of the heterogeneity between and the homogeneity within the identified regional types from the point of view of L-Cv</i>	54
3.5.2	Estimation of index flood and selecting of regional distribution function	58
3.5.3	Practical applicability of regional methods for design flood computation in Slovakia	60
3.5.3.1	<i>Data analysis</i>	60
3.5.3.2	<i>Summer floods. Pooling based on physiographic and climatic catchment characteristics.</i>	61
3.5.3.3	<i>Summer and snowmelt floods: Pooling based on L-moments.</i>	68
3.5.3.3.1	<i>Results: Summer floods</i>	71
3.5.3.3.2	<i>Results: Snowmelt floods</i>	72
3.6	General recommendations for practical application	75
4	REGIONAL ESTIMATION OF PARAMETERS OF A MONTHLY WATER BALANCE MODEL	77
4.1	Methods of regional calibration of a monthly water balance model parameters	78
4.2	Input data and selection of pilot basins	81
4.3	The monthly water balance model	85
4.4	Single site calibration of the WatBal model	89
4.5	Regional calibration of the Watbal model using genetic algorithm	93
4.6	Results	99
4.7	Conclusions	104
