

Contents

1	Introduction	4
2	Telecommunication services and networks	5
2.1	Basic telecommunication terminology	5
2.2	Transport of audio signal	8
2.3	Transport of video signal	9
2.4	Transport of text	10
2.5	Transport of data	11
2.6	Telecommunication services and demands on telecommunication network	11
2.7	Quality of service	12
2.8	Structure of telecommunication network	14
2.9	Development and types of networks	16
3	Methods of transmission and communication	18
3.1	Methods of multiplexing	18
3.2	Communication modes	18
3.3	Model OSI	20
3.4	Transmission of data	22
4	Transmission of digital signals	29
4.1	Reliable digital signal transmission	30
4.2	Error detection and error correction	32
4.3	Line codes and modulation	40
4.4	Signal compensation	46
4.5	Information throughput of channel	48
5	Digitalization of telephone signal and switching systems	53
5.1	Pulse code modulation	53
5.2	PCM signal (E1)	55
5.3	Compression of telephone signal	57
5.4	Evaluation of quality of telephone signal	59
5.5	Principle of analogue telephone loop	60
5.6	The principle of digital telephone exchange	62
5.7	Signalling	72
5.8	Intelligent network, networks of new generation	75
5.9	IDN, ISDN network	78
5.10	B-ISDN and ATM networks	80
6	Digital hierarchy for multiplexing of signals	85
6.1	Plesiochronous digital hierarchy	85
6.2	Synchronous digital hierarchy	86
6.3	Optical transport hierarchy	89
6.4	Trends in backbone transport networks	90
7	Access network	92
7.1	Use of metallic lines	92
7.2	Telephone modems	96
7.3	Access xDSL technology	98
7.4	Systems CATV	102
7.5	Use of power lines	104
7.6	Optical systems	105
7.7	Optical point-to-point connections	109
7.8	Radio transmission paths	110
7.9	Radio-relay connections	112
7.10	Broadband radio access systems	115
8	Mobile networks	118
8.1	Cell mobile telephone network	118
8.2	GSM mobile networks	121
8.3	Mobile systems of the 2.5 generation	125
8.4	Mobile systems of 3 rd generation	126
