

# Contents

## PART 1

### 1. Basic Information

1. 1. Welcome to the world of modern chemistry at the Institute of Chemical Technology, Prague	5
1. 2. Foreword of the Rector	6
1. 3. The past and the present of the Institute of Chemical Technology, Prague	8
1. 4. Study programmes at the Institute of Chemical Technology, Prague	10
1. 5. Central Library	11
1. 6. ICT Press	13

## PART 2

### 2. Research at the Institute of Chemical Technology, Prague

2. 1. Foreword of the Vice-Rector for Science and Research and Vice-Rector for International Relations	16
2. 2. Presentation of major research topics <i>Faculty of Chemical Technology</i>	19
2. 2. 1. Chemistry and chemical technology of catalytic processes	19
2. 2. 2. Preparation and properties of advanced materials – modelling, characterization, technology <i>Faculty of Environmental Technology</i>	20
2. 2. 3. The study of chemical-technological processes for the environment protection and fuel processing <i>Faculty of Food and Biochemical Technology</i>	21
2. 2. 4. Improvement of food quality and assurance of optimal nutrition for population	22
2. 2. 5. Application of advanced process engineering in food technology for an improvement of raw material and waste utilisation	24
2. 2. 6. Biochemical, microbiological and molecular genetical studies creating the theoretical background of advanced biotechnology <i>Faculty of Chemical Engineering</i>	25
2. 2. 7. Reaction-transport chemical engineering systems and their dynamic behaviour, modelling and control of chemical and biotechnological processes	26

# Contents

2. 2. 8. Methods and means of chemical and physico-chemical analysis of properties and behaviour of bio-engineering and chemical engineering systems	28
2. 3. Examples of successful research projects	29
2. 3. 1. Perfumery and flavour synthetics	29
2. 3. 2. Model of the industrial glass melting process and method of data acquisition	38
2. 3. 3. Development of the ternary high-copper amalgam	42
2. 3. 4. Technology for monument conservation	47
2. 3. 5. Digital signal and image processing	55
2. 3. 6. Electro-membrane enzyme reactors (EMERs)	65
2. 3. 7. Test facility for commercial measurement of transport characteristics of packings for absorption and distillation columns	71
2. 3. 8. Improved deicers for aviation	77
2. 3. 9. Metallurgical processing of metal-bearing wastes and deep-sea nodules	81
2. 3. 10. Technology of concentrated NO	87
2. 3. 11. Silicone facade strips for prefabbed building reconstructions	91
2. 3. 12. Pyrolysis gas chromatography for the evaluation of thermal cracking feedstocks	94
2. 3. 13. Synthetic hydrotalcite	101
2. 3. 14. Ion-selective electrodes development and their automatic testing	107
2. 3. 15. New technology for ammonia removal from waste air	113
2. 3. 16. Physico-chemical property databases	117

## PART 3

### 3. Index

3. 1. Recent patents overview	123
3. 2. Licence agreements, agreements on know-how and on patent co-ownership	125
3. 3. Central Laboratories	126
3. 4. International cooperation with foreign universities	133
3. 5. Organizational structure of the Institute of Chemical Technology, Prague	139
3. 6. Contacts	140
