List of Tables	xiii
1 Introduction to karst	1
1.1 Definitions	1
1.2 The global distribution of karst	4
1.3 The growth of ideas	6
2 The karst rocks	10
2.1 Carbonate rocks and minerals	10
2.2 Limestone compositions and depositional facies	14
2.3 Diagenesis and metamorphism of limestones; formation of dolomite	20
2.4 The evaporite rocks	27
2.5 Quartzites and siliceous sandstones	29
2.6 Effects of lithologic properties upon karst development	30
2.7 Interbedded clastic rocks	34
2.8 Bedding planes, joints, faults and fracture traces	35
2.9 Fold topography	41
3 Dissolution chemical and kinetic behaviour of the karst rocks	42
3.1 Introduction	42
3.2 Aqueous solutions and chemical equilibria	46
3.3 The dissolution of anhydrite, gypsum and salt	51
3.4 Bicarbonate equilibria and the solution of carbonate rocks	53
3.5 Measurements in the field and lab; computer programs	60
3.6 Chemical complications in carbonate solution	62
3.7 Two examples of the chemical evolution of simple calcium carbonate solutions	79
3.8 Dissolution and precipitation kinetics of the karst rocks	81

4	Distribution and rate of karst denudation	96
4.1	Global variations in the solution of carbonate terrains	96
4.2	Measurement and calculation of solution rates	104
4.3	Solution rates in non-carbonate rocks	114
4.4	Interpretation of measurements	115
5	Karst hydrology	127
5.1	Basic hydrological concepts, terms and definitions	127
5.2	Applicability of Darcy's law to karst	142
5.3	Controls on the development of karst aquifers	148
5.4	Energy supply for karst aquifer development	162
5.5	The rate of development of flow paths	165
5.6	Classification and characteristics of karst aquifers	166
6	Analysis of karst drainage systems	171
6.1	The 'grey box' nature of karst	171
6.2	Exploration and survey techniques	173
6.3	Aquifer zonation and thickness	177
6.4	Borehole analysis	178
6.5	Spring hydrograph analysis	193
6.6	Spring chemograph interpretation	204
6.7	Interpretation of the degree of organization of a karst aquifer	210
6.8	Polje hydrograph analysis	214
6.9	Water balance estimation	218
6.10	Water tracing techniques	219
7	Cave systems	242
7.1	Classifying cave systems	242
7.2	Formation of plan patterns of common caves	249
7.3	The common cave systems in depth	261
7.4	System modifications occurring within a single phase	271
7.5	Multi-phase cave systems	274
7.6	Meteoric water caves developed where there is confined circulation or basal injection of water	278
7.7	Hypogene caves A. Hydrothermal caves associated with CO ₂	282

7.8	Hypogene caves B. Caves formed by waters containing H ₂ S	287
7.9	Sea coast mixing zone cavities	290
7.10	Massive sulphide deposits in karst cavities	291
7.11	Passage cross-sections and smaller features of erosional morphology	294
7.12	Breakdown in caves	309
8	Cave interior deposits	316
8.1	Introduction	316
8.2	Clastic sediments	318
8.3	Calcite, aragonite and other carbonate precipitates	330
8.4	Other cave minerals	347
8.5	Ice in caves	351
8.6	Dating and paleo-environmental analysis of calcite speleothems and other interior deposits	355
8.7	Mass flux through a cave system; the example of Friars Hole, W. Virginia	372
9	Karst landform development in humid regions	374
9.1	Coupled hydrological and geochemical systems	374
9.2	Small scale solution sculpture	375
9.3	Dolines – the ‘diagnostic’ karst landform?	396
9.4	The origin and development of solution dolines	399
9.5	The origin of collapse and subsidence depressions	405
9.6	Morphometric analysis of dolines	413
9.7	Landforms associated with allogenic inputs	423
9.8	Karst poljes	428
9.9	Corrosional plains and shifts in baselevel	432
9.10	Residual hills on karst plains	440
9.11	Depositional and constructional karst features	448
9.12	Sequences of carbonate karst evolution in humid terrains	451
9.13	Special features of evaporite terrains	458
10	The influence of climate, climatic change and other environmental factors on karst development	466
10.1	The precepts of climatic geomorphology	466

10.2	The hot arid extreme	467
10.3	The cold extreme: 1 karst development in glaciated terrains	472
10.4	The cold extreme: 2 karst development in permafrozen terrains	489
10.5	Sea level changes, tectonic movement and implications for the development of coastal karst	496
10.6	Polycyclic and polygenetic karsts	506
10.7	Relict karsts and paleokarsts	507
11	Karst resources, their exploitation and management	513
11.1	Karst hydrogeological mapping and water resources assessment	513
11.2	Pollution of karst aquifers	518
11.3	Problems of construction on and in karst rocks – expect the unexpected!	521
11.4	Urban hydrology of karst	537
11.5	Industrial exploitation of karst rocks and minerals	538
11.6	Recreational and scientific values of karstlands	543
