

TABLE OF CONTENTS

MOTIVATION AND INTRODUCTION	5
1.1 Background.....	5
1.2 Problem formulation	5
1.3 Literature review.....	5
ARTERIAL HISTOLOGY AND MECHANICAL BEHAVIOR	6
2.1 Arterial histology	6
2.2 Typical mechanical behavior of the arterial wall	7
EXPERIMENTAL STUDY OF MECHANICAL PROPERTIES OF AORTIC TISSUE.....	7
3.1 Biaxial testing rig and type of tests	7
3.2 Specimen preparation.....	8
3.3 Ultimate tensile stress measurement.....	8
3.4 Artery wall behavior of non-separated artery	8
3.5 Experimental results of testing under influence of various factors.....	8
CONSTITUTIVE MODELS OF THE ARTERIAL WALL	10
4.1 Constitutive relations	10
4.2 Overview of frequent types of strain energy density functions	11
4.3 Identification of parameters from experimental data	13
FINITE ELEMENT MODELING - FEA modeling	14
5.1 General assumptions for FEA modeling.....	14
5.2 Parameters of the AAA model (AAA properties).....	15
5.3 Hypothetical idealised geometrical aneurysm model.....	17
5.4 Aneurysm model based on the patient-specific CTA data	20
5.5 Simulation of hypertension	23
GENERAL DISCUSSION	26
6.1 Conclusion and future work	26
6.2 Scope and limitations	28
6.3 Clinical perspectives	28
REFERENCES.....	28
AUTHOR'S PUBLICATIONS.....	30
AUTHOR'S CURRICULUM VITAE.....	31
0 ABSTRACT.....	32
