## 1

### Physical Basics of Spectroscopy

1.1	Photons: Carriers of Information and Energy	1
1.1.1	Photons: Carriers of Information	1
1.1.2	The Wave-Particle Duality	1
1.1.3	The Quantization of Electromagnetic Radiation	2
1.1.4	Photons: Carriers of Energy	2
1.1.5	Other Properties of Photons	2
1.2	The Electromagnetic Spectrum	2
1.2.1	The Usable Spectral Range for Amateurs	2
1.2.2	The Selection of the Spectral Range	2
1.2.3	Terminology of the Spectroscopic Wavebands	3
1.3	Wavelength and Energy	3
1.3.1	Preliminary Remarks	3
1.3.2	Units for Energy and Wavelength Applied in Spectroscopy	3
1.3.3	Planck's Energy Equation	4
1.4	The Continuum and Blackbody Radiation	4
1.4.1	The Blackbody as a Physical Model for Stellar Radiation	4
1.4.2	Planck's Radiation Law and Course of the Continuum Level	4
1.4.3	Wien's Displacement Law	5
1.4.4	Effective Temperature $T_{\text{eff}}$ and the Stefan-Boltzmann Law	5

## 2

### Electron Transitions and Formation of the Spectra

2.1	Simple Textbook Example: The Hydrogen Atom	7
2.2	Transition Types and Probabilities	8
2.2.1	Absorption	8
2.2.2	Emission	8
2.2.3	Ionization	8
2.2.4	Recombination	8
2.2.5	Electrons in the Free-Free Mode	9

2.3	Definitions and Notation	9
2.3.1	Ionization Stage versus Degree of Ionization	9
2.3.2	Astrophysical Notation for the Ionization Stage	9
2.4	The Hydrogen Spectral Series	9
2.4.1	The Photon Energy at the Wavelengths of the H-Balmer Series	9
2.4.2	The Photon Energy of Electron Transitions	10
2.4.3	Quantified Orbital Energy Level Diagram of the H-Balmer Series	10
2.4.4	The Lyman Limit of Hydrogen	10
2.4.5	The Balmer and Rydberg Equations	10
2.4.6	The Balmer, Paschen and Bracket Continua	11
2.5	Formation and Typology of Astronomical Spectra	11
2.5.1	Overview	11
2.5.2	The Three Basic Types of Spectra in the Context of the Sun	13
2.5.3	Molecular Absorption Band Spectrum	13
2.5.4	Molecular Absorption Band with Inversely Running Intensity Gradient	13
2.5.5	Composite or Integrated Spectrum	13
2.5.6	Reflectance Spectrum	14

## 3

### Quantum Mechanical Aspects of Spectroscopy

3.1	Quantum Mechanical View of Transition Probabilities	15
3.2	The Energy Levels of Multi-Electron Atoms	16
3.2.1	The Quantum Numbers $n$ , $l$ , $m$ , $s$ and Parity Operator $P$	16
3.2.2	Dipole Transitions, Laporte Rule and Forbidden Transitions	17
3.2.3	Grotrian Diagrams of Astrophysical Interest	18
3.2.4	Spectroscopic Notation: The Term Symbol	18
3.2.5	The Hyperfine Structure	19
3.3	The Schrödinger Equation	20
3.3.1	Preliminary Remarks	20
3.3.2	De Broglie's Electron Wave Model	20
3.3.3	The Schrödinger Equation and Astronomical Spectroscopy	21
3.3.4	Time-independent and Time-dependent Forms	21
3.3.5	Hydrogen	22

## 4

**Types and Function of Dispersive Elements** 24

- 4.1 Physical Principle of Dispersion 24
  - 4.1.1 Preliminary Remarks 24
  - 4.1.2 Dispersion by Refraction 24
  - 4.1.3 Dispersion by Diffraction 26
- 4.2 The Dispersive Principle of Prism Spectrographs 26
  - 4.2.1 Specific Glass Types for Prism Spectrographs 27
  - 4.2.2 Minimum Angle of Deviation and Angular Dispersion 27
  - 4.2.3 Resolving Power: A Measure of Performance 30
  - 4.2.4 Practical Applications of Prisms Today 30
- 4.3 The Dispersive Principle of Grating Spectrographs 30
  - 4.3.1 The Grating Equation 30
  - 4.3.2 Manufacturing Process and Performance Parameters 32
  - 4.3.3 Angular Dispersion 34
  - 4.3.4 Grating Diffraction Efficiency 35

## 5

**Types and Function of Spectrographs** 36

- 5.1 Slitless Spectrographs with Transmission Grating 36
  - 5.1.1 Available Transmission Gratings 36
- 5.2 Slit Spectrographs with Reflection or Transmission Grating 37
  - 5.2.1 The Classical Concept 37
  - 5.2.2 The Littrow Design 37
  - 5.2.3 Configurations and Options for the Development of Slit Spectrographs 37
  - 5.2.4 Anamorphic Magnification 39
  - 5.2.5 Spectrograph Throughput and Etendue 40
- 5.3 Commercial Slit Spectrographs for Amateur Applications 41
  - 5.3.1 ALPY, Shelyak Instruments 41
  - 5.3.2 DADOS, Baader Planetarium 41
  - 5.3.3 Lhires III, Shelyak Instruments 41
  - 5.3.4 LISA, Shelyak Instruments 41
  - 5.3.5 Minispec, Astro Spectroscopy Instruments 41
  - 5.3.6 Spectra L200, JTW Astronomy 41
  - 5.3.7 Starlight Xpress SX, Starlight Xpress 41
- 5.4 Echelle Spectrograph 43
  - 5.4.1 Overview 43
  - 5.4.2 Basic Designs of Echelle Spectrographs 44
- 5.5 Commercial Echelle Spectrographs for Amateur Applications 45
  - 5.5.1 BACHES Spectrograph, Baader Planetarium 45
  - 5.5.2 eShel, Shelyak Instruments 45
  - 5.5.3 SQUES, Eagleowloptics 45

- 5.6 Czerny–Turner Spectrograph 46
  - 5.6.1 Overview 46
  - 5.6.2 Application of Czerny–Turner Spectrographs for Amateurs 47
- 5.7 Spectral Information and Required Resolution 47

## 6

**Recording of the Spectra** 49

- 6.1 Visual Observation of Spectra 49
  - 6.1.1 Scotopic or Nighttime Vision 49
  - 6.1.2 Photopic or Daytime Vision 49
- 6.2 Recording of Spectra with Electronic Image Sensors 50
- 6.3 The Recording System: Telescope, Spectrograph and Camera 51
  - 6.3.1 Preliminary Remarks 51
  - 6.3.2 Limiting Magnitude of the System 51
  - 6.3.3 Exposure Times for Grating Spectrographs 51
  - 6.3.4 Pixel Size and Sampling with Slit Spectroscopy 53
  - 6.3.5 Determination of the Sampling by a Recorded Slit Image 53
  - 6.3.6 Analytical Determination of the Sampling 54
  - 6.3.7 Interference Fringes and Reflection Ghosts 54
- 6.4 Recording of Echelle Spectra 54
  - 6.4.1 Preliminary Remarks 54
  - 6.4.2 Special Features of Echelle Spectra 55
  - 6.4.3 The Orientation of the Spectral Image 55
  - 6.4.4 Focusing of the Spectral Image 56
  - 6.4.5 Exposure Times for Echelle Spectrographs 56
- 6.5 Influences of Mount and Guiding 56
  - 6.5.1 Mechanical and Structural Problems with Small Mounts 56
  - 6.5.2 The Option of Fiber Coupling 56
  - 6.5.3 Impact of the Spectrograph Load to Small Mounts 57
  - 6.5.4 The Mounting Angle of Spectrograph and Cameras 57
  - 6.5.5 Documentation of the Setup 58
  - 6.5.6 Positioning of Faint Objects on the Slit 58
  - 6.5.7 Specific Requirements to the Guiding Quality 58
  - 6.5.8 Load Distribution and Autoguiding Process with Small Mounts 59
  - 6.5.9 Autoguiding: Interaction of Hardware and Software Components 59
  - 6.5.10 Spectroscopic Aspects of the Guide Star 59
  - 6.5.11 Recording of Close Binary Star Components 60

## 7

**Processing of Recorded Spectra** 61

- 7.1 Available Software for Data Reduction 61
  - 7.1.1 Software Packages for the Amateur 61
  - 7.1.2 Professional Software Packages 62
  - 7.1.3 Spectroscopy @ Cyberspace: The Virtual Observatory 62

7.2	From the Recorded Spectrum to the Calibrated Intensity Profile	63
7.2.1	Preliminary Remarks	63
7.3	Removal of Light Pollution and Airglow	63
7.3.1	Objects of Point-shaped Appearance	63
7.3.2	Objects Appearing as 2D	63
7.4	Removal of Remaining Hot Pixels and Cosmics	63
7.5	Dark-frames and Flat-fielding	65
7.5.1	Dark-frames	65
7.5.2	Flat-fields	65
7.6	Processing of Echelle Spectra	65
7.6.1	The Processing of an Entire Echelle Spectrum	65
7.6.2	The Processing of Individual Orders	66
7.6.3	Subtraction of the Sky Background and Light Pollution	66

## 8

### Calibration of the Spectra

8.1	Calibration of the Wavelength	67
8.1.1	Preliminary Remarks	67
8.1.2	Relative Calibration Based on Known Lines	67
8.1.3	Absolute Calibration with Light Sources	67
8.1.4	Absolute Calibration by Unshifted Wavelengths of Atmospheric H <sub>2</sub> O Lines	67
8.1.5	Linear and Nonlinear Calibration	67
8.1.6	Practical Aspects to Minimize Sources of Errors	69
8.1.7	Heliocentric and Geocentric Corrections	69
8.1.8	The Selection of the Calibration Light Source	69
8.1.9	The Feeding of the Calibration Light	69
8.2	Calibration of the Spectral Flux Density (Intensity)	70
8.2.1	Preliminary Remarks	70
8.2.2	Selective Attenuation of the Continuum Intensity	70
8.2.3	Proportional Attenuation of the Spectral Lines	71
8.2.4	Information Content of the Pseudo-Continuum	71
8.2.5	Proportional Procedures for the Relative Flux Calibration	72
8.2.6	Rectification of the Continuum Intensity	72
8.2.7	Relative Flux Calibration by a Synthetic Continuum	73
8.2.8	Relative Flux Calibration by Recorded Standard Stars	74
8.2.9	Absolute Flux Calibration	74
8.2.10	Tasks and Required Calibration Procedures	75

## 9

### Analysis of the Spectra

9.1	Measurement of Spectral Lines	76
9.1.1	Measurement of the Wavelength in a Spectral Profile	76
9.1.2	Intensity Measurement in a Spectral Profile	76

9.1.3	Peak Intensity $I_p$ and Energy Flux $F$ of a Spectral Line	76
9.1.4	Peak Intensity and Energy Flux of an Absorption Line	76
9.1.5	Peak Intensity and Energy Flux of an Emission Line	77
9.1.6	Energy Flux of the Continuum	77
9.1.7	Superposition of Emission and Absorption Lines	77
9.1.8	The Continuum-Related Peak Intensity $P$	78
9.1.9	The Continuum-Related Energy Flux: Equivalent Width $EW$	78
9.1.10	Normalized Equivalent Width $W_\lambda$	79
9.1.11	Full Width at Half Maximum Height (FWHM)	79
9.1.12	Half Width at Half Depth (HWHD or HWHM)	79
9.1.13	Full Width at Zero Intensity (FWZI)	79
9.1.14	Half Width at Zero Intensity (HWZI)	80
9.1.15	Measurement of Asymmetry	80
9.1.16	Influence of the Spectrograph Resolution on the FWHM and $EW$ Values	80
9.1.17	Additional Measurement Options	81
9.2	Shape and Intensity of Spectral Lines	81
9.2.1	The Shape of Absorption Lines	81
9.2.2	The Shape of Emission Lines	81
9.2.3	The Information Content of the Line Shape	81
9.2.4	Blends	81
9.3	Identification of Spectral Lines	82
9.3.1	Task and Requirements	82
9.3.2	Practical Problems and Strategies for Solving Them	82
9.3.3	Tools for the Identification of Spectral Lines	82
9.4	Temperature Related Appearance of Elements and Molecules in the Spectra	83

## 10

### Temperature and Luminosity

10.1	Information Content of the Spectral Classification	85
10.1.1	The Hertzsprung–Russell Diagram	85
10.1.2	Information Content	85
10.1.3	Spectral Class, Stellar Mass and Life Expectancy	85
10.1.4	The Evolution of the Sun in the HRD	86
10.1.5	The Evolution of Massive Stars	87
10.2	Measurement of the Stellar Effective Temperature $T_{\text{eff}}$	87
10.2.1	Introduction	87
10.2.2	Temperature Estimation by the Spectral Class	87
10.2.3	Temperature Estimation by Applying Wien's Displacement Law	88
10.2.4	Temperature Determination Based on Individual Lines	89
10.2.5	The "Balmer Thermometer"	89

<b>10.3</b>	<b>Spectroscopic Distance Measurement</b>	<b>90</b>	<b>12.1.7</b>	<b>The Rotational Velocity of Stars</b>	<b>106</b>
10.3.1	Options for Spectroscopic Distance Measurement	90	12.1.8	Empirical Equations for $v \sin i$ in Function of FWHM	107
10.3.2	Term and Principle of Spectroscopic Parallax	91	12.1.9	Calibration Equations by F. Fekel	107
10.3.3	Spectral Class and Absolute Magnitude	91	12.1.10	Suitable Metal Lines for the FWHM Measurement	107
10.3.4	Wilson-Bappu Effect	91	12.1.11	Rotational Velocity of Circumstellar Disks around Be Stars	108
10.3.5	Absolute Visual Magnitude Indicator by Millward-Walker	92	12.1.12	Empirical Equations for the Rotational Velocity of the Disk	108
10.3.6	Distance Modulus and Estimation of the Distance	92	12.1.13	Distribution of the Rotational Velocity within the Disk	108
<b>11</b>			12.1.14	Analysis of Double Peak Profiles	108
<b>Expansion and Contraction</b>		<b>93</b>	12.1.15	The Outer Disk Radius $R_s$	109
<b>11.1</b>	<b>Radial Velocity and Expansion of the Spacetime Lattice</b>	<b>93</b>	<b>12.2</b>	<b>Estimation of Orbital Elements in Binary Systems</b>	<b>109</b>
11.1.1	The Radial Velocity	93	12.2.1	Introduction	109
11.1.2	The Classical Doppler Effect	93	12.2.2	Terms and Definitions	110
11.1.3	The Spectroscopic Doppler Equation	94	12.2.3	Some Basics of Celestial Mechanics	110
11.1.4	The $z$ -Value: A Fundamental Measure of Modern Cosmology	94	12.2.4	Spatial Orientation of the Orbit Plane	110
11.1.5	The Relativistic Doppler Equation	94	12.2.5	Analysis of the Doppler Shift $\Delta\lambda$ in SB2 Systems	111
11.1.6	Measurement of the Doppler Shift and Determination of Radial Velocity	95	12.2.6	The Calculation of the Individual Radial Velocities of $M_1$ and $M_2$	112
11.1.7	Radial Velocities of Nearby Stars	95	12.2.7	The Estimation of Some Orbital Parameters in SB2 Systems	112
11.1.8	Relative Doppler Shift within a Spectral Profile	95	<b>13</b>		
11.1.9	Radial Velocity of Galaxies	95	<b>Gravity, Magnetic Fields and Element Abundance</b>		<b>114</b>
11.1.10	The Expansion of the Spacetime Lattice	95	<b>13.1</b>	<b>Measurement of the Surface Gravity</b>	<b>114</b>
11.1.11	The Apparent Dilemma at $z > 1$	96	13.1.1	Overview	114
11.1.12	The $z$ -Value: Considered as a Measure for the Past	96	13.1.2	Method Based on the Wilson-Bappu Effect	114
11.1.13	Messier Galaxies: Radial Velocity and Cosmological Spacetime Expansion	97	13.1.3	Further Surface Gravity Indicators	114
11.1.14	The Redshift of Quasar 3C273	97	<b>13.2</b>	<b>Measurement of Stellar Magnetic Fields</b>	<b>116</b>
11.1.15	The Gravitational Redshift or Einstein Shift	97	13.2.1	Overview	116
11.1.16	Age Estimation of the Universe	97	13.2.2	The Zeeman Effect	116
<b>11.2</b>	<b>Measurement of Expansion and Contraction</b>	<b>99</b>	13.2.3	Spectral Lines with Strong Landé Factors	117
11.2.1	P Cygni Profiles	99	13.2.4	Possible Applications for Amateurs	117
11.2.2	Inverse P Cygni Profiles	100	<b>13.3</b>	<b>Abundance of Elements</b>	<b>117</b>
11.2.3	Broadening of the Emission Lines	100	13.3.1	Astrophysical Definition of Element Abundance	117
11.2.4	Splitting of the Emission Lines	101	13.3.2	Astrophysical Definition of Metallicity $Z$ (Metal Abundance)	117
<b>12</b>			13.3.3	Quantitative Determination of the Abundance	118
<b>Rotation and Orbital Elements</b>		<b>103</b>	13.3.4	Relative Abundance of Stars of Similar Spectral Class	118
<b>12.1</b>	<b>Measurement of Rotational Velocity</b>	<b>103</b>	<b>14</b>		
12.1.1	Terms and Definitions	103	<b>Analysis of Emission Nebulae</b>		<b>120</b>
12.1.2	The Rotational Velocity of Apparent 3D Objects	103	<b>14.1</b>	<b>The Balmer Decrement</b>	<b>120</b>
12.1.3	The Rotational Velocity of Large Planets	104	14.1.1	Introduction	120
12.1.4	The Rotational Velocity of Galaxies	104			
12.1.5	Example of a Light Reflecting Object	104			
12.1.6	Example of a Self-Luminous Celestial Body	105			

14.1.2	Definition of the Balmer Decrement	120	14.2.11	Cooling Mechanism by Forbidden Transitions	127
14.1.3	Theoretical Balmer Decrement for Emission Nebulae	120	14.2.12	Influences of $T_e$ , $N_e$ and Transition Probability A on the Cooling Mechanism	127
14.1.4	Balmer Decrements at Stellar and other Astronomical Objects	121	14.2.13	Estimation of $T_e$ and $N_e$ by the O III and N II Methods	128
14.1.5	Applications of the Balmer Decrement in the Amateur Sector	121	14.2.14	Estimation of the Electron Density by the S II and O II Ratio	129
14.1.6	Measurement of the Balmer Decrement by Amateurs	122			
14.1.7	Spectroscopic Estimation of Interstellar Extinction	122	<b>15</b>		
14.1.8	Extinction Correction by the Measured Balmer Decrement	122	<b>Amateurs and Astronomical Science</b>	130	
14.1.9	Balmer Decrement and Color Excess	122	15.1	Participation in Astronomical Research	130
14.2	Plasma Diagnostics for Emission Nebulae	123	15.1.1	Astronomical Spectroscopy and the Pro-Am Culture	130
14.2.1	Preliminary Remarks	123	15.1.2	The Structure of a Pro-Am Collaboration	131
14.2.2	The Photoionization in Emission Nebulae	123	15.2	Observation Campaigns for Amateurs	132
14.2.3	Kinetic Energy and Maxwellian Velocity Distribution of Electrons	123	15.3	Contributions by Amateurs	133
14.2.4	Significant Processes within Ionized Nebular Plasmas	123	15.3.1	Short-term Campaign (Months)	133
14.2.5	Recombination Process (Case A)	123	15.3.2	Long-term Campaign (Years)	133
14.2.6	Line Emission by Electron Transitions (Case B)	124	Appendix A	Abbreviations, Acronyms and Common Units	134
14.2.7	Line Emission by Collision Excitation (Case C)	124	Appendix B	Absolute Magnitudes of Main Sequence Stars	137
14.2.8	Line Emission by Direct Absorption (Case D)	124	Appendix C	The Solar Echelle Spectrum: An Aid to Orientation	139
14.2.9	Line Emission by Forbidden Transitions	125	Appendix D	Flip Mirror and Calibration Light Source	142
14.2.10	Scheme of the Fluorescence Processes in Emission Nebulae	126	References and Further Reading	143	
			Index	148
