

Chapter 1 Introduction to Operations Research

1.1	The Origins and Applications of Operations Research.....	1
1.2	System Modeling Principles	3
1.3	Algorithm Efficiency and Problem Complexity.....	4
1.4	Optimality and Practicality	8
1.5	Guide to Software Tools	9
1.6	Summary	13
	Key Terms	13
	References	14

Chapter 2 Linear Programming

2.1	The Linear Programming Model.....	18
2.2	The Art of Problem Formulation.....	18
2.3	Graphical Solution of Linear Programming Problems	24
2.3.1	General Definitions	24
2.3.2	Graphical Solutions.....	25
2.3.3	Multiple Optimal Solutions	27
2.3.4	No Optimal Solution.....	28
2.3.5	No Feasible Solution.....	28
2.3.6	General Solution Method.....	30
2.4	Preparation for the Simplex Method	30
2.4.1	Standard Form of a Linear Programming Problem	30
2.4.2	Solutions of Linear Systems.....	32
2.5	The Simplex Method	32
2.6	Initial Solutions for General Constraints.....	38
2.6.1	Artificial Variables.....	38
2.6.2	The Two-Phase Method	40
2.7	Information in the Tableau.....	42
2.7.1	Multiple Optimal Solutions	42
2.7.2	Unbounded Solution (No Optimal Solution)	43
2.7.3	Degenerate Solutions	45
2.7.4	Analyzing the Optimal Tableau: Shadow Prices.....	46
2.8	Duality and Sensitivity Analysis.....	47
2.8.1	The Dual Problem.....	48
2.8.2	Postoptimality and Sensitivity Analysis	52
2.9	Revised Simplex and Computational Efficiency	54
2.10	Guide to Software Tools	55
2.10.1	Extensions to General Simplex Methods	55
2.10.2	Interior Methods.....	57
2.10.3	Input/Output Formats	59
2.10.4	Solving Problems with Commercial Software	60
2.11	Illustrative Applications	64
2.11.1	Forest Pest Aerial Spray Program	64
2.11.2	Aircraft and Munitions Procurement.....	64

2.11.3 Grape Processing: Materials Planning and Production.....	65
2.12 Summary	66
Key Terms	67
Exercises.....	68
References	75

Chapter 3 Network Analysis

3.1 Graphs and Networks: Preliminary Definitions	80
3.2 Maximum Flow in Networks.....	82
3.2.1 Maximum Flow Algorithm	83
3.2.2 Extensions to the Maximum Flow Problem.....	85
3.3 Minimum Cost Network Flow Problems	86
3.3.1 Transportation Problem.....	87
3.3.2 Assignment Problem and Stable Matching	97
3.3.3 Capacitated Transshipment Problem	102
3.4 Network Connectivity	103
3.4.1 Minimum Spanning Trees.....	103
3.4.2 Shortest Network Problem: A Variation on Minimum Spanning Trees	105
3.5 Shortest Path Problems	106
3.5.1 Shortest Path Through an Acyclic Network.....	107
3.5.2 Shortest Paths from Source to All Other Nodes	108
3.5.3 Problems Solvable with Shortest Path Methods	110
3.6 Dynamic Programming.....	111
3.6.1 Labeling Method for Multi-Stage Decision Making.....	112
3.6.2 Tabular Method	113
3.6.3 General Recursive Method	116
3.7 Project Management	118
3.7.1 Project Networks and Critical Paths.....	119
3.7.2 Cost vs. Time Trade-offs	123
3.7.3 Probabilistic Project Scheduling.....	125
3.8 Guide to Software Tools	126
3.9 Illustrative Applications	127
3.9.1 DNA Sequence Comparison: An Application of the Shortest Path Algorithm.....	127
3.9.2 Multiprocessor Network Traffic Scheduling	128
3.9.3 Shipping Cotton from Farms to Gins.....	128
3.10 Summary	129
Key Terms	129
Exercises.....	131
References	137

Chapter 4 Integer Programming

4.1 Fundamental Concepts.....	142
4.2 Typical Integer Programming Problems.....	143
4.2.1 General Integer Problems	143
4.2.2 Zero-One Problems	144
4.2.3 Mixed Integer Problems.....	145
4.3 Zero-One Model Formulations	145
4.3.1 Traveling Salesman Model	145
4.3.2 Knapsack Model	146
4.3.3 Bin Packing Model	147

4.3.4	Set Partitioning/Covering/Packing Models.....	147
4.3.5	Generalized Assignment Model.....	148
4.4	Branch-and-Bound	149
4.4.1	A Simple Example	149
4.4.2	A Basic Branch-and-Bound Algorithm	153
4.4.3	Knapsack Example.....	153
4.4.4	From Basic Method to Commercial Code	154
4.4.4.1	Branching Strategies	155
4.4.4.2	Bounding Strategies	157
4.4.4.3	Separation Rules	158
4.4.4.4	The Impact of Model Formulation	158
4.4.4.5	Representation of Real Numbers.....	160
4.5	Cutting Planes and Facets.....	160
4.6	Cover Inequalities	163
4.7	Lagrangian Relaxation	168
4.7.1	Relaxing Integer Programming Constraints	168
4.7.2	A Simple Example	170
4.7.3	The Integrality Gap.....	173
4.7.4	The Generalized Assignment Problem	173
4.7.5	A Basic Lagrangian Relaxation Algorithm	175
4.7.6	A Customer Allocation Problem	175
4.8	Column Generation	178
4.9	Guide to Software Tools	181
4.10	Illustrative Applications	182
4.10.1	Solid Waste Management	182
4.10.2	Timber Harvest Planning	184
4.10.3	Propane Bottling Plants	185
4.11	Summary	186
	Key Terms	186
	Exercises.....	187
	References	192

Chapter 5 Nonlinear Optimization

5.1	Preliminary Notation and Concepts.....	196
5.2	Unconstrained Optimization	200
5.2.1	One-Dimensional Search	201
5.2.2	Multi-variable Search: Gradient Method.....	202
5.2.3	Newton's Method	205
5.2.4	Quasi-Newton Methods	206
5.3	Constrained Optimization	206
5.3.1	Lagrange Multipliers (Equality Constraints).....	206
5.3.2	Kuhn-Tucker Conditions (Inequality Constraints)	207
5.3.3	Quadratic Programming	208
5.3.4	More Advanced Methods.....	211
5.4	Guide to Software Tools	212
5.5	Illustrative Applications	215
5.5.1	Gasoline Blending Systems	215
5.5.2	Portfolio Construction.....	216
5.5.3	Balancing Rotor Systems.....	217
5.6	Summary	217

Key Terms	218
Exercises.....	219
References	221
 Chapter 6 Markov Processes	
6.1 State Transitions.....	224
6.2 State Probabilities	228
6.3 First Passage Probabilities	232
6.4 Properties of the States in a Markov Process	234
6.5 Steady-State Analysis.....	236
6.6 Expected First Passage Times.....	238
6.7 Absorbing Chains.....	240
6.8 Guide to Software Tools	243
6.9 Illustrative Applications	244
6.9.1 Water Reservoir Operations	244
6.9.2 Markov Analysis of Dynamic Memory Allocation.....	245
6.9.3 Markov Models for Manufacturing Production Capability	246
6.9.4 The Independent Reference Model of Virtual Memory Systems	246
6.10 Summary	247
Key Terms	247
Exercises.....	248
References	252
 Chapter 7 Queuing Models	
7.1 Basic Elements of Queuing Systems.....	256
7.2 Arrival and Service Patterns	258
7.2.1 The Exponential Distribution.....	258
7.2.2 Birth-and-Death Processes	260
7.3 Analysis of Simple Queuing Systems	260
7.3.1 Notation and Definitions.....	260
7.3.2 Steady-State Performance Measures	262
7.3.3 Practical Limits of Queuing Models	267
7.4 Guide to Software Tools	268
7.5 Illustrative Applications	269
7.5.1 Queuing Analysis for Interactive Computer Systems	269
7.5.2 Queuing-based Models for Manufacturing.....	270
7.6 Summary	271
Key Terms	272
Exercises.....	272
References	274
 Chapter 8 Simulation	
8.1 Simulation: Purposes and Applications	275
8.2 Discrete Simulation Models	277
8.2.1 Event-Driven Models	278
8.2.2 Generating Random Events	281
8.3 Observations of Simulations.....	284
8.3.1 Gathering Statistics	284
8.3.2 Design of Simulation Experiments.....	287
8.4 Guide to Software Tools	288

8.5	Illustrative Applications	292
8.5.1	Simulation of a Semiconductor Manufacturing Process.....	292
8.5.2	Object-Oriented Simulation of Eurotunnel Terminals	294
8.6	Summary	295
	Key Terms	295
	Exercises.....	296
	References	298

Chapter 9 Decision Analysis

9.1	The Decision-Making Process.....	301
9.2	An Introduction to Game Theory	305
9.2.1	Maximin Strategy.....	305
9.2.2	Maximax Strategy	305
9.2.3	Laplace Principle (Principle of Insufficient Reason)	306
9.2.4	Hurwicz Principle	306
9.2.5	Savage Minimax Regret.....	307
9.3	Decision Trees.....	309
9.4	Utility Theory.....	316
9.4.1	The Axioms of Utility Theory	317
9.4.2	Utility Functions	319
9.4.3	The Shape of the Utility Curve	323
9.5	The Psychology of Decision-Making.....	327
9.5.1	Misconceptions of Probability	327
9.5.2	Availability	328
9.5.3	Anchoring and Adjustment	328
9.5.4	Dissonance Reduction.....	329
9.5.5	The Framing Effect	330
9.5.6	The Sunk-cost Fallacy.....	332
9.5.7	Irrational Human Behavior	333
9.6	Guide to Software Tools	334
9.7	Illustrative Applications	335
9.7.1	Refinery Pricing Under Uncertainty.....	335
9.7.2	Decisions for Radioactive Waste Management.....	336
9.7.3	Investment Decisions and Risk in Petroleum Exploration.....	337
9.8	Summary	338
	Key Terms	339
	Exercises.....	340
	References	344

Chapter 10 Heuristic Techniques for Optimization

10.1	Local Improvement Heuristics.....	349
10.2	Optimization by Simulated Annealing	350
10.3	Parallel Annealing	355
10.4	Genetic Algorithms	357
10.5	Neural Networks	359
10.6	Guide to Software Tools	361
10.7	Illustrative Applications	363
10.7.1	FedEx Flight Management Using Simulated Annealing.....	363
10.7.2	Ecosystem Management Using Genetic Algorithm Heuristics.....	365
10.7.3	Scheduling Oil Field Drilling Rigs Using Simulated Annealing.....	366

10.8 Summary	367
Key Terms	368
Exercises.....	368
References	371

Appendix: Review of Essential Mathematics

A.1 Vectors.....	375
A.2 Matrices and Matrix Operations	376
A.3 Linear Equations	378
A.4 Quadratic Forms.....	379
References	379
