

Contents

Author's foreword 11

1. Scientific research in contemporary perspective 15

Scientists and the public 15

Are there really 'two cultures'—the scientific and the a-scientific? 16

Scientific research as an agent of diversity and change 17

Socio-economic aspects 19

Cultural aspects 22

Investments and returns 23

The universalism of science 29

2. Distinguishing features of scientific research 32

Introduction 32

Analogies from market research: data-gathering and bias 33

Analogies from historical research: unique events and records 37

Scientific research 39

Repeatability and generalization 39

Bias, correlation and the identification of variables 41

Properties and classification 43

Differences and controls: quantification and standardization 44

The scientific method 48

Theories: the nature of knowledge and the direction of causality 48

Observations and inference: the formulation of hypotheses 52

Experiments and the testing of hypotheses 56

Continuity and anti-authoritarianism: paradigms and pragmatism 58

Relating past to present	61
Research fundamental, research applied	62
Research scientific, research technological	63
The science/technology relationship	65
3. Preparation for, and practice of, a career in scientific research	68
The formation of the scientific researcher	68
Attributes and motivations	72
The acquisition of craft skills and lore	74
The disciplines of collaboration and communication	76
Collaboration	76
Communication	78
Non-structured learning from one's peers of the scientific community	81
The career of the scientific researcher	84
Choice of environment for training	84
Career options	87
Recruitment, selection, probation and tenure	89
Employers and employed	93
Mobility	101
Mobility in perspective	101
Types of mobility, and their implications	103
Job satisfaction	105
Recognition and status: the public image of the scientific researcher	106
4. The scientific researcher as a professional	110
Emergence of a number of principles and norms relevant to the scientific researcher as a professional	110
Responsibilities inherent in the scientific researcher's work	112
The rights deriving from the researcher's responsibilities	116
Academic freedom as a specific aspect of the scientific researcher's rights	118
The need for professional recognition	120
Professionalism, pride and the poet's reminder	125
5. The scientific researcher as a citizen	126
A new upsurge of concern, and some perennial preoccupations	126
Earlier approaches and attitudes	128
Some current ethical and social problems encountered by scientists	131
Is science neutral?	131
Biomedical research	135
Genetic engineering and biotechnology	142

Attempts to suppress scientific expression	144
Opposition arising from conflict with religious and social views	144
Opposition arising from conflict with industrial and political interests	147
Scientific researchers and national policy-making	148

6. *The scientific researcher and the future* 150

Science as a determinant of progress and intellectual freedom	150
Scientific research in the construction of world equity and peace	157

Appendices

A. Certain codes and standards	163
B. Some precedents and points of reference	189
C. Scientific researchers and human rights	211
