

Contents

Foreword	5
Introduction	7
Part one. Group Maze experiments	8
1. Group problem as a graph	8
2. Group Maze as an instrument for studying group learning	13
a. The game	14
b. Standard instructions	16
3. Measurements of Group Maze behaviour	20
a. The subjects	20
b. Variables	20
c. Reliability of measurements and constancy of behaviour in Group Maze ..	24
4. Experimental results	26
a. Learning on the group level	26
b. Specific characteristics of the group problem solving; analysis of the com- munication	33
c. Role structure	37
5. A special design	40
a. An experiment with prepared subjects	40
b. Results: leaders and non-leaders	41
6. Further designs for Group Maze experimentation	46
a. Varying the size of the group and the communication network	47
b. Content of communication	49
1) Use of scaled expressions	49
2) Evaluations	50
3) Attempts to influence the climate or the feeling of the group	50
4) Attempts to influence the working style	50
5) Role-sending messages	50
6) Group decision messages	50
7) Conditional messages	50
8) Indirect messages	51
c. Variations of the problem	51
1) Problem series	51
2) Problem difficulty	51
3) Roundabout-way problems	52
d. Group formation	52
e. Groups with prepared subjects	53
f. Variations of the instructions and special designs	53
7. Group Maze as a training instrument	54
Part two. Simulations of Group Maze behaviour applying a stochastic theory of social interaction	56

1. The simulation program	56
a. The main rules	56
b. The simulation process	58
2. Simulation runs. Parameters used	66
3. Programs for the analysis	68
4. Results of the Run 1, 2, and 3	69
a. Goodness-of-fit	69
b. Effect of the parameter values	74
c. Further analysis of the stat-groups	78
5. Simulating fictive groups	79
Summary	81
