1.	THE BACKGROUND	7	9.	ABNORMALITIES IN ROEBUCK ANTLERS AND REASONS FOR THIS	119
2.	THE REPRODUCTION OF ROE DEER	11	9.1.	Hormonal disturbances	120
3.	NEGATIVE FACTORS AFFECTING THE HEALTH OF ROE DEER	27	9.1.1.	Double beams	120
3.1.	Parasitoses	30	9.1.2.	Roe deer does with pedicles and antlers	120
3.1.1.	Bots and Warbles	30	9.1.3.	Perruque bucks	122
3.1.2.	External parasites	33	9.2.	Changes in shape resulting from mechanical injuries	132
3.2.	Unsuitable nourishment	34	9.2.1.	Injuries to the pedicles	132
3.3.	Loss of energy	40	9.2.2.	Injuries to antlers during the period of growth	138
4.	THE PHENOMENON OF ANTLER FORMATION	43	9.2.3.	Damage to the hard antlers	142
4.1.	The developmental cycle of antlers	56	9.2.4.	The impact of bone injuries	142
4.2.	Hormonal control of antler growth	68	9.3.	Damage to the antlers by abiotic factors	144
5.	CLASSES AND SHAPES OF ROEBUCK ANTLERS	71	9.4.	The impact of metabolic disorders	144
5.1.	Classes of roe buck antlers	72	9.5.	The occurrence of multiple antlers	146
5.2.	The shape of roebuck antlers	82	10.	ASSESSING THE AGE OF ROE DEER BEFORE AND AFTER SHOOTING	151
6.	THE REASONS FOR CROOKED ANTLER FORMATION	87	10.1.	Assessing the age of living deer	152
7.	THE SPECIFIC WEIGHT AND DENSITY OF ANTLERS	99	10.1.1.	Colour of the face mask in roebucks	152
8.	THE INFLUENCE OF NUTRITION ON THE DEVELOPMENT OF ANTLERS	109	10.1.2.	The strength of the neck and the physique	156
8.1.	Highly nutritious and well-balanced nutrition and the development of antlers	110	10.1.3.	Changes in colour	158
8.2.	Discoveries from feeding deer in captivity	114	10.1.4.	The antlers	162
			10.1.5.	The behaviour of roebucks	166
			10.1.6.	The does	168
			10.2.	Estimating the age of deer once dead	172
			10.2.1.	Tooth wear and abrasion	172
			10.2.2.	The development of teeth	174
			10.2.3.	The fusing of the cartilaginous sphenoid joints	182
			10.2.4.	Further methods to help assess the age of roe deer	184
			10.2.5.	Laboratory assessment of age	188
