

Contents

Preface	7
1. Introduction	9
2. Folded Plate Theory and its Application in the Design of Plated Structures	11
2.1 Simply Supported Folded Plate Structures with Support Diaphragms	12
2.2 Folded Plates with Deformable End Cross-Sections	39
2.3 Folded Plates with Diaphragms Restraining Free Cross-Sectional Warping	50
2.4 Folded Plate Structures with Various End Conditions	57
2.5 Folded Plate Structures on an Elastic Foundation	59
2.6 Statically Indeterminate Continuous Folded Plate Structures with Interior Diaphragms	63
2.7 Analysis of Skew Structures	71
2.8 Folded Plate Analysis of Shear Wall Systems and Frame Structures	74
References	86
3. Shear Lag in Wide Flanges	87
3.1 Methods of Analysis	88
3.2 The Main Features of Shear Lag and the Influence of Various Parameters	115
3.3 Curved Box Girders	138
3.4 Initial Imperfections in the Shear Lag Behaviour of Wide Flanges	144
3.5 Box Girders Subjected to Torsion	156
3.6 Methods of Reducing Shear Lag Effects	160
References	165
4. Local Effects in Steel Plated Structures	166
4.1 Behaviour of Webs Subject to Partial Edge Loading	166
4.2 Stress State in Webs Subject to Partial Edge Loading	166
4.3 Buckling of Webs Subject to Partial Edge Loading	183
References	189
5. Buckling of Longitudinally Stiffened Flanges	190
5.1 Linear Buckling Theory Approach	190
5.2 Post-Buckled Behaviour	276
References	282

6. Interaction of Buckling with Shear Lag in Longitudinally Stiffened Compression Flanges	283
6.1 Linear Theory Approach	283
6.2 Non-Linear Theory Approach	286
References	328
Subject Index	329
