

Contents

- 1 Introduction 1
 - 1.1 Brief historical review 1
 - 1.2 The uniqueness of rubber 3
 - 1.3 Survey of the current Handbook 4
 - 1.4 Closing remarks 10
- 2 Natural rubber 11
 - 2.1 Introduction 11
 - 2.2 Source 11
 - 2.3 Cultivation 13
 - 2.4 Harvesting 14
 - 2.5 Biosynthesis of rubber 15
 - 2.6 Composition of latex 16
 - 2.7 Crop collection 17
 - 2.7.1 Pre-processing of latex 18
 - 2.8 Crop processing 19
 - 2.8.1 Preservation and concentration of latex 19
 - 2.8.2 Ribbed smoked sheet (RSS) 20
 - 2.8.3 Pale latex crepe and sole crepe 22
 - 2.8.4 Field coagulum crepe 23
 - 2.8.5 Technically specified rubbers (TSR) 23
 - 2.9 Modified forms of NR 25
 - 2.9.1 Physically modified forms 26

2.9.2	Chemically modified forms of NR	28
2.10	Properties of natural rubber	31
2.10.1	Raw rubber	31
2.10.2	Vulcanised rubber	33
2.11	Vulcanisation	36
2.11.1	Vulcanisation with sulphur	37
2.11.2	Non-sulphur vulcanisation	38
2.12	Applications	39
2.12.1	Tyres (see also Chapter 11)	39
2.12.2	Engineering applications	40
2.12.3	Conveyor beltings	41
2.12.4	Linings	41
3	Synthetic elastomers	47
3.1	Synthetic and natural elastomers	47
3.1.1	Synthesis	47
3.1.2	Mechanical properties	48
3.1.3	The need for synthetic elastomers	49
3.1.4	Compounding and vulcanisation	51
3.1.5	Synthetic elastomer polymerisation	51
3.1.6	Mechanisms	53
3.1.7	Polymer synthesis processes	54
3.2	Diene elastomers	55
3.2.1	Polybutadiene (BR)	56
3.2.2	Polyisoprene (IR)	58
3.2.3	Styrene-butadiene rubber (SBR)	59
3.3	Saturated elastomer	61
3.3.1	Ethylene-propylene copolymers (EPM) and ethylene-propylene-diene terpolymers (EPDM)	61
3.3.2	Butyl and halobutyl rubbers (IIR and BIIR/CIIR)	64

3.3.3	Ethylene-acrylic elastomers (EAM)	66
3.4	Solvent resistant elastomers	67
3.4.1	Nitrile rubber (NBR)	68
3.4.2	Polychloroprene (CR)	70
3.4.3	Acrylic elastomers (ACM)	72
3.4.4	Chlorosulphonated polyethylene (CSM)	74
3.5	Temperature resistant elastomers	75
3.5.1	Silicone rubber (Q)	75
3.5.2	Fluorocarbon elastomers (FKM)	77
3.6	Specialty elastomers	79
3.6.1	Phosphazenes (FZ)	79
3.6.2	Polyethers	80
3.6.3	Structure	81
3.6.3	Ring opened polymers (TPA, TOR)	81
3.7	Thermoplastic elastomers	82
3.7.1	Styrene block copolymers	82
3.7.2	Thermoplastic polyurethanes (TPU)	83
	Thermoplastic elastomers	87
4.1	Introduction	87
4.1.1	Thermoplastic elastomers versus thermoset rubbers	88
4.1.2	Types of thermoplastic elastomers	91
4.2	Block copolymers	94
4.2.1	Polystyrene/elastomer block copolymers	95
4.2.2	Polyester/elastomer block copolymers	100
4.2.3	Polyamide/elastomer block copolymers	101
4.2.4	Polyurethane/elastomer block copolymers	103
4.3	Dynamically vulcanised rubber/plastic blends	107
4.3.1	EPDM/polyolefin	108
4.3.2	NBR/polyolefin	109

4.3.3	Natural rubber/polyolefin	111
4.3.4	Butyl rubber/polyolefin	111
4.3.5	Melt processable rubber	112
4.4	Ionic thermoplastic elastomers	113
4.4.1	Ionic elastomers	113
4.4.2	Ionomeric polyblends	117
5	Fillers	131
5.1	Preface	131
5.2	Manufacture of carbon black	131
5.3	Surface and particle structure of carbon black	133
5.4	Carbon black aggregate structure	138
5.5	Classification of carbon black	141
5.6	Mixing of carbon black with rubber and carbon black dispersion	143
5.7	Rheology of carbon black filled rubber	146
5.8	Viscoelasticity of carbon black filled rubber	148
5.9	Physical properties of carbon black filled rubber	151
5.10	Non-black fillers and application	155
5.10.1	Calcium carbonate	156
5.10.2	Clay	157
5.10.3	Silica	158
5.11	Summary	162
6	Rubber additives - compounding ingredients	167
6.1	Vulcanising agents	167
6.1.1	Sulphur	167
6.1.2	Sulphur donors	168
6.1.3	Peroxides	168
6.1.4	Urethane crosslinking	172

6.1.5	Metal oxides	173
6.1.6	Other vulcanising agents	173
6.2	Vulcanisation accelerators	173
6.2.1	Sulphenamides	174
6.2.2	Thiazoles	177
6.2.3	Guanidines	178
6.2.4	Thiurams	179
6.2.5	Dithiocarbamates	179
6.2.6	Dithiophosphates	180
6.2.7	Miscellaneous	181
6.2.8	N-Nitrosamines and accelerators	181
6.3	Activators of vulcanisation	183
6.4	Retarders and inhibitors of vulcanisation	184
6.5	Antidegradants	185
6.5.1	Antioxidants	186
6.5.2	Antiozonants	190
6.6	Antireversion agents	193
6.6.1	Zinc carboxylates	193
6.6.2	Thiophosphoryl derivatives	194
6.6.3	Silane coupling agents	195
6.6.4	Sulphenimide accelerator	195
6.6.5	Hexamethylene-1,6-bis thiosulphate disodium dihydrate (Duralink HTS)	196
6.6.6	1,3-Bis(citraconimidomethyl)benzene (BCI-MX; Perkalink 900)	197
6.7	Plasticisers and softeners	198
6.7.1	Petroleum products	198
6.7.2	Coal tar products	199
6.7.3	Pine products	199
6.7.4	Synthetic softeners	200

6.7.5	Other products	200
6.8	Miscellaneous ingredients	200
6.8.1	Peptising agents	201
6.8.2	Blowing agents	202
6.8.3	Bonding agents	202
6.8.4	Pigments	203
6.9	Concluding remarks	203
7	Rubber mixing	209
7.1	Introduction	209
7.2	Mechanisms of mixing	210
7.2.1	Viscosity reduction	210
7.2.2	Incorporation	211
7.2.3	Dispersion	213
7.2.4	Distribution	213
7.3	Rheology of mixing	215
7.3.1	Flow behaviour of rubber compounds	215
7.3.2	Measurement of state-of-mix	216
7.3.3	Dependence of flow behaviour on state-of-mix	218
7.3.4	Kinetics of dispersive mixing	220
7.3.5	Mixing of blend compounds	222
7.4	Heat history	222
7.5	Batch mixing methods and systems	223
7.5.1	Two-roll mills	223
7.5.2	Internal mixers – design and performance	226
7.5.3	Internal mixers – operation	231
7.5.4	Mixing sequences	233
7.6	Batch-off extruders and festoon coolers	235
7.7	Materials handling	237

7.8	Instrumentation and control of mixing	239
7.9	Continuous mixing	242
7.9.1	Continuous mixing versus batch mixing	242
7.9.2	Powder weighing, blending and handling	242
7.9.3	Continuous mixing – principles	243
7.9.4	Continuous mixers - examples	244
7.10	Acknowledgements	247
	Durability of engineering products	251
8.1	Introduction	251
8.2	Outline design factors of seals, hoses and cables	253
8.2.1	Seals	253
8.2.2	Hoses	257
8.2.3	Cables	259
8.3	Durability aspects	261
8.3.1	The structural nature of rubbers	261
8.3.2	General mechanical properties	262
8.3.3	Properties for long-term performance	262
8.4	Definitions of failure	268
8.5	Life assessment	269
8.5.1	Predictions	270
8.5.2	Permeation/diffusion etc at high pressures/different temperatures	273
8.5.3	Factors which can override predictions	273
8.6	Case studies – components and models	273
8.6.1	Predictions by time alone	274
8.6.2	Effects of fluid environments	278
8.6.3	Effects of temperature on predictions	281

9	Engineering with elastomers	287
9.1	Introduction	287
9.2	Design equations – static force/deflection behaviour	288
9.2.1	Shear	288
9.2.2	Compression	291
9.2.3	Curved bearings	292
9.2.4	Non-linearity	294
9.2.5	Instability	294
9.3	Design principles-dynamic properties	295
9.3.1	Theoretical background	295
9.3.2	Transmissibility	296
9.3.3	Effect of elastomer type and temperature	296
9.3.4	Effect of non-linearity	298
9.3.5	Effect of fillers and strain amplitude	299
9.4	Fatigue of elastomers for engineering components	299
9.4.1	Material behaviour	300
9.4.2	Calculation of tearing energies for different geometry components	300
9.4.3	Finite element analysis	303
