

# Contents

<b>1</b>	<b>Linear space</b>	<b>9</b>
1.1	The definition of linear space . . . . .	9
1.2	Finitely dimensional linear spaces. . . . .	22
1.3	Problems . . . . .	28
<b>2</b>	<b>Matrices, determinants, linear equations</b>	<b>33</b>
2.1	The multiplication of matrices . . . . .	33
2.2	The rank of a matrix . . . . .	35
2.3	The inverse matrix . . . . .	39
2.4	Determinants . . . . .	43
2.5	Systems of linear equations . . . . .	56
2.6	Miscellaneous examples . . . . .	65
2.7	Problems . . . . .	71
<b>3</b>	<b>Linear transformations</b>	<b>83</b>
3.1	Introduction. Basic examples. . . . .	83
3.2	Linear transformations given by images of bases . . . . .	90
3.3	The matrix of linear transformation w.r.t. bases . . . . .	92
3.4	Isomorphic spaces (only dimension matters!) . . . . .	99
3.5	Miscellaneous examples . . . . .	100
3.6	Problems . . . . .	102
<b>4</b>	<b>The linear space <math>V_3</math> of “free” vectors</b>	<b>107</b>
4.1	From “geometric vectors” to “free” vectors . . . . .	107
4.2	Scalar product of vectors . . . . .	109
4.3	The vector product in $V_3$ . . . . .	112
4.4	Linear varieties in $E_3$ (scalar and vector products) . . . . .	115
4.5	Analytic geometry in $E_3$ . . . . .	117
4.6	Miscellaneous examples . . . . .	128
4.7	Transforming the Cartesian coordinates . . . . .	130
4.8	Problems . . . . .	131
<b>5</b>	<b>Non-negative solution of a system of linear equations (the Farkas lemma)</b>	<b>137</b>
<b>6</b>	<b>Bilinear and quadratic forms. Scalar product.</b>	<b>143</b>
6.1	Bilinear forms . . . . .	143
6.2	Linear spaces with a scalar product . . . . .	152

<b>7</b>	<b>Linear spaces with a binary operation</b>	<b>155</b>
<b>8</b>	<b>Tensor product and Kronecker product</b>	<b>165</b>
<b>9</b>	<b>Eigenvalues and eigenvectors</b>	<b>175</b>
<b>10</b>	<b>Systems of linear differential equations</b>	<b>179</b>
10.1	Systems of linear equations . . . . .	179
10.2	Homogeneous linear systems . . . . .	180
10.3	Elimination method . . . . .	181
10.4	Nonhomogeneous systems . . . . .	183
10.5	Systems of linear equations with constant coefficients . . . . .	187
10.6	Algorithmic approach . . . . .	203
10.7	Method of undetermined coefficients . . . . .	208
10.8	Antielimination . . . . .	212
<b>Appendix A Mathematical Induction</b>		<b>215</b>
A.1	Problems . . . . .	218
<b>Appendix B Polynomials and rational functions</b>		<b>221</b>
B.1	Preliminaries . . . . .	221
B.2	Dividing a polynomial by a polynomial . . . . .	222
B.3	Horner's schema . . . . .	224
B.4	Roots of polynomials (multiplicity of roots) . . . . .	226
B.5	The fundamental theorem of algebra and consequences . . . . .	231
B.6	Decomposition of a rational function into fractions . . . . .	234
B.7	Appendix to Appendix B.6—The proof of the main theorem . . . . .	242
B.8	Problems . . . . .	243
<b>Appendix C Fundamental theorem of algebra—elementary proof</b>		<b>247</b>
