

Contents

1	Complex Numbers	1
1.1	The History of Numbers	1
1.2	Why Complex Numbers?	2
1.3	Properties of Complex Numbers	5
	Further Reading	11
2	Matrices	12
2.1	Matrix Algebra	12
2.2	Determinants	19
2.3	Solving Matrix Equations	27
2.4	Transforms	40
2.5	Exponentials of Matrices	47
	Further Reading	50
3	Vectors	51
3.1	A Preliminary Definition of Vectors	51
3.2	Euclidean Vector Algebra and Inner Product Spaces	55
3.3	Vector Multiplication	60
3.4	Matrix Notation	78
3.5	Vector Transformations	86
3.6	Dirac Notation and Operator Matrices	95

Essential Mathematics for NMR and MRI Spectroscopists

3.7	Hilbert Space	111
3.8	Merging Vector Spaces	112
	Further Reading	118
4	Vector Calculus	119
4.1	Vector Differentiation	119
4.2	Vector Integration	128
4.3	Curvilinear Coordinates and Grad, Div and Curl	149
4.4	Green's Theorem, Gauss's Theorem and Stokes' Theorem	157
4.5	Vector Rotation in a Rotating Frame of Reference	173
	Further Reading	176
5	Introductory Tensor Analysis	177
5.1	Dyadic Algebra	177
5.2	The Gradient of a Vector	185
5.3	Transformations	186
5.4	A Tensor Definition	188
5.5	Isotropic Tensors	190
5.6	Symmetric, Antisymmetric and Irreducible Tensors	194
	Further Reading	196
6	Probability and Statistics	197
6.1	Simple Probability and Statistics	197
6.2	Permutations and Combinations	200
6.3	Stirling's Approximation	204
6.4	Probability Distributions	205
6.5	The Boltzmann Distribution	207
6.6	Random Processes and the Autocorrelation Function	217
	Further Reading	219

7	Waves	220
7.1	Characteristics of Waves	220
7.2	The Classical Wave Equation	223
7.3	Superposition of Waves	231
7.4	Standing Waves	232
	Further Reading	234

8	The Fourier Transform	235
8.1	Fourier Series	235
8.2	Properties of the Time-Domain Functions	243
8.3	The Fourier Integral	248
8.4	Properties of Fourier Transforms	250
8.5	Some Important Fourier Pairs	253
8.6	Convolution	268
8.7	Impulse Sampling and the Nyquist Frequency	274
8.8	The Discrete Fourier Transform	279
8.9	Real and Complex DFTs	287
8.10	The Fast Fourier Transform	294
	Further Reading	304

9	Introductory Classical Mechanics	305
9.1	Newton's Laws	305
9.2	Energy	310
9.3	Generalised Coordinates	312
9.4	The Lagrangian	313
9.5	The Hamiltonian	318
9.6	Classical Angular Momentum	319
	Further Reading	326

10	Special Relativity	327
10.1	The Lorentz Transformation Equations	327
10.2	Kinematic Consequences of the Lorentz Transformations	336

10.3	Space-time	339
10.4	Minkowski Diagrams	344
	Further Reading	348
11	Electric and Magnetic Fields	349
11.1	Coulomb's Law and the Electric Field	349
11.2	Field Flux and Gauss's Law	352
11.3	The Magnetic Field	359
11.4	Maxwell's Laws	377
11.5	Special Relativity and Magnetism	382
11.6	Electric Dipoles	393
11.7	Magnetic Dipoles	399
	Further Reading	411
12	The Magnetic Moment and the Bloch Equations	412
12.1	The Bloch Equations	412
12.2	The Vector Model of NMR Spectroscopy	427
	Further Reading	433
13	Introductory Quantum Mechanics	435
13.1	Historical	435
13.2	The Basics of Quantum Mechanics	444
13.3	The Postulates of Quantum Mechanics	446
13.4	Vector Notation	451
13.5	The Uncertainty Principle	452
	Further Reading	459
14	The Hamiltonians of NMR	460
14.1	The NMR Hamiltonian	460
14.2	The Zeeman Field Hamiltonian	461

14.3	The Chemical Shift Hamiltonian	463
14.4	The Dipolar Coupling Hamiltonian	465
14.5	The Indirect (Scalar) Coupling Hamiltonian	465
14.6	The RF-Field Hamiltonian	466
	Further Reading	468
15	The Quantum Mechanics of Angular Momentum	469
15.1	A Brief History	469
15.2	General Angular Momentum	470
15.3	Angular Momentum Operators in Spherical Coordinates	481
15.4	Angular Momentum Operator Matrices	483
15.5	Expectation Values	488
15.6	Time Evolution	490
	Further Reading	498
16	NMR Rotation Operators	499
16.1	Rotation in Euclidean Space	499
16.2	The Euler Rotation Matrix	502
16.3	Angular Momentum Rotation Operators	506
	Further Reading	509
17	Density Operators and Matrices	510
17.1	The Density Matrix	510
17.2	Pure and Mixed States	514
17.3	The Time Evolution of the Density Matrix	518
17.4	Multiple-Spin Density Matrices	527
17.5	Spin-One	543
17.6	Density Matrices and Perturbation Calculations	549
17.7	Strong Coupling	553
	Further Reading	560

18	The Product Operator Formalism	561
18.1	The Density Operator Method Revisited	561
18.2	The Product Operator Method	563
18.3	Multiple Quantum Coherence	568
18.4	Product Operator Rotations	570
18.5	Pulse Sequence Analysis	573
18.6	Three Spins and Higher	580
18.7	The Product Operator Tree	588
18.8	Single Transition Product Operators	592
	Further Reading	597

19	Coherence Transfer	598
19.1	Phase Cycling	598
19.2	Coherence Order	603
19.3	Coherence Transfer Pathways	612
19.4	Phase Cycling Revisited	617
19.5	Pulsed Field Gradients	626
	Further Reading	635

20	Relaxation and the NOE	636
20.1	Spin Temperature	636
20.2	Longitudinal T_1 Relaxation	638
20.3	Transverse T_2 Relaxation	640
20.4	How Does Relaxation Work?	643
20.5	The Nuclear Overhauser Enhancement	661
	Further Reading	668

21	Data Processing	670
21.1	Fourier Transform Spectroscopy	670
21.2	The 2D Fourier Transform	679
21.3	Window Functions	682
21.4	Zero Filling	685
21.5	Digital Filtering	689
21.6	Oversampling	691

21.7	Phase Correction	692
21.8	Linear Prediction	695
21.9	Baseline Correction	698
	Further Reading	700

22	Magnetic Resonance Imaging	701
22.1	Selective Pulses	701
22.2	Gradients	702
22.3	Putting It All Together	711
22.4	The Discrete Fourier Transform	715
22.5	T_1 , T_2 and Spin Density Weighting	718
22.6	Pulse Sequences	723
	Further Reading	728

23	Electronics	729
23.1	The Modern NMR Spectrometer	729
23.2	DC Electronics	731
23.3	AC Electronics	747
23.4	AC Circuits	756
23.5	Antenna Theory	772
23.6	Analogue-to-Digital Conversion	782
	Further Reading	785

Appendix A	Identities, Proofs and Miscellany	786
A.1	Euler's Formula	786
A.2	The Binomial Expansion	788
A.3	Trigonometric Identities	791
A.4	Direction Cosines	797
A.5	The Area of a Parallelogram	799
A.6	The Area of a Trapezoid	800
A.7	The Number 'e'	801
A.8	Alternate Coordinate Systems	803
A.9	The Fundamental Theorem of Calculus	811
A.10	Some Commonly Used Derivatives and Their Properties	815

A.11	Partial Derivatives	816
A.12	Parametric Equations	817
A.13	Some Commonly Used Integrals and Their Properties	819
A.14	Integration by Substitution	819
A.15	Integration by Parts	820
A.16	The Trapezoid Rule for Estimating Definite Integrals	821
A.17	Solving Differential Equations	823
A.18	Commutator Algebra	827
A.19	L'Hopital's Rule	829
A.20	Even and Odd Functions	831
A.21	Group Theory	834

Appendix B	A Bruker to Varian Translation Table	839
