1 Fundamentals

What do chemists do?

1.1	Chemistry: the central science	4
Box 1.1	The hundred thousand genome project	5
1.2	Measurement, units, and nomenclature	6
1.3	Atoms and the mole	12
Box 1.2	Mass spectrometry	14
Box 1.3	The Amesbury Archer	17
1.4	Chemical equations	21
Box 1.4	Atom efficiency and green chemistry	25
1.5	Working out how much you have	34
Box 1.5	Measuring low concentrations: parts per million	34
Box 1.6	Measuring dissolved oxygen in river water	38
1.6	Energy changes in chemical reactions	41
Box 1.7	Potential energy and kinetic energy	42
Box 1.8	Enthalpy and internal energy	43
Box 1.9	Butane hair stylers	45
1.7	States of matter and phase changes	47
Box 1.10	Phase changes of water	50
1.8	Non-covalent interactions	52
Box 1.11	Why is Kevlar® so strong?	55
1.9	Chemical equilibrium: how far has a reaction gone?	56
Box 1.12	Connecting equilibria and cave chemistry	58
	Concept review	65
	Key equations	65
	Questions	66

2 The language of organic chemistry

68

Designer medicines for treating high blood pressure: an ACE approach

2.1	Why are organic compounds important?	70
Box 2.1	Friedrich Wöhler: first synthesis of a naturally occurring organic compound	71
Box 2.2	Some landmark laboratory syntheses of natural products	72
2.2	Drawing organic compounds	73
2.3	Carbon frameworks and functional groups	77
2.4	Naming organic compounds	79
2.5	Hydrocarbons	79
Box 2.3	Alkyl group substituents	81
Box 2.4	Is butter healthier than margarine?	86
2.6	Functional groups containing one or more heteroatoms	90
Box 2.5	The DDT dilemma	91
Box 2.6	An organic work-up	94
Box 2.7	Pain-killing alkaloids	97
2.7	Functional groups containing carbonyl groups	98
Box 2.8	Sulfonic acids and related compounds	101
Box 2.9	An artificial sweetener	104
2.8	Naming compounds with more than one functional group	106
	Concept review	108
	Questions	109

3 Atomic structure and properties

112

Imaging atoms

3.1	The classical picture of the atom	114
3.2	Electromagnetic radiation and quantization	117
Box 3.1	Radiation from the Sun	120
3.3	Atomic spectra and the Bohr atom	124
Box 3.2	Lighting up the sky	128
Box 3.3	The composition of stars	131
3.4	The nature of the electron	132
3.5	Wavefunctions and atomic orbitals	134
Box 3.4	The <i>p</i> orbitals and complex numbers	141
Box 3.5	The shapes of the <i>d</i> orbitals	142

3.6	Many-electron atoms	143	5.4	Valence bond theory for polyatomic molecules	236
	Box 3.6 Electron spin resonance spectroscopy	145		Box 5.5 Ethene and the ripening of fruit	240
	Box 3.7 Exchange energy	147	5.5	Resonance	243
	Box 3.8 Atomic numbers and the Periodic Table	149	5.6	A molecular orbital approach to the bonding in polyatomic molecules	246
3.7	Atomic properties and periodicity	153	5.7	Partial molecular orbital schemes	249
3.8	Nuclear chemistry	159		Box 5.6 Boron hydrides	252
	Box 3.9 Dating the past	161		Concept review	252
	Box 3.10 Smoke detectors	163		Questions	253
	Concept review	164			
	Key equations	165			
	Questions	165			

4 Diatomic molecules

168

Molecules in space

4.1	Features of diatomic molecules	170
	Box 4.1 How can we measure bond lengths?	172
4.2	The Lewis model	173
	Box 4.2 Magnetic behaviour	176
4.3	Electronegativity	177
4.4	Valence bond theory and molecular orbital theory	178
4.5	Valence bond theory	179
	Box 4.3 Molecular wavefunctions for H_2	180
	Box 4.4 Making an unreactive molecule react	182
4.6	Molecular orbital theory	184
4.7	Molecular orbitals in hydrogen (H_2)	184
	Box 4.5 Linear combinations of atomic orbitals	188
4.8	Molecular orbital energy level diagrams	188
	Box 4.6 The formation of hydrogen molecules in space	190
4.9	Linear combinations of p orbitals	193
4.10	Bonding in fluorine (F_2) and oxygen (O_2)	196
	Box 4.7 Oxygen in the atmosphere	198
4.11	s - p mixing	200
	Box 4.8 Measuring the energies of molecular orbitals	200
	Box 4.9 The colours of the polar lights	203
4.12	Heteronuclear diatomics	205
	Box 4.10 Linear combinations of atomic orbitals in LiH	207
	Box 4.11 Using nitrogen monoxide to send biological signals	212
	Concept review	213
	Key equations	213
	Questions	213

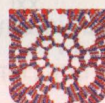

5 Polyatomic molecules

216

Xenon compounds

	Box 5.1 Representing structures	218
5.1	The Lewis model	219
	Box 5.2 N_2O : from laughing gas to dragsters	221
5.2	Valence shell electron pair repulsion theory	223
	Box 5.3 The fluorinating ability of ClF_3 and BrF_3	229
	Box 5.4 Nitrates in water	232
5.3	Bond polarity and polar molecules	235

6 Solids

254

Zeolites

6.1	Covalent network structures	257
	Box 6.1 Graphene, nanotubes, and nanotechnology	258
	Box 6.2 Superconductors	261
6.2	Structures based on the packing of spheres	262
6.3	Metallic bonding	273
	Box 6.3 CD writers and rewriters	275
6.4	Structures of compounds	277
	Box 6.4 X-ray crystallography	279
	Box 6.5 Self-cleaning windows	283
6.5	The ionic model	286
6.6	Calculating lattice energy	293
	Box 6.6 Determining the Madelung constant	294
6.7	Predicting bond types	298
	Concept review	300
	Key equations	300
	Questions	300

7 Acids and bases

302

Acids and bases in the garden

7.1	Brønsted-Lowry acids and bases	304
	Box 7.1 Solvation	305
	Box 7.2 Acids, alkalis, and human tissue	307
7.2	The strengths of acids and bases	308
	Box 7.3 Acidic water in disused mines	312
	Box 7.4 Controlling pH in a swimming pool	317
7.3	Buffer solutions	319
	Box 7.5 Buffering in the blood	321
7.4	pH changes in acid-base titrations	322
7.5	Indicators	327
7.6	Oxoacids	330
7.7	Acidic and basic oxides	334
	Box 7.6 Cooking with acids and bases	334
7.8	Lewis acids and bases	336
	Box 7.7 Superacids	337
	Concept review	338
	Key equations	339
	Questions	339

8 Gases

342

Breathing under water

- 8.1 The gas laws: an empirical approach 345
- 8.2 Using the ideal gas equation 349
 - Box 8.1 Car air bags 353
- 8.3 Mixtures of gases 355
- 8.4 Kinetic molecular theory and the gas laws 358
 - Box 8.2 Calculating the pressure of a gas from the kinetic theory 360
- 8.5 The speeds of molecules in a gas 362
 - Box 8.3 Measuring the distribution of speeds in a gas 364
 - Box 8.4 Enriching uranium: a practical application of effusion 367
- 8.6 Real gases 372
 - Concept review 378
 - Key equations 378
 - Questions 378

9 Reaction kinetics

382

Methane in the troposphere

- 9.1 Why study reaction kinetics? 384
- 9.2 What is meant by the rate of a reaction? 384
- 9.3 Monitoring the progress of a reaction 388
- 9.4 Elementary reactions 389
 - Box 9.1 Deriving the integrated rate equation for a first order reaction 393
 - Box 9.2 Deriving the integrated rate equation for a second order reaction 394
 - Box 9.3 Atmospheric lifetime of methane 400
 - Box 9.4 Using flash photolysis to monitor ClO^\bullet radicals 403
- 9.5 Complex reactions: experimental methods 405
 - Box 9.5 The stopped-flow technique 406
 - Box 9.6 Deriving the integrated rate equation for a zero order reaction 412
 - Box 9.7 Pharmacokinetics 412
- 9.6 Complex reactions: reaction mechanisms 416
- 9.7 Effect of temperature on the rate of a reaction 425
- 9.8 Theories of reactions 432
- 9.9 Catalysis 437
 - Box 9.8 The Michaelis–Menten mechanism 440
 - Concept review 442
 - Key equations 442
 - Questions 443

10 Molecular spectroscopy

448

Searching for life on Mars

- 10.1 Introduction to molecular spectroscopy 450
- 10.2 Molecular energies and spectroscopy 453
 - Box 10.1 Particle in a one-dimensional box 454

- 10.3 General principles of spectroscopy 458
 - Box 10.2 Lasers 464
- 10.4 Rotational spectroscopy 466
 - Box 10.3 Using rotational spectroscopy to monitor ClO^\bullet radicals in the atmosphere 474
- 10.5 Vibrational spectroscopy 476
 - Box 10.4 The simple harmonic oscillator model for a diatomic molecule 479
 - Box 10.5 Atmospheric concentrations of carbon dioxide 485
 - Box 10.6 Degrees of freedom and normal modes of vibration 486
- 10.6 Electronic spectroscopy 491
 - Box 10.7 Electronic spectroscopy and colour 491
- 10.7 Spin resonance spectroscopy 496
 - Box 10.8 Spin-spin coupling in NMR spectra 503
 - Box 10.9 Magnetic resonance imaging (MRI) 507
 - Concept review 509
 - Key equations 510
 - Questions 510

11 Analytical chemistry

512

Drugs, sport, and analytical chemistry

- 11.1 Carrying out an analysis 515
 - Box 11.1 Analysing food contaminants 522
- 11.2 Electrochemical methods of analysis 523
 - Box 11.2 Rapid blood analysis using electrochemical methods 526
- 11.3 Chromatography 528
 - Box 11.3 Monitoring PCBs in the environment 537
 - Box 11.4 Gas chromatography-mass spectrometry (GC-MS) 538
 - Box 11.5 Chiral HPLC 541
- 11.4 Spectroscopic methods of analysis 542
 - Box 11.6 Alcohol analysis and drink-driving 542
 - Box 11.7 A pulse oximeter 546
- 11.5 Atomic spectrometry 547
 - Box 11.8 Why is the temperature so important in atomic emission spectrometry? 547
 - Concept review 553
 - Key equations 553
 - Questions 553

12 Molecular characterization

556

Using isotope ratios to analyse orange juice

- 12.1 Mass spectrometry 558
 - Box 12.1 Ionization methods 560
 - Box 12.2 Using tandem mass spectrometry in newborn screening 568
- 12.2 Infrared spectroscopy 570
- 12.3 Nuclear magnetic resonance spectroscopy 578
 - Box 12.3 Running an NMR spectrum 579

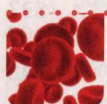

Box 12.4	Magnetic field strength and resolution	580
Box 12.5	Drawing a ^1H NMR spectrum	594
12.4	Structure determination using a combination of techniques	599
Box 12.6	Determining degrees of unsaturation	600
	Concept review	605
	Questions	606

13 Energy and thermochemistry 610

Launching the Space Shuttle

13.1	Energy changes in chemistry: heat and work	612
Box 13.1	James Joule and the equivalence of heat and work	613
13.2	Enthalpy and enthalpy changes	619
Box 13.2	Which freezes first, hot water or cold?	621
13.3	Enthalpy changes in chemical reactions	622
Box 13.3	Comparing fuels	628
Box 13.4	Thermochemistry for faster food	629
13.4	Variation of enthalpy with temperature	633
Box 13.5	Deriving the Kirchhoff equation	635
13.5	Internal energy and the First Law of thermodynamics	636
Box 13.6	Isothermal expansion of an ideal gas	638
Box 13.7	Nitroglycerine: the chemistry of an explosive	643
13.6	Measuring energy changes	644
Box 13.8	Calorimetry, food, and metabolism	648
	Concept review	650
	Key equations	650
	Questions	651

14 Entropy and Gibbs energy 654

Protein folding

14.1	What are spontaneous processes?	656
14.2	Entropy and the Second Law of thermodynamics	660
Box 14.1	Variation of the entropy of a substance with temperature	663
14.3	The Third Law and absolute entropies	664
Box 14.2	Determination of standard entropy, S_{298}^\ominus	665
Box 14.3	What is the lowest temperature that can be reached?	668
14.4	Entropy changes in chemical reactions	669
Box 14.4	What happens when proteins don't fold correctly?	673
14.5	Gibbs energy	675
Box 14.5	Gibbs energy: the balance between enthalpy change and entropy change	677
Box 14.6	Thermodynamics of addition polymerization	679
Box 14.7	Obtaining silicon for use in silicon chips	682
Box 14.8	Energetics of biochemical reactions	683
Box 14.9	How much work can you get from glucose?	685
14.6	Variation of Gibbs energy with conditions	686
Box 14.10	Obtaining metals from ores	689
	Concept review	691

Key equations	691
Questions	692

15 Chemical equilibrium 694

Equilibria in the oceans

15.1	Gibbs energy and equilibrium	697
Box 15.1	Solubility equilibria	701
15.2	The direction of a reaction: the reaction quotient	702
Box 15.2	Equilibrium in fizzy water	704
15.3	Gibbs energy and equilibrium constants	705
Box 15.3	Deriving the relationship between $\Delta_r G^\ominus$ and K	706
Box 15.4	Contrails from jet aircraft	707
15.4	Calculating the composition of a reaction at equilibrium	710
Box 15.5	Chalk, lime, and mineral water: an example of heterogeneous equilibrium	713
15.5	Effect of conditions on reaction yields and K	713
15.6	Applying the thermodynamics in Chapters 13, 14, and 15	719
Box 15.6	A case study in reaction thermodynamics: the Haber process	720
	Concept review	721
	Key equations	721
	Questions	721

16 Electrochemistry 726

Electrical energy on the move

16.1	What is electrochemistry?	728
16.2	Ions in solution	730
Box 16.1	Ultrapure water and conductivity	733
16.3	Electrochemical cells	735
Box 16.2	Electrochemical cells as portable energy sources	737
Box 16.3	Practical measurement of E^\ominus values	745
16.4	Thermodynamics of electrochemical cells	746
Box 16.4	Corrosion as an electrochemical process	751
Box 16.5	Bioelectrochemistry: nerve cells and ion channels	754
16.5	Electrolysis	755
Box 16.6	Electrolysis and rechargeable batteries	759
	Concept review	761
	Key equations	761
	Questions	761

17 Phase equilibrium and solutions 764

Supercritical fluids

17.1	Phase behaviour of single components	766
Box 17.1	Liquid crystals	773
17.2	Quantitative treatment of phase transitions	775
Box 17.2	Deriving the Clapeyron equation	777
Box 17.3	Deriving the Clausius-Clapeyron equation	780

17.3	Intermolecular interactions	783
17.4	Phase behaviour in two-component systems	789
	Box 17.4 Perfluorocarbons and blood substitutes	800
	Box 17.5 Reverse osmosis and water purification	804
	Concept review	809
	Key equations	809
	Questions	810

18 Isomerism and stereochemistry 814

Bitter isomers in beer

18.1	Isomerism	816
18.2	Conformational isomers	819
	Box 18.1 Shaping up for maximum activity	822
	Box 18.2 Drawing cyclohexane rings	828
	Box 18.3 The shape of cholesterol and its role in the body	830
18.3	Configurational isomers: E- and Z-isomers	833
	Box 18.4 A natural selection: biosynthesis of fatty acids	836
18.4	Configurational isomers: isomers with chiral centres	838
	Box 18.5 Some landmarks in chirality	839
	Box 18.6 The D/L nomenclature	842
	Box 18.7 Thalidomide—from villain to hero?	848
	Box 18.8 Using diastereomers to separate enantiomers: resolution	850
	Concept review	858
	Questions	858

19 Organic reaction mechanisms 860

Antidotes for nerve agents

	Box 19.1 The birth of organic reaction mechanisms	863
19.1	Fundamental concepts of organic reaction mechanisms	863
	Box 19.2 Natural cascades	864
	Box 19.3 George Olah and carbocations	868
	Box 19.4 Anti-cancer agents	883
19.2	Classification of organic reaction mechanisms	888
	Box 19.5 Natural acids and bases	894
	Box 19.6 Natural acid-base catalysis	897
	Box 19.7 Aspirin	900
	Box 19.8 Superglue and fingerprints	904
19.3	Reaction selectivity	909
	Concept review	913
	Questions	914

20 Halogenoalkanes: substitution and elimination reactions 916

Alternative pesticides to bromomethane

	Box 20.1 Natural organohalogens	918
20.1	Structure and reactivity of halogenoalkanes	919

20.2	Preparation of halogenoalkanes	921
	Box 20.2 Teflon and radical polymerization	923
20.3	The mechanisms of nucleophilic substitution reactions	930
	Box 20.3 Designer solvents	932
	Box 20.4 Epoxy resins	940
20.4	The mechanisms of elimination reactions	943
	Box 20.5 Muscle relaxants	947
20.5	Substitution versus elimination reactions	953
	Concept review	957
	Questions	957

21 Alkenes and alkynes: electrophilic addition and pericyclic reactions 960

The citric acid cycle

21.1	Structure and reactivity of alkenes and alkynes	962
	Box 21.1 Ethene production in plants	965
21.2	Preparation of alkenes and alkynes	967
21.3	Electrophilic addition reactions of alkenes	970
	Box 21.2 Adding HBr to alkenes in the presence of peroxides	973
	Box 21.3 Making ethanol on a large scale	980
	Box 21.4 Why is benzene carcinogenic?	988
21.4	Pericyclic reactions of alkenes	989
21.5	Electrophilic addition reactions of alkynes	994
	Concept review	998
	Questions	999

22 Benzene and other aromatic compounds: electrophilic substitution reactions 1002

Azo dyes: the start of the rainbow

22.1	The structure of benzene and other aromatic compounds	1004
	Box 22.1 A short history of benzene	1006
	Box 22.2 Making phenol from benzene	1007
	Box 22.3 From coal tar dyes to pharmaceuticals	1011
22.2	Electrophilic substitution reactions of benzene	1013
	Box 22.4 Substituted benzenes in sport	1021
	Box 22.5 Cleaning up the Friedel-Crafts acylation	1025
22.3	Reactivity of substituted benzenes in electrophilic substitutions	1027
22.4	The synthesis of substituted benzenes	1036
	Box 22.6 The biological action and synthesis of Viagra	1039
	Box 22.7 Retrosynthesis—working backwards to go forwards	1046
	Box 22.8 The synthesis and biological action of salbutamol	1049
	Concept review	1051
	Questions	1052

23 Aldehydes and ketones: nucleophilic addition and α -substitution reactions 1054

Rhodopsin and vision

- 23.1 The structure and reactions of aldehydes and ketones 1056
 - Box 23.1 Cortisone and cortisol 1060
- 23.2 Nucleophilic addition reactions of aldehydes and ketones 1061
 - Box 23.2 Oxidizing alcohols to carbonyls 1064
 - Box 23.3 Hydride transfer in nature 1066
 - Box 23.4 A short history of organometallics 1069
 - Box 23.5 The structure of glucose 1073
 - Box 23.6 Imines and hydrazones in organic synthesis 1079
- 23.3 α -Substitution reactions of aldehydes and ketones 1082
- 23.4 Carbonyl-carbonyl condensation reactions 1089
 - Concept review 1095
 - Questions 1095

24 Carboxylic acids and derivatives: nucleophilic acyl substitution and α -substitution reactions 1098

PET plastics

- 24.1 Structure and reactions of carboxylic acids and derivatives 1100
 - Box 24.1 Oxytocin, the hormone of love 1100
 - Box 24.2 Relative reactivity of carboxylic acid derivatives 1103
- 24.2 Nucleophilic acyl substitution reactions 1107
 - Box 24.3 Fragrant esters 1109
 - Box 24.4 Halogenation of carboxylic acids 1110
 - Box 24.5 Combinatorial chemistry 1115
 - Box 24.6 Making soap 1120
 - Box 24.7 Hydrolysis of nitriles to form carboxylic acids 1125
- 24.3 α -Substitution and carbonyl-carbonyl condensation reactions 1126
 - Concept review 1134
 - Questions 1134

25 Hydrogen 1138

The planet Jupiter

- 25.1 Elemental hydrogen 1140
 - Box 25.1 The hydrogen economy 1141
- 25.2 Compounds of hydrogen 1143
 - Box 25.2 Periodicity 1145
 - Box 25.3 Hydrogen storage 1147
 - Box 25.4 Hydrofluoric acid 1154
- 25.3 Hydrogen bonding 1156
 - Box 25.5 Hydrogen bonding and life 1158
 - Box 25.6 Burning ice 1161

- 25.4 Isotope effects 1162
 - Box 25.7 Tritium 1162
 - Concept review 1165
 - Key equations 1165
 - Questions 1165

26 s-Block chemistry 1168

Biominerals

- 26.1 The Group 1 elements 1170
- 26.2 Group 1 compounds 1172
 - Box 26.1 Why is sodium peroxide more stable to heating than lithium peroxide? 1174
 - Box 26.2 Is salt bad for you? 1177
- 26.3 Group 1 ions in solution 1180
- 26.4 Group 1 coordination chemistry 1181
- 26.5 Reaction of Group 1 metals with liquid ammonia 1182
- 26.6 The Group 2 elements 1183
 - Box 26.3 Building materials 1185
- 26.7 Group 2 compounds 1186
 - Box 26.4 Hard water 1191
- 26.8 Group 2 coordination chemistry 1192
 - Box 26.5 Chlorophylls 1192
- 26.9 Lithium and beryllium as exceptional elements 1194
- 26.10 Organometallic compounds 1195
- 26.11 Diagonal relationships 1196
 - Concept review 1197
 - Questions 1198

27 p-Block chemistry 1200

Photochemical smog

- 27.1 General aspects and trends in the p block 1203
- 27.2 Group 13: boron, aluminium, gallium, indium, and thallium 1209
 - Box 27.1 Recycling aluminium 1211
- 27.3 Group 14: carbon, silicon, germanium, tin, and lead 1216
 - Box 27.2 The greenhouse effect and global warming 1218
 - Box 27.3 Silicones—shiny hair and cosmetic surgery 1220
- 27.4 Group 15: nitrogen, phosphorus, arsenic, antimony, and bismuth 1223
 - Box 27.4 Fluxional molecules 1230
 - Box 27.5 Firearms and forensic science 1231
- 27.5 Group 16: oxygen, sulfur, selenium, tellurium, and polonium 1232
 - Box 27.6 The ozone layer 1233
 - Box 27.7 Sulfur on Io 1235
- 27.6 Group 17: fluorine, chlorine, bromine, iodine, and astatine 1240
 - Box 27.8 Chlorofluorocarbons and the ozone hole 1241
- 27.7 Group 18: helium, neon, argon, krypton, xenon, and radon 1248
 - Box 27.9 Using argon to date rocks 1249

28.5	Filling the <i>d</i> orbitals	1282		
28.6	Colour in coordination compounds	1289		
28.7	Magnetic properties	1292		
	Box 28.5 Ferromagnetism and recording information	1293		
28.8	Aqueous chemistry of the first row <i>d</i> -block ions	1295		
	Box 28.6 Trapping metal ions using the chelate effect	1296		
	Box 28.7 Haemoglobin and the transport of oxygen	1298		
	Concept review	1300		
	Key equations	1301		
	Questions	1301		
			Appendices	
			Appendix 1	Abbreviations and symbols for quantities and units 1331
			Appendix 2	Representing reactions 1335
			Appendix 3	Preparation and reactions of alcohols and amines 1336
			Appendix 4	Organic oxidation and reduction reactions 1338
			Appendix 5	Properties of the elements 1340
			Appendix 6	Electronic configurations of the elements and some important ions 1348
			Appendix 7	Thermodynamic data for organic and inorganic compounds 1352
			Appendix 8	Ionic, atomic, and van der Waals radii for selected elements 1363
			Appendix 9	Acidity constants 1366
			Appendix 10	Bond lengths and bond enthalpies 1368
			Appendix 11	The electromagnetic spectrum 1371
			Answers	1372
			Index	1385
			Figure acknowledgements	1406
			The Greek alphabet	1410
			SI multiplication prefixes	1410
			Physical constants	1410
